

CLASSROOM CONTACT PROGRAMME

(ACADEMIC SESSION 2019-2020)

PRE-MEDICAL : ENTHUSIAST COURSE [PHASE-II]

TEST # 11

DATE : 24-11-2019

Test Type : Minor

Test Pattern : NEET

INSTRUCTIONS

Do not open this Test Booklet until you are asked to do so

1. Immediately fill in the form number on this page of the Test Booklet with Blue/Black Ball Point Pen. Use of pencil is strictly prohibited.
2. The candidates should not write their Form Number anywhere else (except in the specified space) on the Test Booklet/Answer Sheet.
3. The test is of **3 hours** duration.
4. The Test Booklet consists of **180** questions. The maximum marks are **720**.
5. There are **three** parts in the question paper A,B,C consisting of **Physics, Chemistry** and **Biology** having **45 questions** each in Physics & Chemistry and **90 questions** in Biology part of equal weightage. Each question is allotted 4 (four) marks for **correct** response.
6. **One Fourth** mark will be deducted for indicated incorrect response of each question. **No deduction** from the total score will be made if no response is indicated for an item in the Answer Sheet.
7. Use **Blue/Black Ball Point Pen only** for writing particulars/markings responses on **Side-1** the Answer Sheet. **Use of pencil is strictly prohibited.**
8. No candidate is allowed to carry any textual material, printed or written, bits of papers, pager, mobile phone any electronic device etc, except the Identity Card inside the examination hall/room.
9. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
10. On completion of the test, the candidate must hand over the Answer Sheet to the invigilator on duty in the Room/Hall. **However, the candidate are allowed to take away this Test Booklet with them.**
11. **Do not fold or make any stray marks on the Answer Sheet.**

BEWARE OF NEGATIVE MARKING

- | | |
|--|---|
| <p>1. Two coherent monochromatic light beams of intensities I and $4I$ are superposed. The maximum and minimum possible intensities in the resulting beam are
 (1) $5I$ and I (2) $5I$ and $3I$
 (3) $9I$ and I (4) $9I$ and $3I$</p> <p>2. The ratio of intensities of two waves is $9 : 1$. They are producing interference. The ratio of maximum and minimum intensities will be
 (1) $10 : 8$ (2) $9 : 1$
 (3) $4 : 1$ (4) $2 : 1$</p> <p>3. If the ratio of intensities of two waves is $1 : 25$, then the ratio of their amplitudes will be
 (1) $1 : 25$ (2) $5 : 1$
 (3) $26 : 24$ (4) $1 : 5$</p> <p>4. If the amplitude ratio of two sources producing interference is $3 : 5$, the ratio of intensities at maxima and minima is
 (1) $25 : 16$ (2) $5 : 3$
 (3) $16 : 1$ (4) $25 : 9$</p> <p>5. For constructive interference to take place between two monochromatic light waves of wavelength λ, the path difference should be
 (1) $(2n-1)\frac{\lambda}{4}$ (2) $(2n-1)\frac{\lambda}{2}$
 (3) $n\lambda$ (4) $(2n+1)\frac{\lambda}{2}$</p> | <p>6. Two sources of waves are called coherent if
 (1) Both have the same amplitude of vibrations
 (2) Both produce waves of the same wavelength
 (3) Both produce waves of the same wavelength having constant phase difference
 (4) Both produce waves having the same velocity</p> <p>7. Which of the following statements indicates that light waves are transverse
 (1) Light waves can travel in water
 (2) Light waves show interference
 (3) Light waves can be polarized
 (4) Light waves can be diffracted</p> <p>8. Wavelength of light of frequency 100Hz
 (1) $2 \times 10^6 \text{ m}$
 (2) $3 \times 10^6 \text{ m}$
 (3) $4 \times 10^6 \text{ m}$
 (4) $5 \times 10^6 \text{ m}$</p> <p>9. Which of the following is conserved when light waves interfere
 (1) Intensity
 (2) Energy
 (3) Amplitude
 (4) Momentum</p> <p>10. Intensity of light depends upon
 (1) Velocity (2) Wavelength
 (3) Amplitude (4) Frequency</p> |
|--|---|

