

CLASSROOM CONTACT PROGRAMME

(ACADEMIC SESSION 2019-2020)

PRE-MEDICAL : ENTHUSIAST COURSE [PHASE-I]

TEST # 01

DATE : 07-04-2019

Test Type : Minor

Test Pattern : NEET

INSTRUCTIONS

Do not open this Test Booklet until you are asked to do so

1. Immediately fill in the form number on this page of the Test Booklet with Blue/Black Ball Point Pen. Use of pencil is strictly prohibited.
2. The candidates should not write their Form Number anywhere else (except in the specified space) on the Test Booklet/Answer Sheet.
3. The test is of **3 hours** duration.
4. The Test Booklet consists of **180** questions. The maximum marks are **720**.
5. There are **three** parts in the question paper A,B,C consisting of **Physics, Chemistry** and **Biology** having **45 questions** each in Physics & Chemistry and **90 questions** in Biology part of equal weightage. Each question is allotted 4 (four) marks for **correct** response.
6. **One Fourth** mark will be deducted for indicated incorrect response of each question. **No deduction** from the total score will be made if no response is indicated for an item in the Answer Sheet.
7. Use **Blue/Black Ball Point Pen only** for writing particulars/markings responses on **Side-1** the Answer Sheet. **Use of pencil is strictly prohibited.**
8. No candidate is allowed to carry any textual material, printed or written, bits of papers, pager, mobile phone any electronic device etc, except the Identity Card inside the examination hall/room.
9. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
10. On completion of the test, the candidate must hand over the Answer Sheet to the invigilator on duty in the Room/Hall. **However, the candidate are allowed to take away this Test Booklet with them.**
11. **Do not fold or make any stray marks on the Answer Sheet.**

Your Target is to secure Good Rank in NEET 2020

MINOR TEST # 01

Topics

DATE : 07 - 04 - 2019

PRE-MEDICAL ENTHUSIAST COURSE : PHASE - I – PATTERN : [NEET]

PHYSICS : Complete XI, Ray Optics

CHEMISTRY : Complete XI, GOC, Reaction Intermediates, Type of Reaction

BIOLOGY : Complete XI, Human Reproduction, Genetics (Mendelism)

SPACE FOR ROUGH WORK

HAVE CONTROL → HAVE PATIENCE → HAVE CONFIDENCE ⇒ 100% SUCCESS

BEWARE OF NEGATIVE MARKING

1. If $\hat{a}$ and $\hat{b}$ are non-collinear unit vectors and if $|\hat{a} + \hat{b}| = \sqrt{3}$, then the value of $(2\hat{a} - 5\hat{b}) \cdot (3\hat{a} + \hat{b})$ is :-

- (1) $\frac{41}{2}$ (2) $\frac{11}{2}$
(3) $-\frac{11}{2}$ (4) $-\frac{41}{2}$

2. A particle moves in a straight line and its position x at time t is given by $x^2 = 2 + t$. Its acceleration is given by :-

- (1) $\frac{-2}{x^3}$ (2) $-\frac{1}{4x^3}$
(3) $-\frac{1}{4x^2}$ (4) $\frac{1}{x^2}$

3. A golfer standing on level ground hits a ball with a velocity of $u = 52 \text{ m/s}$ at an angle α above the horizontal. If $\tan \alpha = 5/12$, then the time interval for which the ball is at least 15 m above the ground (i.e. between A and B will be : (take $g = 10 \text{ m/s}^2$)

4. A swimmer takes 4 second in crossing some distance in downstream and taken 6 second in upstream for same distance then find the time taken by him to cover same distance in still water.

- (1) 4.8 sec (2) 2.4 sec
(3) 3.6 sec (4) 5.2 sec

5. A block of mass M is pulled by a uniform chain of mass M tied to it by applying a force F at the other end of the chain. The tension at a point distant quarter of the length of the chain from free end will be :-

- (1) $\frac{7F}{8}$ (2) $\frac{4F}{5}$
(3) $\frac{3F}{4}$ (4) $\frac{6F}{7}$

6. In the following figure, if the tension in the string AB is 51N, then the tension in the string BC will be :-

- (1) 10 N
(2) 20 N
(3) 30 N
(4) 40 N

SPACE FOR ROUGH WORK

7. A block of mass 10 kg is kept over a rough surface and a force $F = 4t$ is applied on it. At what value of t the block will start moving :-

- (1) > 10 s (2) < 8 s
(3) $= 9$ s (4) None

8. What is the maximum value of force, so that both the blocks will move together?

- (1) $\frac{10}{3}$ (2) $\frac{20}{3}$
(3) 10 N (4) $\frac{40}{3}$

9. The variation of potential energy U of a system is shown in figure. The force acting on the system is best represented by :-

10. A particle of mass m is moving in a circle of radius r under a centripetal force equal to $\frac{-K}{r^2} \hat{r}$, where K is constant. What is the total energy of the particle ?

- (1) $-K/2r$
(2) $K/4r$
(3) K/r
(4) None

SPACE FOR ROUGH WORK

11. A man of mass m stands at the left end of a uniform plank of length L and mass M , which lies on a frictionless surface of ice. If the man walks to the other end of the plank, then by what distance does the plank slide on the ice?

