

CLASSROOM CONTACT PROGRAMME

(ACADEMIC SESSION 2018-2019)

PRE-MEDICAL : NURTURE COURSE [PHASE-I, II & III]

TEST # 14

DATE : 20-01-2019

Test Type : Minor

Test Pattern : NEET

INSTRUCTIONS

Do not open this Test Booklet until you are asked to do so

1. Immediately fill in the form number on this page of the Test Booklet with Blue/Black Ball Point Pen. Use of pencil is strictly prohibited.
2. The candidates should not write their Form Number anywhere else (except in the specified space) on the Test Booklet/Answer Sheet.
3. The test is of **3 hours** duration.
4. The Test Booklet consists of **180** questions. The maximum marks are **720**.
5. There are **three** parts in the question paper A,B,C consisting of **Physics, Chemistry** and **Biology** having **45 questions** each in Physics & Chemistry and **90 questions** in Biology part of equal weightage. Each question is allotted 4 (four) marks for **correct** response.
6. **One Fourth** mark will be deducted for indicated incorrect response of each question. **No deduction** from the total score will be made if no response is indicated for an item in the Answer Sheet.
7. Use **Blue/Black Ball Point Pen only** for writing particulars/markings responses on **Side-1** the Answer Sheet. **Use of pencil is strictly prohibited.**
8. No candidate is allowed to carry any textual material, printed or written, bits of papers, pager, mobile phone any electronic device etc, except the Identity Card inside the examination hall/room.
9. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
10. On completion of the test, the candidate must hand over the Answer Sheet to the invigilator on duty in the Room/Hall. **However, the candidate are allowed to take away this Test Booklet with them.**
11. **Do not fold or make any stray marks on the Answer Sheet.**

Your Target is to secure Good Rank in NEET 2020

MINOR TEST # 14

Topics

DATE : 20 - 01 - 2019

PRE-MEDICAL NURTURE COURSE [PHASE-I, II & III] : [NEET]

PHYSICS : Elasticity, Thermal Physics, Work, Power and Energy

CHEMISTRY : IUPAC Nomenclature, Isomerism, (Except Tautomerism)

BIOLOGY : Plant Growth and Development, Respiration in Plant, Locomotion and Movement,
Nervous System (Upto Brain Ventricles)

SPACE FOR ROUGH WORK

HAVE CONTROL → HAVE PATIENCE → HAVE CONFIDENCE ⇒ 100% SUCCESS

BEWARE OF NEGATIVE MARKING

- The displacement x of a particle moving in one dimension under the action of a constant force is related to the time t by equation $t = \sqrt{x} + 3$, where x is in meters and t is in seconds. The work done by the force in first 6 seconds is :-
(1) 9 J (2) 6 J (3) 3 J (4) 0 J
- The potential energy of a particle varies according to the graph shown. Force acting on it varies according to which of the following graphs :-

- The potential energy function for a conservative force is given by $U = \beta(2x+4y)$. The work done by the conservative force in displacing a particle from point $P(1,2)$ to $Q(3,5)$ is equal to :-
(1) -10β (2) $+16\beta$
(3) -16β (4) 10β
- Calculate amount of heat (in calorie) require to convert 5 gm ice 0°C to steam 100°C :-
(1) 3100 (2) 3200
(3) 3600 (4) 4200
- A massless platform is kept on a light elastic spring, as shown in the figure. When sand particle of 0.1 kg mass are dropped on the pan, from a height of 0.24 m the particle strikes the pan and spring is compressed by 0.01 m. From what height should the particle be dropped to cause a compression of 0.04 m ?

- (1) 0.96 m (2) 2.96 m
(3) 3.96 m (4) 0.48 m

SPACE FOR ROUGH WORK

6. A pumps on the ground floor of a building can pump up water to fill a tank of volume 30 m^3 in 15 minutes. If the tank is 40 m above the ground and efficiency of the pump is 30%, how much electric power is consumed by pump ?

(1) 13.6 KW (2) 23.6 KW
(3) 43.6 KW (4) 73.6 KW

7. Two bars of thermal conductivities K and $3K$ and lengths 1cm and 2cm respectively have equal cross-sectional area, they are joined lengths wise as a shown in the figure. If the temperature at the ends of this composite bar is 0°C and 100°C respectively (see figure), then the temperature ϕ of the interface is :-

(1) 50°C (2) $\frac{100}{3}^\circ\text{C}$
(3) 60°C (4) $\frac{200}{3}^\circ\text{C}$

8. Two rods (one semi-circular and other straight) of same material and of same cross-sectional area are joined as shown in the figure. The points A and B are maintained at different temperature. Find the ratio of the heat transferred by conduction through a cross-section of a semi-circular rod to the heat transferred through a cross section of the straight rod in a given time.