SPACE FOR ROUGH WORK

11. If two waves represented by $y_1 = 4 \sin \omega t$ and $y_2 = 3 \sin\left(\omega t + \frac{\pi}{3}\right)$ interfere at a point, the amplitude of the resulting wave will be about
(1) 7 (2) 6 (3) 5 (4) 3.5
12. Two beams of light having intensities I and $4I$ interfere to produce a fringe pattern on a screen. The phase difference between the beams is $\frac{\pi}{2}$ at point A and π at point B. Then the difference between the resultant intensities at A and B is
(1) $2I$ (2) $4I$ (3) $5I$ (4) $7I$
13. Intensities of the two waves of light are I and $4I$. The maximum intensity of the resultant wave after superposition is
(1) $5I$ (2) $9I$
(3) $16I$ (4) $25I$
14. Monochromatic green light of wavelength $5 \times 10^{-7} m$ illuminates a pair of slits $1 mm$ apart. The separation of bright lines on the interference pattern formed on a screen $2 m$ away is
(1) $0.25 mm$ (2) $0.1 mm$
(3) $1.0 mm$ (4) $0.01 mm$
15. In Young's double slit interference experiment, the slit separation is made 3 fold. The fringe width becomes
(1) $1/3$ times (2) $1/9$ times
(3) 3 times (4) 9 times
16. In a certain double slit experimental arrangement interference fringes of width $1.0 mm$ each are observed when light of wavelength $5000 \text{ \AA}$ is used. Keeping the set up unaltered, if the source is replaced by another source of wavelength $6000 \text{ \AA}$, the fringe width will be

- (1) $0.5 mm$ (2) $1.0 mm$
(3) $1.2 mm$ (4) $1.5 mm$

17. The figure shows a double slit experiment P and Q are the slits. The path lengths PX and QX are $n\lambda$ and $(n+2)\lambda$ respectively, where n is a whole number and λ is the wavelength. Taking the central fringe as zero, what is formed at X

- (1) First bright (2) First dark
(3) Second bright (4) Second dark
18. In Young's experiment, the distance between the slits is reduced to half and the distance between the slit and screen is doubled, then the fringe width
(1) Will not change
(2) Will become half
(3) Will be doubled
(4) Will become four times
19. In a Young's double slit experiment, the fringe width is found to be $0.4 mm$. If the whole apparatus is immersed in water of refractive index $4/3$ without disturbing the geometrical arrangement, the new fringe width will be
(1) $0.30 mm$ (2) $0.40 mm$
(3) $0.53 mm$ (4) 450 micron

SPACE FOR ROUGH WORK

20. In two separate set - ups of the Young's double slit experiment, fringes of equal width are observed when lights of wavelengths in the ratio 1 : 2 are used. If the ratio of the slit separation in the two cases is 2 : 1, the ratio of the distances between the plane of the slits and the screen in the two set - ups is
 (1) 4 : 1 (2) 1 : 1 (3) 1 : 4 (4) 2 : 1
21. Two Polaroids P_1 and P_2 are placed with their axis perpendicular to each other. Unpolarised light I_0 is incident on P_1 . A third polaroid P_3 is kept in between P_1 and P_2 such that its axis makes an angle 45° with that of P_1 . The intensity of transmitted light through P_2 is :-
 (1) $\frac{I_0}{4}$ (2) $\frac{I_0}{8}$ (3) $\frac{I_0}{16}$ (4) $\frac{I_0}{2}$
22. The number of photons of wave length 540 nm emitted per sec by in electric bulb of power 100 W is :-
 (Taking $h = 6 \times 10^{-34}$ J-sec)
 (1) 2.7×10^{17} (2) 2.5×10^{18}
 (3) 3×10^{15} (4) 3×10^{20}
23. Two identical metal plates show photoelectric effect by a light of wavelength λ_A falling on plate A and λ_B on plate B ($\lambda_A = 2\lambda_B$). The maximum kinetic energy is :-
 (1) $K_A = K_B$ (2) $K_A < K_B/2$
 (3) $K_A = 2K_B$ (4) $K_A = K_B/2$
24. In PEE, value of $K_{\max}$ is equal to K_0 . If frequency of light is doubled than $K_{\max}$ is $3K_0$. If frequency is three times the calculate $K_{\max}$.
 (1) K_0 (2) $3K_0$ (3) $5K_0$ (4) $6K_0$
25. In the given nuclear reaction A, B, C, D, E represents

$${}_{92}\text{U}^{238} \xrightarrow{\alpha} {}_B\text{Th}^A \xrightarrow{\beta} {}_D\text{Pa}^C \xrightarrow{E} {}_{92}\text{U}^{234}$$