- (1) L (2) $\frac{ML}{m+M}$
(3) $\frac{mL}{M}$ (4) $\frac{mL}{m+M}$

12. Two uniform thin rods each of length L and mass m are joined as shown in the figure. Find the distance of centre of mass the system from point O

- (1) $L/4$ (2) $L/2$ (3) L (4) $2L$

13. Four solid rigid balls each of mass m and radius r are fixed on a rigid-ring of radius $2r$ and mass $2m$. The system is whirled about 'O' as shown. The radius of gyration of the system is :

(1) $r\sqrt{\frac{128}{5}}$

(2) $r\sqrt{\frac{88}{5}}$

(3) $r\sqrt{\frac{128}{30}}$

(4) $r\sqrt{\frac{88}{30}}$

14. A particle is moving along a straight line parallel to x -axis with constant velocity. Find angular momentum about the origin in vector form :

- (1) $+mv^2b\hat{k}$
(2) $-m vb\hat{k}$
(3) $-2m vb\hat{k}$
(4) $-m vb\hat{j}$

15. If the ratio of lengths, radii and Young's modulus of steel and brass wires in the figure are a , b and c respectively, then the corresponding ratio of increase in their lengths would be:

(1) $\frac{2a^2c}{b}$

(2) $\frac{3a}{2b^2c}$

(3) $\frac{2ac}{b^2}$

(4) $\frac{3c}{2ab^2}$

16. A liquid X of density 3.36 g/cm^3 is poured in a U-tube, which contains Hg. Another liquid Y is poured in left arm with height 8 cm. Upper levels of X and Y are same. (Density of Hg = $13.6 \times 10^3 \text{ kg/m}^3$)

What is density of Y ?

- (1) 0.8 gm/cc
(2) 1.2 gm/cc
(3) 1.4 gm/cc
(4) 1.6 gm/cc

SPACE FOR ROUGH WORK

17. A soap film of surface tension 3×10^{-2} N/m formed in a rectangular frame can support a wire as shown in the figure. If $g = 10 \text{ ms}^{-2}$ then the mass of the wire is :-

- (1) 0.006 g
(2) 0.06 g
(3) 0.6 g
(4) 6 g

18. 2g ice at 0°C is mixed with 1g steam at 100°C . Find the final temperature of the mixture.

- (1) 0° (2) 50°
(3) 100°C (4) $>100^\circ\text{C}$

19. A sphere and cube made of same material and having same surface area are heated to the same temperature and kept in the same surrounding. The ratio of their initial rates of cooling will be:-

- (1) $\sqrt{\frac{\pi}{6}}:1$ (2) $\sqrt{\frac{\pi}{2}}:1$
(3) $\sqrt{\frac{\pi}{3}}:1$ (4) $\frac{\pi}{\sqrt{3}}:1$

20. A thin wire of length ℓ when heated to a certain temperature increases its length by 1%. A sheet of the same material of area $2\ell \times \ell$ is heated to the same temperature, percentage increase in area will be :-

- (1) 4 % (2) 2.5 %
(3) 2 % (4) 1.5 %

21. One mole of a diatomic gas undergoes a

process $P = \frac{P_0}{1 + \left(\frac{V}{V_0}\right)^3}$, where P_0, V_0 are

constants. The translational kinetic energy of the gas when

$V = V_0$ is given by

- (1) $\frac{5P_0 V_0}{4}$ (2) $\frac{3P_0 V_0}{4}$
(3) $\frac{3P_0 V_0}{2}$ (4) $\frac{5P_0 V_0}{2}$

22. A box of negligible mass containing 2 moles of an ideal gas of molar mass M and adiabatic exponent γ moves with constant speed v on a smooth horizontal surface. If the box suddenly stops, then change in temperature of gas will be :

- (1) $\frac{(\gamma-1)Mv^2}{4P}$
(2) $\frac{\gamma Mv^2}{2R}$
(3) $\frac{Mv^2}{2(\gamma-1)R}$
(4) $\frac{(\gamma-1)Mv^2}{2R}$

SPACE FOR ROUGH WORK

23. The plot of velocity (v) versus displacement (x) of a particle executing simple harmonic motion is shown in figure. The time period of oscillation of particle is :-

- (1) $\frac{\pi}{2}$ s (2) π s
(3) 2π s (4) 3π s
24. A pendulum has period T for small oscillations. An obstacle is placed directly beneath the pivot, so that only the lowest one quarter of the string can follow the pendulum bob when it swings in the left of its resting position as shown in the figure. The pendulum is released from rest at a certain point A. The time taken by it to return to that point is :-

- (1) T (2) $T/2$ (3) $3T/4$ (4) $T/4$

25. Four tuning forks of frequencies 200, 201, 204 and 206 Hz are sounded together. The beat frequency will be :-
(1) 6 (2) 12
(3) 15 (4) None of these
26. An observer moves towards a stationary source of sound, with a velocity one-fifth of the velocity of sound. What is the percentage increase in the apparent frequency :-
(1) 5% (2) 20% (3) zero (4) 0.5%
27. When a beam of light is incident on a plane mirror, it is found that a real image is formed. The incident beam must be
(1) Converging
(2) Diverging
(3) Parallel
(4) Formation of real image by a plane mirror is impossible
28. A convex mirror is used to form an image of a real object. Then mark the wrong statement
(1) The image lies between the pole and focus
(2) The image is diminished in size
(3) The image is erect
(4) The image is real
29. A concave mirror of focal length f produces an image n times the size of the object. If the image is real then the distance of the object from the mirror is