(1) $\frac{2}{\pi}$ (2) $\frac{1}{\pi}$
(3) π (4) $\frac{\pi}{2}$

9. The heat is flowing through two cylindrical rods of same material. The radius of the rods are in the ratio 1 : 2 and their lengths are in the ratio 2 : 1. If the temperature difference between their ends is the same, the ratio of rates of flow of heat through them will be :-

(1) 1 : 1 (2) 2 : 1
(3) 1 : 4 (4) 1 : 8

10. Three rods made of the same material and having the same cross section have been joined as shown in the figure. Each rod is of the same length. The left and right ends are kept at 0°C and 120°C respectively. The temperature of the junction of the three rods will be :-

(1) 45°C (2) 60°C
(3) 80°C (4) 20°C

SPACE FOR ROUGH WORK

11. The rectangular surface of area $8 \text{ cm} \times 4 \text{ cm}$ of a black body at temperature 127°C emits energy E per second. If length and breadth are reduced to half of the initial value and the temperature is raised to 327°C , the new emission of energy per second becomes :-

- (1) $\frac{3}{8}E$ (2) $\frac{81}{16}E$
(3) $\frac{9}{16}E$ (4) $\frac{81}{64}E$

12. It takes 10 minutes to cool a liquid from 61°C to 59°C . If room temperature is 30°C then find the time taken in cooling from 51°C to 49°C .

- (1) 15 min (2) 12 min
(3) 18 min (4) 20 min

13. The radiation emitted by a star A is 10000 times that of the sun. If the surface temperatures of the sun and star A are 6000 K and 2000 K respectively, the ratio of the radii of the star A and the sun is:-

- (1) $300 : 1$ (2) $600 : 1$
(3) $900 : 1$ (4) $1200 : 1$

14. A bimetallic strip consists of metals X and Y. It is mounted rigidly at the base as shown. The metal X has a higher coefficient of expansion compared to that for metal Y. When bimetallic strip is placed in a cold bath:-

- (1) it will bend towards the right
(2) it will not bend but shrink
(3) it will bend towards the left
(4) it will neither bend nor shrink

15. The plots of intensity versus wavelength for three black bodies at temperatures T_1 , T_2 and T_3 respectively are as shown. Their temperature are such that :-

- (1) $T_1 > T_2 > T_3$
(2) $T_1 > T_3 > T_2$
(3) $T_2 > T_3 > T_1$
(4) $T_3 > T_2 > T_1$

SPACE FOR ROUGH WORK

16. A composite bar of length $L = L_1 + L_2$ is made up from a rod of material 1 and of length L_1 attached to a rod of material 2 and of length L_2 as shown. If α_1 and α_2 are their respective coefficients to linear expansion, then equivalent coefficient of linear expansion for the composite rod is :-

- (1) $\frac{\alpha_1 L_2 + \alpha_2 L_1}{L}$ (2) $\frac{\alpha_1 L_2 + \alpha_2 L_2}{L}$
- (3) $\frac{\alpha_1 L_1 + \alpha_2 L_2}{L}$ (4) $\frac{\alpha_1 \alpha_2 (L_1^2 + L_2^2)}{(\alpha_1 L_1 + \alpha_2 L_2)}$
17. The length of two metallic rods at temperatures θ are L_A and L_B and their linear coefficient of expansion are α_A and α_B respectively. If the difference in their lengths is to remain constant at any temperature then :-
- (1) $L_A/L_B = \alpha_A/\alpha_B$
 (2) $L_A/L_B = \alpha_B/\alpha_A$
 (3) $\alpha_A = \alpha_B$
 (4) $\alpha_A/\alpha_B = 1$
18. Two rods of same material have same length and area. The heat ΔQ flows through them for 12 minutes when they are joined side by side(series). If now both the rods are joined in parallel, then the same amount of heat ΔQ will flow in :-
- (1) 24 min
 (2) 3 min
 (3) 12 min
 (4) 6 min

19. Two spheres A and B having radii of 3 cm and 5 cm respectively are coated with carbon black on their outer surfaces. The wavelengths of radiations corresponding to maximum intensity of emission are 300 nm and 500 nm respectively. The respective powers radiated by them are in the ratio of :-

- (1) $\sqrt{\frac{5}{3}}$ (2) $\frac{5}{3}$
- (3) $\left(\frac{5}{3}\right)^2$ (4) $\left(\frac{5}{3}\right)^4$

20. A body initially at 80°C cools to 64°C in 5 min and 64°C to 52°C in 5 min. The temperature of the surrounding is :-
- (1) 26°C
 (2) 16°C
 (3) 36°C
 (4) None of these
21. A force $F = (10 + 0.5x)$ N act on a particle of mass 2kg in x-direction then work done by this force in displacement from $x = 0$ to $x = 2\text{m}$ is given by :-
- (1) 20 J (2) 10 J
 (3) 21 J (4) 22 J
22. The potential energy of a particle in conservative force field is given by $U = ax^2 - bx$, where a and b are constant, then equilibrium is :-
- (1) Stable
 (2) Unstable
 (3) Neutral
 (4) None of these