- (1) $(n - 1) f$ (2) $\left\{ \frac{(n - 1)}{n} \right\} f$
(3) $\left\{ \frac{(n + 1)}{n} \right\} f$ (4) $(n + 1) f$

SPACE FOR ROUGH WORK

30. A convex mirror has a focal length f . A real object is placed at a distance f in front of it, from the pole. It produces an image at
 (1) Infinity (2) f
 (3) $f/2$ (4) $2f$
31. The length of a vertical pole at the surface of a lake of water ($\mu = \frac{4}{3}$) is 24 cm. Then to an under-water fish just below the water surface the tip of the pole appears to be
 (1) 18 cm above the surface
 (2) 24 cm above the surface
 (3) 32 cm above the surface
 (4) 36 cm above the surface
32. A ray of light strikes a glass plate at an angle 60° . If the reflected and refracted rays are perpendicular to each other, the index of refraction of glass is
 (1) $\sqrt{3}$ (2) $3/2$
 (3) $\sqrt{(3/2)}$ (4) $1/2$
33. A microscope is focussed on a coin lying at the bottom of a beaker. The microscope is now raised by 1 cm. To what depth should water be poured into the beaker so that the coin is again in focus?
 (The refractive index of water is $\frac{4}{3}$)
 (1) 1 cm (2) $4/3$ cm
 (3) 3 cm (4) 4 cm
34. The focal lengths of the objective and eye lens of a telescope are respectively 200 cm and 5 cm. The maximum magnifying power of the telescope will be
 (1) – 40 (2) – 48
 (3) – 60 (4) – 100
35. Which of the following is possible application of fibre optics?
 (1) Endoscopy
 (2) High speed internet traffic
 (3) Radio, TV & Telephone signals
 (4) All of the above
36. An object is placed at a distance of $f/2$ from a convex lens. The image will be
 (1) At one of the foci, virtual and double its size
 (2) At $3f/2$, real and inverted
 (3) At $2f$, virtual and erect
 (4) At f , real and inverted
37. If in a plano-convex lens, radius of curvature of convex surface is 10 cm and the focal length of lens is 30 cm, the refractive index of the material of the lens will be
 (1) 1.5 (2) 1.66
 (3) 1.33 (4) 3
38. Two plano-convex lenses of equal focal lengths are arranged as shown

 The ratio of the combined focal lengths is
 (1) 1 : 2 : 1 (2) 1 : 2 : 3
 (3) 1 : 1 : 1 (4) 2 : 1 : 2

SPACE FOR ROUGH WORK

39. When an object is at a distance u_1 and u_2 from a lens, real image and a virtual image is formed respectively having same magnification. The focal length of the lens is

 - (1) $u_1 - u_2$
 - (2) $\frac{u_1 - u_2}{2}$
 - (3) $\frac{u_1 + u_2}{2}$
 - (4) $u_1 + u_2$

40. A concave lens of focal length f produces an image $(1/x)$ of the size of the object. The distance of the object from the lens is

 - (1) $(x - 1) f$
 - (2) $(x + 1) f$
 - (3) $\{(x - 1)/x\} f$
 - (4) $\{(x + 1)/x\} f$

41. A thin equiconvex glass lens of refractive index 1.5 has power of 5D. When the lens is immersed in a liquid of refractive index μ , it acts as a divergent lens of focal length 100 cm. The value of μ for liquid is

 - (1) $4/3$
 - (2) $3/4$
 - (3) $5/3$
 - (4) $8/3$

42. A prism of refractive index $\sqrt{2}$ has a refracting angle of 60° . At what angle must a ray be incident on it so that it suffers a minimum deviation?

 - (1) 30°
 - (2) 45°
 - (3) 60°
 - (4) 75°

43. A person can see clearly only up to a distance of 25 cm. He wants to read a book placed at a distance of 50 cm. What kind of lens does he require for this purpose and what must be its power?

 - (1) Concave, -1.0 D
 - (2) Convex, $+1.5$ D
 - (3) Concave, -2.0 D
 - (4) Convex, $+2.0$ D

44. An astronomical telescope has an objective of focal length 100 cm and an eye piece of focal length 5 cm. The final image of a star is seen 25 cm from the eyepiece. The magnifying power of the telescope is

 - (1) 20
 - (2) 22
 - (3) 24
 - (4) 26

45. When a telescope is adjusted for normal vision, the distance of the objective from the eye-piece is found to be 80 cm. The magnifying power of the telescope is 19. What are the focal lengths of the lenses?

 - (1) 61 cm, 19 cm
 - (2) 40 cm, 40 cm
 - (3) 76 cm, 4 cm
 - (4) 50 cm, 30 cm

SPACE FOR ROUGH WORK

46. Most stable carbocation is

47. Arrange the Carbocations in decreasing order of stability –

- I II III
 (1) I > II > III (2) I > III > II
 (3) II > III > I (4) III > II > I

48. Which of the following is most stable -

- (1) $\text{CH}_3^\ominus$
 (2) $\text{CH}_2 = \overset{\ominus}{\text{C}}\text{H}$
 (3) $\text{CH} \equiv \overset{\ominus}{\text{C}}$
 (4) $\text{CH}_3 - \overset{\ominus}{\text{C}} \equiv \text{C}$

49. Hybridisation of carbanion in  is -

- (1) sp^3 (2) sp^2
 (3) sp (4) Unhybridised

50. H – C – H bond angle of singlet carbene is-

- (1) $\approx 180^\circ$ (2) $\approx 120^\circ$
 (3) $\approx 60^\circ$ (4) $\approx 90^\circ$

51. The end product of the following reaction is

- (1)  (2) 
 (3)  (4) 

52. Which carbocation will not form as intermediate ?

- (1) $(\text{C}_6\text{H}_5)_3\text{C}^\oplus$
 (2) 
 (3) 

53. Which of following compound is aromatic ?

- (1)  (2) 
 (3)  (4) 

SPACE FOR ROUGH WORK

54. The decreasing order of nucleophilicity among the nucleophiles -

(1) I, II, III, IV

(2) IV, III, II, I

(3) II, III, I, IV

(4) III, II, I, IV

55. Which of the following shows the correct order of decreasing stability -

56. Which carbocation among the following is most stable ?

Rearranged alkene product after rearrangement will be (mainly) -

58. Which of the following compounds are meso forms ?

(1) 1 only

(2) 3 only

(3) 1 and 2

(4) 2 and 3

SPACE FOR ROUGH WORK

59. Ethene reacts with HOCl to form –

- (1) Hydroxy ethene
- (2) Chloro ethene
- (3) Ethylene chlorohydrin
- (4) None

A will have configuration -

- (3) both true
- (4) none is true

61. (CH₃)₃CMgCl on reaction with D₂O produces-

- (1) (CH₃)₃CD
- (2) (CH₃)₃COD
- (3) (CD₃)₃CD
- (4) (CD₃)₃COD

63. Which is the lowest energy conformation of butane ?

64. Which of the following alkenes is the most reactive towards the addition of bromine ?

SPACE FOR ROUGH WORK

66. Identify the no. of α -Hydrogen in the given compound?

(1) 2

(2) 3

(3) 4

(4) 6

67. Steric inhibition of resonance take place in :-

68. Correct order of basic strength is :-

69. The most stable carbocation is :-

SPACE FOR ROUGH WORK

70. The IUPAC name of following compound is :-

- (1) 6-Bromo-2-Chloro cyclohexene
- (2) 3-Bromo-1-Chloro cyclohexene
- (3) 1-Bromo-3-Chloro cyclohexene
- (4) 2-Bromo-6-Chloro cyclohexene

71. The total no. of structural isomer of C_3H_6O is :-

- (1) 4
- (2) 2
- (3) 3
- (4) 9

72. Calculate the ratio of radius 4th Bohr's to 2nd Bohr's orbit for He^+ ion.

- (1) $\frac{1}{4}$
- (2) $\frac{4}{1}$
- (3) $\frac{1}{2}$
- (4) $\frac{2}{1}$

73. The graph which will be representing all the equilibrium concentrations for the reaction

(the concentrations of $N_2O_4(g)$ and of $NO_2(g)$ for which the following reaction will be at equilibrium will lie on which of the following graphs)

74. Which characteristic of an atomic orbital is most closely associated with the magnetic quantum number, m_l ?

- (1) size
- (2) Shape
- (3) Occupancy
- (4) Orientation

SPACE FOR ROUGH WORK

75. In the Lotter Meyer graph; A, B, C, D and E elements are :

- (1) halogens
(2) alkaline earth metals
(3) alkali metals
(4) transition metals
76. Condition suitable for high solubility of ionic compound in solvent should be :
(1) High lattice energy and low hydration energy
(2) Low lattice energy and high hydration energy
(3) Lattice energy must be equal to hydration energy
(4) Solubility is independent of lattice or hydration energy
77. Which of the following atomic orbital overlappings are not allowed?

- (1) All of these
(2) (P) (Q) (R)
(3) (P) (R) (T)
(4) (Q) only
78. Which of the following are sp^2 hybridised species?
(1) CO_3^{2-}
(2) NO_3^-
(3) BF_3
(4) All are correct
79. Which of the following molecule is planar?
(1) $F_2C = C = C = CF_2$
(2) $H_2C = C = CH_2$
(3) C_2H_2
(4) All of these
80. Which of the following has 3c-4e bond?
(1) $B(OCH_3)_3$
(2) Be_2Cl_4
(3) $Be(OCH_3)_2$
(4) All of these
81. The formula of the pyrosilicate ion is :-
(1) SiO_4^{4-}
(2) $Si_3O_9^{2-}$
(3) $Si_2O_7^{6-}$
(4) $Si_6O_{18}^{12-}$