SPACE FOR ROUGH WORK

|---|---|
| <p>23. A pendulum bob has a speed of 3 m/s while passing through its lowest position then its speed when it makes an angle of 60° with vertical is given by (Length of pendulum is 0.5 m, take $g = 10 \text{ m/s}^2$) :-
 (1) 1 m/s (2) 3 m/s
 (3) 2 m/s (4) 4 m/s</p> <p>24. The force required to tow a boat at constant velocity is proportional to speed. If a speed of 4 km/h requires 7.5 kw power, how much power does a speed of 12 km/h require :-
 (1) 22.5 kw (2) 67.5 kw
 (3) 45.0 kw (4) 12.5 kw</p> <p>25. A uniform chain of length 2 m is kept on a friction less table such that a length of 60 cm hangs freely below the edge of table. The total mass of chain is 4kg. What is the work done in pulling the hanging part of chain on the table :-
 (1) 3.6 J (2) 7.2 J
 (3) 10.8 J (4) 14.4 J</p> <p>26. A spring with force constant k, when compressed by x cm, the potential energy stored in it is U. If it is further compressed by 3x, then change in potential energy of spring is :-
 (1) 8 U (2) 9 U
 (3) 15 U (4) 16 U</p> <p>27. A pump motor is used to deliver water at a certain rate from a given pipe. To obtain 'n' times water from the same pipe in same time, by what amount the power of motor should be increased ?
 (1) n^2 times (2) n^3 times
 (3) n times (4) $n^{1/2}$ times</p> | <p>28. When conservative force does positive work on a system then potential energy of system :-
 (1) Increases
 (2) Decreases
 (3) Remains same
 (4) First increases then decreases</p> <p>29. The pressure P and volume V of a gas are related as $PV^{3/2} = K$ where, K is a constant. The percentage increase in the pressure for a decrease of 0.5% of the volume is :-
 (1) 0.25% (2) 0.75%
 (3) 1.50% (4) 0.30%</p> <p>30. The freezing point on a new thermometer is marked as 20° and the boiling point as 150°. A temperature of 60°C on this thermometer will be read as :-
 (1) 40° (2) 65°
 (3) 98° (4) 110°</p> <p>31. A vessel has 6 g of hydrogen at pressure P and T emperature 500 K. A small hole is made in it so that hydrogen leaks out. How much hydrogen leaks out if the final pressure is P/2 and temperature falls to 300 K?
 (1) 5 g (2) 3 g
 (3) 4 g (4) 1 g</p> <p>32. 10 gm of ice at -20°C is added to 10 gm of water at 50°C. Specific heat of water = 1 cal/gm-$^\circ\text{C}$, specific heat of ice = 0.5 cal/gm-$^\circ\text{C}$. Latent heat of ice = 80 cal/gm. Then, resulting temperature is :-
 (1) -20°C (2) 15°C
 (3) 0°C (4) 50°C</p> |
|---|---|

SPACE FOR ROUGH WORK

33. 10 gm of ice at -20°C is dropped into a calorimeter containing 10 gm of water at 10°C ; the specific heat of water is twice that of ice. When equilibrium is reached, the calorimeter will contain :-

- (1) 20 gm of water
- (2) 20 gm of ice
- (3) 10 gm ice and 10 gm water
- (4) 5 gm ice and 15 gm water

34. 5 gm of steam at 100°C is passed into 6 gm of ice at 0°C . If the latent heats of steam and ice in cal per gm are 540 and 80 respectively, then the final temperature is :-

- (1) 0°C (2) 100°C
- (3) 50°C (4) 30°C

35. Two liquids A and B are at temperature 75°C and 15°C . Their masses are in the ratio of 2 : 3 and their specific heats in the ratio 3 : 4. What is the resulting temperature ?

- (1) 90°C (2) 70°C
- (3) 35°C (4) 60°C

36. If the height of Niagra fall is 50 m, the difference between the temperatures of water at the top and the bottom of the fall is :-

- (1) 117°C (2) 11.7°C
- (3) 1.17°C (4) 0.117°C

37. A block of ice at -10°C is slowly heated and converted to steam at 100°C . Which of the following curves represents this phenomenon qualitatively ?

38. A solid material is supplied with heat at constant rate and the temperature of the material changes as shown below. From the graph, the false conclusion drawn is :-

- (1) AB and CD of the graph represent phase changes
- (2) AB represent the change of state from solid to liquid
- (3) latent heat of fusion is twice the latent heat of vaporization
- (4) CD represents the change of state from liquid to gas

SPACE FOR ROUGH WORK

39. The ratio of densities of two substances is 2 : 3 and their specific heats are in the ratio 3 : 4. The ratio of their thermal capacities for unit volume is :-
 (1) 1 : 1 (2) 1 : 2
 (3) 2 : 1 (4) 8 : 9
40. How many gm of ice at -14°C are needed to cool 200 gm of water from 25°C to 10°C ?
 (1) 21 gm (2) 31 gm
 (3) 41 gm (4) 51 gm
41. An ideal gas having molar specific heat capacity at constant volume is $\frac{3}{2}R$, the molar specific heat capacities at constant pressure is :-
 (1) $\frac{1}{2}R$ (2) $\frac{5}{2}R$
 (3) $\frac{7}{2}R$ (4) $\frac{9}{2}R$
42. The isothermal diagram of a gas at three different temperatures T_1 , T_2 and T_3 , is shown in the given figure. Then :-