SPACE FOR ROUGH WORK

91. What % of trihybrid will be obtained by the cross of trihybrid plant with a recessive plant :-
 (1) 25% (2) 12.5%
 (3) $\frac{1}{64} \times 100$ (4) $\frac{3}{8} \times 100$
92. Genes of seven characters studies by Mendel were not located on chromosome number :-
 (1) 1, 2, 3, 4 (2) 2, 3, 6
 (3) 1, 4, 6, 7 (4) 1, 2, 3, 8
93. A tall red flowered plant was crossed with a dwarf white flowered plant. It produces heterozygous tall-red flowered offspring. On selfing of this dihybrid plant, it produces 16 offsprings. What is the ratio of offsprings which show parental phenotype :-
 (1) 1 : 1 : 1 : 1 (2) 9 : 3 : 3 : 1
 (3) 9 : 1 (4) 10 : 2
94. What is true for law of independent assortment?
 (1) Applicable to all the dominant alleles
 (2) Applicable to all genes on the same chromosome
 (3) four type of gametes are formed in dihybrid
 (4) Applicable to all recessive alleles
95. A trihybrid AaBbCc plant produces :-
 (1) 8-types of gametes in ratio of 27 : 9 : 9 : 9 : 3 : 3 : 3 : 1
 (2) 8-types of gametes in ratio of 1 : 1 : 1 : 1 : 1 : 1 : 1 : 1
 (3) 27-types of gametes
 (4) None of the above
96. The term hemizygous means :-
 (1) A condition in which only one allele of a pair is present
 (2) Many alleles of each gene are present
 (3) Pair of contrasting traits are present
 (4) Two similar alleles are present
97. Choose the correct statement from the given below :-
 (1) % of heterozygosity increases due to selfing
 (2) Bagging technique was used by Mendel to prevent unwanted cross pollination.
 (3) When cross between red flowered & white flowered *Mirabilis jalapa* takes place then only red flowered plants are obtained in F_1 due to dominance.
 (4) Mendel used sweet pea plant for his experiments
98. Mendel observed that all the F_1 progeny plants :-
 (1) Resembled either one of the parents
 (2) Resembled neither of the parents
 (3) Resembled both of the parents
 (4) Shows 3 : 1 ratio
99. According to Mendel, "factors" or "genes" :-
 (1) Are the units of inheritance
 (2) Contain information that is required to express a particular trait
 (3) Both (1) and (2)
 (4) None of the above
100. The segregation of alleles is random process and so there is a _____ chance of a gamete containing either allele :-
 (1) 25% (2) 50%
 (3) 75% (4) 100%
101. "When two pairs of traits are combined in a hybrid, segregation of one pair of characters is independent of the other pair of characters". This explains :-
 (1) Law of dominance
 (2) Law of segregation
 (3) Law of independent assortment
 (4) Postulate of paired factors
102. Which scientist has no role in rediscovery of Mendel's results?
 (1) Vries (2) Correns
 (3) Tschermak (4) Morgan

103. The recessive characters are :-
 (1) Only expressed in heterozygous condition
 (2) Only expressed in homozygous condition
 (3) Blended in heterozygous condition
 (4) Always impure
104. What is correct ?
 (1) Each back cross is test cross.
 (2) Each test cross is back cross.
 (3) Crossing F_2 with F_1 is called test cross.
 (4) Crossing F_2 with either parent is called test cross.
105. Types of gametes formed by the plant with genotype AABbccDD will be :-
 (1) 4 (2) 16 (3) 8 (4) 2
106. In monohybrid cross, pure homozygous plants will be :-
 (1) one (2) two
 (3) three (4) four
107. Which of the following characters was not chosen by Mendel?
 (1) Pod shape
 (2) Pod colour
 (3) Location of flower
 (4) Location of seeds
108. Among the seven pairs of contrasting traits in pea plant as studied by Mendel, the number of traits related to flower and pod :-
 (1) 2, 2 (2) 2, 3
 (3) 1, 2 (4) 1, 1
109. In F_2 -generation of dihybrid cross, what is the ratio of new combination?
 (1) 9 : 1 (2) 3 : 3
 (3) 9 : 4 (4) 5 : 3
110. Which of the following conclusion of Mendel can be explained by dihybrid cross?
 (1) Dominance
 (2) Unit factor and segregation
 (3) Independent assortment
 (4) All of the above
111. Taxonomic key is based on the contrasting characters generally in a pair known as
 (1) Lead
 (2) Grade
 (3) Taxon
 (4) Couplet
112. T4- bacteriophage usually have
 (1) SS-DNA
 (2) DS-DNA
 (3) SS-RNA
 (4) DS-RNA
113. Which of the following is a true moss?
 (1) Spike moss
 (2) Little club moss
 (3) Bog moss
 (4) Irish moss
114. Which of the following structures in *pinus* are haploid?
 (1) Endosperm, Megaspore, Pollen grain
 (2) Megaspore, Nucellus, Integument
 (3) Microspore, Nucellus, Megasporophyll
 (4) Endosperm, Microspore, Perisperm
115. Root hairs are
 (1) Unicellular and endogenous
 (2) Unicellular and exogenous
 (3) Multicellular and branched
 (4) Multicellular and unbranched
116. The type of subaerial stem modification depicted in the given figure is called