- (1) $T_1 < T_2 < T_3$ (2) $T_1 < T_2 > T_3$
 (3) $T_1 > T_2 > T_3$ (4) $T_1 > T_2 < T_3$

43. 0.014 kg of nitrogen is enclosed in a vessel at a temperature of 27°C . How much should be the temperature of the gas to double the rms velocity of its molecules ?
 (1) 1200 K (2) 600 K
 (3) 300 K (4) 150 K
44. 1 mole of a gas with $\gamma = \frac{7}{5}$ is mixed with 1 mole of gas with $\gamma = \frac{5}{3}$, the value of γ of the resulting mixture is :-
 (1) $\frac{7}{5}$ (2) $\frac{2}{5}$
 (3) $\frac{3}{2}$ (4) $\frac{12}{7}$
45. As shown in figure, initially spring is unstretched. When the system is released from rest then maximum elongation is given by:-

- (1) $\frac{mg}{k}$
 (2) $\frac{mg}{2k}$
 (3) $\frac{mg}{3k}$
 (4) $\frac{2mg}{k}$

SPACE FOR ROUGH WORK

46. How many 2° Hydrogen atoms are present in the given following compound ?

- (1) 2 (2) 5 (3) 7 (4) 8

47. Identify which functional group is Not present in the given following compound ?

- (1) Ketone (2) Ester
(3) Amide (4) Ether

48. How many degrees of unsaturation are present in the following compound ?

- (1) 6 (2) 7
(3) 10 (4) 11

49. Which of the following compounds contain at least one secondary alcohol ?

- (1) I, II, IV, VI (2) I, III
(3) I, II, III, V (4) I, III, V

50. How many secondary carbon and secondary hydrogen atoms are present in the molecule given below respectively ?

- (1) 2, 3 (2) 2, 2
(3) 3, 3 (4) 2, 0

51.

Total number of substituent present in the above compound :-

- (1) 1 (2) 2 (3) 3 (4) 4

52. IUPAC name will be :

- (1) Hex-5-en-1-yne (2) Hex-1-en-5-yne
(3) Hex-6-en-1-yne (4) Hex-1-en-6-yne

53. The IUPAC name of

- (1) But-1-en-4-oic acid
(2) 1-hydroxybut-2-en-1-one
(3) But-2-en-1-oic acid
(4) But-2-en-4-oic acid

54. The IUPAC name of is :-

- (1) Butane-1, 4-dicarbonitrile
(2) Ethane-1, 2-dicarbonitrile
(3) Ethane-1, 2-dinitrile
(4) Butane-1, 4-dinitrile

SPACE FOR ROUGH WORK

55. The IUPAC name of  is :-

is :-

- (1) 2-Phenylpropan-3-al
- (2) Formylethylbenzene
- (3) 2-Phenylpropanal
- (4) Ethylformylbenzene

56. The IUPAC name of  is :-

- (1) 4-Bromo benzenamine
- (2) 4-Amino-1-bromobenzene
- (3) 4-Bromo benzenamide
- (4) 1-Bromo benzencarboxamide

57. The IUPAC name of  is :-

- (1) 2, 6-Dimethylhepta-2, 5-dienoic acid
- (2) 3, 7-Dimethylhepta-2, 5-dienoic acid
- (3) 1-Hydroxy-2, 6-dimethylhepta-2, 5-dienone
- (4) none of these

58. The IUPAC name of

- (1) 2-Hydroxypentan-4-one
- (2) 4-Hydroxypentan-2-one
- (3) 4-oxopentan-2-ol
- (4) 2-oxopentan-4-ol

59. The IUPAC name of

- (1) 2, 3-Dihydroxy-4-methylpentanal
- (2) 1-oxo-2, 3-Dihydroxy-4-methylpentane
- (3) 2,3-Dihydroxy-4-methylpentanone
- (4) 1,2-Dihydroxy-3-methylbutanecarbaldehyde

60. Which of the following depict the same ?

- (1) 1 and 2
- (2) 1 and 3
- (3) 2 and 3
- (4) 1, 2, and 3

61. The absolute configurations of the two centers in the following molecule are :

- (1) 2(R), 3(S)
- (2) 2(R), 3(R)
- (3) 2(S), 3(S)
- (4) 2(S), 3(R)

62. The most stable conformation of ethylene glycol is :-

- (1) Anti
- (2) Gauche
- (3) Partially eclipsed
- (4) Fully eclipsed

SPACE FOR ROUGH WORK

63. Which is the lowest energy conformation of butane?

64. Which of the following is a meso compound?

How many geometrical isomers are possible for the above compound?

- (1) 0 (2) 2 (3) 3 (4) 4

How many geometrical isomers are possible for the above compound?

- (1) 0 (2) 2 (3) 3 (4) 4

How many geometrical isomers are possible for this compound?

- (1) 2 (2) 3 (3) 4 (4) 6

How many geometrical isomers of this compound are possible?