- (1) Runner (2) Sucker
 (3) Stolon (4) Offset

117. Fleshy bud which take part in vegetative reproduction are called
 (1) Cladode (2) Corn
 (3) Bulbil (4) Scape

118. Which of the following is correctly matched?

- (1) Bulb-Onion
- (2) Stolon - *Pistia*
- (3) Tuber-Ginger
- (4) Runner-Mint

119. Select the incorrect match w.r.t. leaf modification with their function.

Leaf Modification	Function
(1) Tendrils	Climbing
(2) Spines	Protection
(3) Phyllode	Photosynthesis
(4) Leaf pitcher	Store food

120. The following figure represent which type of aestivation?

- (1) Valvate
- (2) Twisted
- (3) Vexillary
- (4) Imbricate

121. During biological nitrogen fixation, inactivation of nitrogenase by oxygen poisoning is prevented by :-

- (1) Cytochrome
- (2) Leg-haemoglobin
- (3) Xanthophyll
- (4) Carotene

122. Spikelet is commonly seen in

- (1) Radish
- (2) Mustard
- (3) Cauliflower
- (4) Wheat

123. Which of the following epigynous condition of a flower?

- (1) A
- (2) B
- (3) C
- (4) D

124. Identify incorrect labelling w.r.t. figure of monocotyledonous seed.

- (1) A - Seed coat and pericarp
- (2) B - Proteinaceous triploid layer
- (3) C - Product of triple fusion
- (4) D - Protective covering of plumule

125. Most abundant primary permanent tissue in plant body is

- (1) Parenchyma
- (2) Collenchyma
- (3) Sclerenchyma
- (4) Prosenchyma

126. Which of these is responsible for grittiness of fruit?

- (1) Stone cells
- (2) Rod cells
- (3) Star cells
- (4) Collenchymatous tissue

127. How many structure in the list given below are developed from the cork cambium during secondary growth?

Secondary xylem, Complementary cells, Cork, Secondary cortex, Secondary xylem, Phellogen

- (1) Three
- (2) Four
- (3) Two
- (4) One

128. Read the following statement (A–E) and choose the suitable option w.r.t. Kreb's cycle.

- (A) The first product of Kreb's cycle is 6C compound formed by condensation
(B) Kreb's cycle involves five oxidation and 2 decarboxylation process
(C) A single turn of Kreb's cycle produces 12 ATP
(D) During the conversion of α -Ketoglutarate to succinyl CoA molecule of GTP is synthesized
(E) Acetyl CoA, a high energy compound act as substrate entrant for the cycle

How many statements are correct?

- (1) Two
(2) Three
(3) One
(4) Five

129. The correct names of A, B and C amino acids are:

	A	B	C
(1)	Serine	Cysteine	Phenylalanine
(2)	Serine	Methionine	Tyrosine
(3)	Alanine	Methionine	Phenylalanine
(4)	Alanine	Cysteine	Tyrosine

130. Casparian strips of endodermis is made up of

- (1) Lignin
(2) Chitin
(3) Suberin
(4) Pectin

131. In given diagram, the flow of water is possible from

- (1) $A \rightarrow B \rightarrow C$
(2) $A \rightarrow B \leftarrow C$
(3) $A \leftarrow B \rightarrow C$
(4) $A \leftarrow B \leftarrow C$

132. Nitrogen is absorbed by plants

- (1) NO_3^-
(2) NO_2^-
(3) NH_4^+
(4) All of these

133. GTP is formed in Kreb's cycle when

- (1) Oxalosuccinate $\rightarrow$ α -Ketoglutarate
(2) Malate $\rightarrow$ OAA
(3) Succinyl CoA - Succinate
(4) α -Ketoglutarate $\rightarrow$ Succinyl CoA

134. In tea plantation and Hedge making decapitation results into

- (1) Inhibition of axillary bud
(2) Rosette habit
(3) Petiole elongation
(4) Growth of axillary bud

135. Attribute the following function to different phytohormones correctly.

Function		Phytohormone	
(A)	Increase the length of grape stalk	(i)	Cytokinin
(B)	Apical dominance	(ii)	Ethylene
(C)	Weedicide	(iii)	Auxin
(D)	Stomatal opening	(iv)	Abscisic acid

The correct match is

- (1) A(i) (2) B(ii)
(3) C(iii) (4) D(iv)

- | | |
|--|--|
| <p>136. Development of egg without fertilization is called :-
 (1) Blastogenesis
 (2) Embryogenesis
 (3) Parthenogenesis
 (4) Metagenesis</p> <p>137. The period from birth to the natural death of an organism represents its:
 (1) Life cycle
 (2) Life span
 (3) Ageing
 (4) Life expectancy</p> <p>138. The number of testicular lobules in each testis are
 (1) 400 (2) 500 (3) 20 (4) 250</p> <p>139. Sperms are produced in
 (1) Seminal vesicles
 (2) Prostate gland
 (3) Seminiferous tubules
 (4) Epididymis</p> <p>140. Testis are suspended in a pouch of skin called
 (1) Inguinal canal (2) Scrotum
 (3) Tunica vasculosa (4) Bladder</p> <p>141. Seminiferous tubules are lined by two types of cells, i.e.
 (1) Sertoli cells and Leydig cells
 (2) Sertoli cells and Nurse cells
 (3) Spermatogonial cells and Sertoli cells
 (4) Spermatogonial cells and Leydig cells</p> <p>142. The Leydig cells secrete
 (1) Progesterone
 (2) Estrogen
 (3) Testosterone
 (4) Cortisol</p> <p>143. Sugars that sperm use for energy is secreted by
 (1) Prostate gland (2) Seminal vesicle
 (3) Vasa efferentia (4) Epididymis</p> <p>144. The cells present outside the seminiferous tubule in interstitial spaces, are
 (1) Sertoli cells
 (2) Nurse cells
 (3) Spermatogonial cells
 (4) Leydig cells</p> | <p>145. Testis is divided into lobules due to partitions that have developed from
 (1) Tunica media
 (2) Tunica vasculosa
 (3) Tunica albuginea
 (4) Tunica interna</p> <p>146. The outermost covering of the testis is
 (1) Gubernaculum
 (2) Tunica vasculosa
 (3) Tunica vaginalis
 (4) Tunica albuginea</p> <p>147. The percentage of semen contributed by seminal vesicles is
 (1) 30% (2) 50% (3) 70% (4) 90%</p> <p>148. The unpaired gland in male reproductive system is
 (1) Cowper's gland
 (2) Seminal vesicle
 (3) Glands of Tyson
 (4) Prostate gland</p> <p>149. Scrotum helps in maintaining 2 - 2.5°C lower temperature than the normal internal body temperature because
 (1) It helps sperms in attaining motility
 (2) It is required for spermatogenesis
 (3) It helps sperms to gain normal shape
 (4) It promotes action of Sertoli cells</p> <p>150. Vas deferens unites with the duct of seminal vesicle to form
 (1) Urethra
 (2) Ejaculatory duct
 (3) Vasa efferentia
 (4) Epididymis</p> <p>151. Sertoli cells are also called
 (1) Nurse cells
 (2) Sustentacular cells
 (3) Sustentocytes
 (4) All of these</p> <p>152. Glands of Tyson are
 (1) Modified sweat glands in prepuce of humans
 (2) Modified sebaceous glands underneath prepuce
 (3) Modified sebaceous glands in epididymis
 (4) Also called bulbourethral glands</p> |
|--|--|

153. The failure in descend of testis is called
(1) Impotency (2) Castration
(3) Inguinal hernia (4) Cryptorchidism

154. Which of the following muscles will help in changing the position of testis to keep them at proper temperature for the process of spermatogenesis?

- (1) Dartos muscles
(2) Cremaster muscle
(3) Detrusor muscle
(4) Both (1) & (2)

155. The secretions of seminal plasma are

- (1) Rich in fructose, calcium but don't have enzymes
(2) Rich in fructose, calcium and have certain enzymes
(3) Rich in glucose and calcium
(4) Rich in fructose but don't have calcium

156. Identify A, B, C and D in given below figure:-

	A	B	C	D
(1)	ducts from liver	duct of santorini	cystic duct	hepato pancreatic duct
(2)	ducts from gallbladder	pancreatic duct	common bile duct	cystic duct
(3)	hepatic ducts	pancreatic duct	common bile duct	hepato pancreatic duct
(4)	common hepatic ducts	duct of wirsung	cystic duct	ampulla of vater

157. Match the following :-

Column-I		Column-II	
(A)	Ball and socket joint	(i)	Between vertebra
(B)	Cartilagenous joint	(ii)	Atlanto-axial joint
(C)	Pivot joint	(iii)	Shoulder joint
(D)	Fibrous joint	(iv)	Sutures

- (1) A-iii, B-ii, C-i, D-iv
(2) A-i, B-ii, C-iii, D-iv
(3) A-iii, B-i, C-ii, D-iv
(4) A-iv, B-iii, C-ii, D-i

158. In cockroach, wing pads are developed in :-

- (1) Last nymphal stage
(2) Second last (next to last) nymphal stage
(3) First nymphal stage
(4) Fifth instar

159. Which of the following statements is correct related to ear ?

- (A) Membranous labyrinth is surrounded by perilymph fluid while it is filled by endolymph.
(B) The malleus is attached with tympanum & the stapes is attached with round window (fenestra rotundus) of cochlea.
(C) Organ of corti is located on the tectorial membrane
(D) Sequence of ear ossicle in middle ear from outside to inside is malleus, incus, stapes

- (1) A, D (2) A, B, D
(3) B, C, D (4) All of these

160. Out of following how many belongs to class-chondrichthyes?

Exocoetus (flying fish), Hippocampus (sea horse), Scoliodon, Labeo, Pristis, Carcharodon, Trygon.

- (1) Three (2) Four
(3) Five (4) Six

161. Which one of the following is not a correct difference between rod cells and cone cells of our retina ?

		Rod cells	Cone cells
(1)	Overall function	Vision in poor light	Colour vision and detailed vision in bright light
(2)	Distribution	More concentrated in peripheral part of retina	Evenly distributed all over retina
(3)	Visual Acuity	low	High
(4)	Visual Pigment	Rhodopsin	Iodopsin

162. The figure below shows events of nerve impulse conduction.

Select the option giving correct identification what it represents.

- (1) Figure [B] – Site (a) is in refractory period.
- (2) Figure [A] & [B] – Site (a) is showing depolarization.
- (3) Figure [B] – Site (c) is showing hyper polarisation.
- (4) Figure [A] – Site (a) is showing repolarisation.