- (1) 2 (2) 3 (3) 4 (4) 6

69. Which of the following having plane of symmetry?

- (4) All of these

SPACE FOR ROUGH WORK

70. Which of the following pairs of compounds are functional isomers ?

71. The configurations of the carbon atoms C_2 and C_3 in the following compound are respectively

- (1) R, R (2) S, S
(3) R, S (4) S, R

72. The pair of enantiomers among the following compound is :-

- (1) I and IV
(2) II and IV
(3) II and III
(4) I and II

73. In which of the following compound, possess plane of symmetry as well as centre of symmetry?

74. How many chiral centers are present in the following compound ?

- (1) 4 (2) 5 (3) 6 (4) 7

75. 5 volumes of a hydrocarbon on complete combustion consumed 10 volumes of oxygen giving 5 volumes of CO_2 at STP. The hydrocarbon is

- (1) C_2H_6 (2) C_2H_4 (3) CH_4 (4) C_2H_2

76. The volume of water which should be added to 300 ml of 0.5 M NaOH solution so as to get a solution of 0.2 M is:

- (1) 550 ml (2) 350 ml
(3) 750 ml (4) 450 ml

77. Percentage of oxygen in NaOH is

- (1) 40 (2) 16 (3) 8 (4) 1

78. The haemoglobin from the red corpuscles of most mammals contains approximately 3.3% of iron by weight. The physical measurement indicates the molecular weight of haemoglobin 7000. The number of iron atoms in each molecule of haemoglobin is (At. wt. of Fe = 56)

- (1) 2 (2) 3 (3) 4 (4) None

SPACE FOR ROUGH WORK

79. Molecular weight of a gas, 11.2 litre of which at NTP weighs 14 g is
(1) 14 (2) 28
(3) 11/11.2 (4) 14×11.2
80. The empirical formula of a compound is CH . Its molecular weight is 78. The molecular formula of the compound will be
(1) C_2H_4 (2) C_3H_3 (3) C_4H_4 (4) C_6H_6
81. In the following reaction, correct statement is
 $\text{K}_2\text{Cr}_2\text{O}_7 + 8\text{H}^+ + 3\text{S}_2\text{O}_3 \longrightarrow 2\text{Cr}^{3+} + \text{K}_2\text{SO}_4 + 3\text{S} + 4\text{H}_2\text{O}$
(1) Equivalent weight of $\text{K}_2\text{Cr}_2\text{O}_7 = \frac{\text{Molar wt}}{3}$
(2) Equivalent weight of $\text{K}_2\text{Cr}_2\text{O}_7 = \text{Molar wt.}$
(3) Equivalent weight of $\text{K}_2\text{Cr}_2\text{O}_7 = \frac{\text{Molar wt.}}{5}$
(4) Equivalent weight of $\text{K}_2\text{Cr}_2\text{O}_7 = \frac{\text{Molar wt.}}{6}$
82. What is the minimum molecular weight of an organic compound containing 2% carbon by weight?
(1) 200 g (2) 400 g (3) 600 g (4) 800 g
83. A, B and C are three elements forming a part of compound in oxidation state of +2, +5 and -2 respectively. The compound is
(1) $\text{A}_3(\text{BC}_4)_2$ (2) ABC_2
(3) $\text{A}_3(\text{BC}_3)_2$ (4) $\text{A}_2\text{B}_2\text{C}_3$
84. The compound which act as oxidising agent as well as reducing agent?
(1) H_2S (2) H_2SO_3
(3) H_2SO_4 (4) All of these
85. $\text{FeCl}_3 + \text{H}_2\text{S} \rightarrow \text{FeCl}_2 + \text{S} + \text{HCl}$
In above reaction
(1) FeCl_3 act as reducing agent
(2) H_2S act as oxidising agent
(3) H_2S act as reducing agent
(4) Both act as reducing agent
86. $\text{As}_2\text{S}_3 + \text{HNO}_3 \rightarrow \text{H}_3\text{AsO}_4 + \text{H}_2\text{SO}_4 + \text{NO}$.
The equivalent weight of As_2S_3 is
(1) $\frac{M}{8}$ (2) $\frac{M}{24}$ (3) $\frac{M}{3}$ (4) $\frac{M}{28}$
87. Oxidation number of nitrogen in HNC is
(1) -3 (2) +3 (3) 2 (4) -2
88. 1 mole FeC_2O_4 is titrated with KMnO_4 in acidic medium. The number of mole of KMnO_4 required
(1) 1 (2) 2 (3) 1.67 (4) 0.6
89. Among the following, identify the species with an atom in +6 oxidation state
(1) CrO_2Cl_2 (2) MnO_4^-
(3) Cl_2O_7 (4) I_3^-
90. Number of functional groups are present in the given compound :-

(1) 6 (2) 4 (3) 5 (4) 7

SPACE FOR ROUGH WORK

91. Which of the following phosphorylation occur during cellular respiration?
- Photo phosphorylation
 - Substrate level phosphorylation
 - Oxidative phosphorylation
 - Both (2) and (3)
92. Interruption of dark period by flash of light prevent flowering in :-
- Short day plant
 - Long day plant
 - Day neutral plant
 - Both (2) and (3)
93. Glycolysis shows partial oxidation of hexose sugar, choose the incorrect statement not associated with this process.
- Break down of C-C bonds
 - Sequence of 10 enzymatic reactions
 - Utilization of O_2 molecules
 - Both reversible and irreversible steps
94. In alcoholic fermentation, by yeast pyruvic acid is converted to ethanol and CO_2 with the help of enzyme
- Alcohol dehydrogenase
 - Pyruvate decarboxylase
 - Pyruvate dehydrogenase
- Only (A)
 - Only (B)
 - Both (A) and (B)
 - Both (A) and (C)
95. A - Lactic acid fermentation is performed by lactic acid bacteria during conversion of milk to curd.
- B - The reducing agent $NADH_2$ is reoxidised to NAD^+ in this process.

- Both are correct
 - Only A is correct
 - Both are incorrect
 - Only B is correct
96. Identify the product A, B, C and D and find out incorrect option.

- A - Pyruvic acid
 - B - CO_2 + Water
 - C - Lactic acid + CO_2
 - D - Ethanol + CO_2
97. Which of the given reaction does not involve decarboxylation?
- Pyruvate - Acetyl CoA
 - Oxalosuccinate - α -Ketoglutarate
 - α -Ketoglutarate - Succinyl CoA
 - Cisaconitate - Isocitrate
98. Which of the following complexes are involved in $NADH_2$ and $FADH_2$ oxidation through ETS respectively?
- I, II
 - II, I
 - II, III
 - I, III
99. Which of the following set is a synthetic PGRs?
- Kinetin, 2,4-D, NAA
 - Zeatin, IAA, IBA
 - IAA, GA_3 , Ethylene
 - Zeatin, ABA, IAA

100. Give the order in which electron movement occur in mitochondrial ETS?

- (1) Cyt b – Cyt c_1 – Cyt c – Cyt a – Cyt a_3
- (2) Cyt a – Cyt a_3 – Cyt b – Cyt c
- (3) FMN – Cyt a_3 – Cyt c_1 – Cyt c
- (4) FMN – FeS – Cyt c – Cyt a_3

101. Pyruvic acid produced by glycolysis is oxidised into Acetyl CoA. This reaction is called as

- (1) Oxidative dehydrogenation
- (2) Oxidative decarboxylation
- (3) Oxidative phosphorylation
- (4) Oxidative carboxylation

102. Complimentary and antagonistic role of auxins and cytokinins are seen respectively in case of :-

- (1) Apical dominance and morphogenesis
- (2) Callus formation and apical dominance
- (3) Sex expression and cell growth
- (4) Apical dominance and senescence

103. Cytochrome c is a small protein found attached to outer surface of inner mitochondrial membrane. It is a mobile electron carrier that transfer electron between

- (1) Complex I and II
- (2) Complex II and III
- (3) Complex III and IV
- (4) Complex IV and V

104. Bacteria and cyanobacteria lack

- (1) Glycolysis
- (2) TCA cycle
- (3) ETS
- (4) Glycerol-3 phosphate shuttle

105. Match the coloumn and select the correct option :-

Coloumn-I (Hormone)		Coloumn-II (Function)	
a	Cytokinin	I	Senesecence
b	Ethylene	II	Seed development
c	ABA	III	Cell growth
d	Auxin	IV	Helpful in shoot and root formation

(1) a-III, b-I, c-II, d-IV

(2) a-I, b-II, c-III, d-IV

(3) a-II, b-I, c-III, d-IV

(4) a-III, b-I, c-IV, d-II

106. Link reaction of aerobic respiration

- (1) Require pyruvate dehydrogenase enzyme complex
- (2) Represents oxidative decarboxylation of pyruvic acid
- (3) Is possible in presence of TPP, NAD^+ , Mg^{++}
- (4) More than one option is correct

107. The RQ of a respiratory substrate depends upon

- (1) Nature of respiratory substrate
- (2) Amount of oxygen present in respiratory substrate
- (3) The extent upto which substrate is broken down
- (4) All of these

108. Raw material for synthesis of chlorophyll and cytochrome is

- (1) Acetyl CoA
- (2) Succinyl CoA
- (3) OAA
- (4) α -Ketoglutaric acid

109. RQ is less than one if respiratory substrate is

- (1) Glucose and fructose
- (2) Protein and fat
- (3) Glucose and organic acid
- (4) Organic acids and proteins

110. The rate of respiration increases 2-3 times for every rise of 10°C temperature is called
- Warburg effect
 - Pasteur effect
 - Vant Hoff law
 - Blackman law
111. Read the following statements (A-E) and choose the suitable option w.r.t. Kreb's cycle.
- The first product of Kreb's cycle is 6C compound formed by condensation
 - Kreb's cycle involves five oxidation and 2 decarboxylation process
 - A single turn of Kreb's cycle produces 12 ATP
 - During the conversion of α -Ketoglutarate to succinyl CoA molecule of GTP is synthesized
 - Acetyl CoA, a high energy compound act as substrate entrant for the cycle
- How many statements are correct?
- Two
 - Three
 - One
 - Five
112. Fatty acid and glycerol can enter aerobic respiratory pathway after being converted to A and B respectively
- | A | B |
|----------------|--------------|
| (1) Acetyl CoA | DHAP |
| (2) DHAP | Pyruvic acid |
| (3) PGAL | Acetyl CoA |
| (4) PEP | DHAP |
113. The over all goal of glycolysis, Kreb's cycle and the electron transport system is the formation of
- Nucleic acids
 - ATP in small step-wise units
 - ATP in one large oxidation reaction
 - Sugars
114. The chemiosmotic coupling hypothesis of oxidative phosphorylation proposes that adenosine triphosphate (ATP) is formed because
- A proton gradient forms across the inner membrane.
 - There is a change in the permeability of the inner mitochondrial membrane toward adenosine diphosphate (ADP).
 - High energy bonds are formed in mitochondrial proteins.
 - ADP is pumped out of the matrix into the intermembrane space.
115. Which statement is wrong for Kreb's cycle?
- There is one point in the cycle where FAD^+ is reduced to FADH_2
 - During conversion of succinyl CoA to succinic acid, a molecule of GTP is synthesised
 - The cycle starts with condensation of acetyl group (acetyl CoA) with pyruvic acid to yield citric acid
 - There are three points in the cycle where NAD^+ is reduced to $\text{NADH} + \text{H}^+$
116. Intrinsic factors, which control the development in plant include
- Only intracellular factors
 - Only intercellular factors
 - Intracellular factors and plant growth regulators
 - Genetic factors and light temperature water oxygen, nutrition etc.