163. Arrange the following in increasing orders of their volume :-

- A - Tidal volume
B - Residual volume
C - Inspiratory reserve volume
D - Vital capacity

- (1) $A < C < B < D$
- (2) $A < B < C < D$
- (3) $A < D < C < B$
- (4) $A < D < B < C$

164. During muscle contraction cross bridge between myosin head and actin filament is break down when:-

- (1) ATP bind to myosin head
- (2) ATP break down into ADP and Pi
- (3) ADP and Pi release from myosin head
- (4) Tropomyosin cover troponin at their active site

165. Maximum hypertonic nephric filtrate is present

- (1) at the top of loop of Henle
- (2) at the base of loop of Henle
- (3) in PCT
- (4) in DCT

166. The Haemoglobin of an adult Human :-

- (1) has a higher affinity for O_2 than foetal Haemoglobin
- (2) has a lower affinity for O_2 than foetal Haemoglobin
- (3) has four subunits 2α and 2β
- (4) both (2) and (3)

167. How many of the following hormones are produced by Hypothalamus ?

ACTH, MSH, ADH, TTH, TRH, GnRH, GHRH, Calcitonin, Epinephrine, Prolactin

- (1) Three
- (2) Four
- (3) Seven
- (4) Two

168. Retrogressive metamorphism can be observed in?

- (1) *Branchiostoma*
- (2) *Salpa*
- (3) *Pleurobrachia*
- (4) *Nereis*

169. Person having 'O' blood groups have :-

- (1) Both 'A' and 'B' antigen on RBC
- (2) Only A-antigen, and anti B-antibody
- (3) No antigens but both anti A and anti B antibodies
- (4) Only B antigen

170. Muscles which are involved in normal Inspiration:-

- (1) Abdominal muscles
- (2) Inter-intercoastal muscles
- (3) Phrenic muscles and external intercoastal muscles
- (4) Only external intercoastal muscles

171. Menstrual cycle in women becomes irregular due to :-

- (1) Deficiency of thymosin hormone
- (2) Excess of glucagon
- (3) Hypothyroidism
- (4) Absence of Androgen hormone

172. Alternation of generation is seen in :-

- (1) Gorgonia
- (2) Pennatula
- (3) Obelia
- (4) Meandrina

173. Match the columns and choose the correct answer from the options gives :-

	Column-I		Column-II
(A)	Autonomic neural system	(i)	Cranial and spinal nerves
(B)	CNS	(ii)	Relay impulses from CNS to skeletal muscles
(C)	PNS	(iii)	Transmits impulses from CNS to involuntary organs and smooth muscles
(D)	Somatic neural system	(iv)	Site of information processing and control

- | | | | |
|-----------|------|-------|-------|
| A | B | C | D |
| (1) (i) | (ii) | (iii) | (iv) |
| (2) (ii) | (i) | (iv) | (iii) |
| (3) (iii) | (iv) | (i) | (ii) |
| (4) (i) | (iv) | (iii) | (ii) |

174. Which of the following statements are false/true?

- (A) Grave's disease is caused by malfunctioning of adrenal gland
- (B) Calcitonin regulates the metabolism of calcium
- (C) ADH stimulates absorption of water and increase the urine production
- (D) Oxytocin stimulates contraction of uterine muscle during birth

- (1) B and C are true, A and D are false
- (2) B and D are true, A and C are false
- (3) D and C are true, A and B are false
- (4) A and D are true, B and C are false

175.

In given representation point A, B and C are respectively :-

- (1) Hepatic portal vein, Hepatic vein, Intestine
- (2) Hepatic portal vein, Hepatic vein, Venacava
- (3) Hepatic vein, Hepatic portal vein, Intestine
- (4) Renal vein, Hepatic portal vein, Intestine

176. Condition when the heart stops beating is called:-

- (1) Cardiac arrest
- (2) Congestive heart failure
- (3) Myocardial infarction
- (4) Myocardial ischaemia

177. Number of terga and sterna present in the abdomen of male and female cockroach :-

- (1) 10 terga and 9 sterna
- (2) 9 terga and 10 sterna
- (3) 10 terga and 10 sterna
- (4) 9 terga and 9 sterna

178. Choose the correct answer for A, B, C, D from given option

Excessive loss of fluid from body activate receptors which stimulate

↓
A

↓
To release the

B

↓
From C

Facilitate D Reabsorption
From later parts of DCT

	A	B	C	D
(1)	Hypothalamus	ADH	Neurohypophysis	H ₂ O
(2)	Hypothalamus	ADH	Adenohypophysis	H ₂ O
(3)	Adrenal medulla	ADH	Neurohypophysis	H ₂ O
(4)	Adrenal cortex	ADH	Neurohypophysis	H ₂ O

179. If a molecule of CO₂ released into blood in your left foot toe is exhaled from your nose. It must pass through all of the following except :-

- (a) Pulmonary vein
- (b) Alveolus
- (c) Right atrium
- (d) Right ventricles
- (e) Trachea

- (1) a and d (2) c and d
- (3) a only (4) b only

180. Which of the following layer of eye neither contain WFCT nor appears white in colour ?

- (1) Sclera (2) Retina
- (3) Choroid (4) Cornea