117. Elongation of root at constant rate is

(1) Arithmetic growth; S-curve;

$$L_0 = L_t + rt$$

(2) Arithmetic growth; Linear curve;

$$L_t = L_0 + rt$$

(3) Exponential growth; S-curve;

$$W = W_0 e^{rt}$$

(4) Exponential growth; Linear curve;

$$W_0 = W_1 e^{rt}$$

118. Which of the following statement is not related with the given curve?

(1) Sigmoid growth curve

(2) $W_1 = W_0 e^{rt}$

(3) Arithmetic growth

(4) Unicellular microorganism show this pattern

119. Senescence is

(1) Terminal irreversible phase of ageing

(2) Deteriorative processes in mature plant

(3) A period between complete maturity and final death of an organ

(4) All of these

120. Skoog and Miller's effect is the role of kinetin in

(1) Delaying senescence

(2) Flowering in pineapple

(3) Morphogeneses

(4) Stomatal opening

121. Thinning of cotton, cherry and walnut is done by

(1) ABA

(2) GA

(3) Gaseous hormone

(4) IBA

122. Which plant hormone prevent fruit and leaf drop in early stages but promote abscission of old and mature leaves as well as fruits?

(1) Auxin

(2) Ethylene

(3) Cytokinin

(4) Absciscic acid

123. Find incorrect match w.r.t. role of PGRs.

(1) Seasonal activity of cambium - Auxin

(2) Apical hook formation - Ethylene

(3) Bolting - Cytokinin

(4) Increase sugar cane yield - Gibberellin

124. Which of the following plants material is widely used in preparation of culture medium?

(1) *Pinus* seeds

(2) Coconut milk

(3) *Cycas revoluta* starch

(4) Cabbage leaves

125. Select the incorrect match w.r.t. precursor of PGRs.

(1) ABA - Carotenoid derivative

(2) IAA - Tryptophan

(3) GA - Purine derivative

(4) C_2H_4 - Methionine

126. Choose the odd one out w.r.t. auxin.

(1) It is indole-3 acetic acid

(2) Avena curvature test is the bioassay of auxin

(3) Induce horizontal growth of seedling

(4) Synthetic auxins are widely used as weedicide

- | | |
|--|--|
| <p>127. Which of the following PGR is not present naturally in plants?</p> <ol style="list-style-type: none"> (1) Kinetin (2) Gibberellin (3) Zeatin (4) Auxin <p>128. In tea plantation and Hedge making decapitation results into</p> <ol style="list-style-type: none"> (1) Inhibition of axillary bud (2) Rosette habit (3) Petiole elongation (4) Growth of axillary bud <p>129. <i>Ethephon</i> is used for</p> <ol style="list-style-type: none"> (1) Hastens fruit ripening in apples (2) Initiating germination in peanut seeds (3) Rapid internode elongation in deep water rice plant (4) All of these are correct <p>130. The term bioassay implies</p> <ol style="list-style-type: none"> (1) Description of useful plant part (2) Description of microorganism (3) Using living organism in testing the biologically active chemicals especially hormones (4) Writing an essay on living organisms <p>131. Ethylene is known to carry out all these functions, except</p> <ol style="list-style-type: none"> (1) Germination in peanut seeds (2) Apical hook formation in dicot seedling (3) Increase resistance to low and high temperature (4) Rapid internode elongation in deep water rice plant | <p>132. Which of the following is not a physiological effect of auxin?</p> <ol style="list-style-type: none"> (1) Prevent fruit and leaf drop at early stages (2) Promote abscission of older leaves and fruits (3) Induce parthenocarpy in tomatoes (4) Promote flowering in some long day plant under short day condition <p>133. (4) Undergo spasm</p> <p>149. The process of muscle contraction continues till ____ are pumped back to ____ resulting in the masking of actin filaments which causes the return of 'Z-lines' back to their original position.</p> <p>(1) Calcium ions, sarcosomes
(2) Magnesium ions, sarcosomes
(3) Sodium ions, golgi bodies
(4) Calcium ions, sarcoplasmic reticulum</p> |
|---|---|

150. Which of the following is incorrect regarding the events related to muscle contraction?
- (1) In cori cycle, glucose breaks down into lactic acid in liver.
 - (2) Rigor-mortis is a state of rigidity in dead body due to lack of ATP needed to break actin -myosin bonds
 - (3) During muscle contraction, chemical energy is converted into mechanical energy
 - (4) Contraction of skeletal muscles takes place by sliding of thin filaments over thick filaments
151. Appendicular skeleton is formed by
- (1) Bones of limbs
 - (2) Pelvic girdle
 - (3) Pectoral girdle
 - (4) All of these
152. Scapula is a curved triangular bone present on the dorsal side of thorax between
- (1) 2nd and 9th ribs
 - (2) 2nd and 7th ribs
 - (3) 1st and 8th ribs
 - (4) 3rd and 6th ribs
153. _____ bones of wrist are called carpals.
- (1) 7 (2) 8 (3) 10 (4) 4
154. The part of Scapula with which Clavicle articulates is called
- (1) Coracoid process
 - (2) Odontoid process
 - (3) Olecranon process
 - (4) Acromion process
155. Total number of bones in appendicular skeleton are
- (1) 206 (2) 80
 - (3) 126 (4) 120
156. Which of the following is called hip bone?
- (1) Scapula
 - (2) Innominate
 - (3) Clavicle
 - (4) Femur
157. Acetabulum is a cup-shaped hollow cavity in each coxal bone and is formed by contribution of
- (1) Ilium (2) Ischium
 - (3) Pubis (4) All of these
158. All of the following are tarsal bones of foot except
- (1) Talus (2) Cuboid
 - (3) Cuneiform (4) Pisiform
159. The lower jaw is formed by
- (1) Maxilla (2) Vomer
 - (3) Mandible (4) Zygomatic
160. Which of the following is called cheek bone?
- (1) Maxilla (2) Temporal
 - (3) Zygomatic (4) Mandible
161. The number of Lumbar vertebrae in human body are
- (1) 12 (2) 5
 - (3) 7 (4) 4
162. The immovable joint of skull is called
- (1) Hinge (2) Pivot
 - (3) Suture (4) Amphiarthroses
163. Knee joint and elbow are examples of
- (1) Pivot (2) Ellipsoid
 - (3) Saddle (4) Hinge
164. Which of the following is an example of fibrous joint?
- (1) Elbow
 - (2) Hip joint
 - (3) Joint between Frontal and Parietal
 - (4) Pubic Symphysis
165. In which of the following joint movements are most free and take place in different directions?
- (1) Hinge
 - (2) Pivot
 - (3) Gliding
 - (4) Ball and Socket
166. The threshold stimulus for most excitable cells is
- (1) +30 mV (2) +70 mV
 - (3) -70 mV (4) -55 to -60 mV

167. Influx of sodium ions from extracellular fluid to inside the nerve cell causes
(1) Repolarisation
(2) Depolarisation
(3) Polarisation
(4) Hyperpolarisation
168. Most neurons in cerebral cortex of humans are
(1) Unipolar (2) Bipolar
(3) Apolar (4) Multipolar
169. Mark the odd one w.r.t. origin.
(1) Astrocyte
(2) Microgliocytes
(3) Neuron
(4) Oligodendrocyte
170. Which of the following is the main factor responsible for resting membrane potential?
(1) Presence of more sodium ions inside neuron
(2) Presence of negatively charged proteins outside neuron
(3) Presence of positively charged proteins inside the neuron
(4) More permeability of membrane for potassium ions in resting state
171. In a neuron, potassium ion concentration is
(1) More inside the neuron
(2) More outside the neuron
(3) Equal on both sides of membrane
(4) Less inside the neuron
172. Action potential in a nerve fibre is produced by
(1) Ca^{2+} (2) Na^+
(3) K^+ (4) H^+
173. Saltatory conduction of nerve impulse takes place through
(1) Dendrite
(2) Myelinated axon
(3) Non-myelinated axon
(4) Cyton
174. Which of the following is the direction of nerve impulse in an axon?
(1) Away from the soma
(2) Towards the cell body
(3) Towards the synapse
(4) Both (1) and (3)
175. Bipolar neurons are found in
(1) Dorsal root ganglia of S.C.
(2) Retina
(3) Cerebrum
(4) Cerebellum
176. During a nerve impulse, repolarization occurs due to
(1) Influx of Na^+ (2) Efflux of K^+
(3) Efflux of Cl^- (4) Influx of K^+
177. If both electrodes of cathode ray oscilloscope (CRO) are placed inside an axon, then it shows a membrane potential of ____ in resting state.
(1) -70 mV (2) -55 mV
(3) $+30 \text{ mV}$ (4) 0 mV
178. The most common synapse in our body is
(1) Electrical
(2) Chemical
(3) Both are equally present
(4) None of these
179. In neurons, the ionic gradients across the resting membrane are maintained by the active transport of ions by the sodium-potassium pump which transports
(1) 3 Na^+ inside for 2 K^+ outside the neuron
(2) 3 Na^+ outside for 2 K^+ inside the neuron
(3) 2 Na^+ inside for 3 K^+ outside the neuron
(4) 2 Na^+ outside for 3 K^+ inside the neuron
180. Which of the following is correct option w.r.t. step labelled as A on the given graph?

- (1) Na^+ channels are opened and Na^+ leak out to maintain resting potential
(2) K^+ channels open and efflux of K^+ causes repolarization
(3) Na^+ channels open and influx of Na^+ causes depolarization
(4) Negatively charged proteins inside the neuron are responsible for this