 (1) $A = 234, B = 90, C = 234, D = 91, E = \beta$
 (2) $A = 234, B = 90, C = 238, D = 94, E = \alpha$
 (3) $A = 238, B = 93, C = 234, D = 91, E = \beta$
 (4) $A = 234, B = 90, C = 234, D = 93, E = \alpha$
26. Starting with a sample of pure Cu^{66} , (7/8) of it decays into Zn in 15 minutes. The corresponding half-life is
 (1) 10 min (2) 15 min
 (3) 5 min (4) 7.5 min
27. Activity of a radioactive element is decreased to one-third of original activity R_0 in 9 years. After further 9 years, its activity will be
 (1) R_0 (2) $\frac{2}{3}R_0$
 (3) $\frac{R_0}{9}$ (4) $\frac{R_0}{6}$
28. The fraction of a radioactive substance decayed in a time equal to the average life :-
 (1) $\frac{e-1}{e}$ (2) $\frac{1-e}{e}$ (3) $\frac{1}{1-e}$ (4) $\frac{1}{e}$
29. The wrong statement is :-
 (1) Nuclear forces are strongest
 (2) Nuclear forces are very short range forces
 (3) Nuclear force increase when the number of nucleons is increased
 (4) Nuclear force can be both attractive and repulsive

SPACE FOR ROUGH WORK

30. A free neutron decays to a proton but a free proton does not decay to a neutron because
 (1) A neutron is a composite particle made of a proton and an electron where as proton is a fundamental particle.
 (2) Neutron is an uncharged particles where as a proton is a charged particle.
 (3) A neutron has larger rest mass than the proton.
 (4) None
31. The half life of a radioactive nuclei is 20 days The time interval ($t_2 - t_1$) between the time t_2 when 80% of it has decayed and the time t_1 when 20% of it had decayed is :
 (1) 60 days (2) 40 days
 (3) 20 days (4) 50 days
32. The number of α and β emitted during the radioactive decay is ${}_{88}^{226}\text{X} \longrightarrow {}_{82}^{206}\text{Y}$
 (1) 3α & $6\beta^-$ (2) 4α & $5\beta^-$
 (3) 5α & $4\beta^-$ (4) 6α & $6\beta^-$
33. Two samples of different radioactive substance initially have the ratio of active nuclei 4 : 1 and then half lives are 12 hrs and 16 hrs respectively. Find the ratio of active nuclei of the two samples after 2 days :-
 (1) 1 : 2 (2) 2 : 1 (3) 4 : 1 (4) 1 : 4
34. The nuclear radius of a nucleus with nucleon number 16 is 3×10^{-15} metre. Then the nuclear radius of a nucleus with nucleon number 128 is :-
 (1) 3×10^{-15} m (2) 1.5×10^{-15} m
 (3) 6×10^{-15} m (4) 4.5×10^{-15} m

35. A common emitter amplifier has a voltage gain of 50, an input impedance of 100Ω and an output impedance of 200Ω . The power gain of the amplifier is :-
 (1) 5000 (2) 1000
 (3) 1250 (4) 100
36. The logic circuit shown below has the input waveforms 'A' and 'B' as shown. Pick out the correct output waveform :-

SPACE FOR ROUGH WORK

37. Truth table for system of four NAND gates as shown in figure is :

(1)

A	B	Y
0	0	0
0	1	1
1	0	1
1	1	0

(2)

A	B	Y
0	0	0
0	1	0
1	0	1
1	1	1

(3)

A	B	Y
0	0	1
0	1	1
1	0	0
1	1	0

(4)

A	B	Y
0	0	1
0	1	0
1	0	0
1	1	1

38. Of the diodes shown in the following diagrams, which one is reverse biased ?

39. Determine V_0 for the network

- (1) 6.6 V (2) 9V
(3) - 9V (4) - 6.6 V

40. In the circuit shown in Figure, the current gain, $\beta = 100$ for the transistor. What would be the bias resistance R_B so that $V_{CE} = 5V$? (Neglect V_{BE}).

- (1) $2 \times 10^3 \Omega$ (2) $2 \times 10^5 \Omega$
(3) $1 \times 10^6 \Omega$ (4) 500Ω

41. In the case of forward biasing of PN-junction, which one of the following figures correctly depicts the direction of flow of carriers :-
(Arrow indicate the flow of the majority charge carriers)

SPACE FOR ROUGH WORK

42. In Figure, V_0 is the potential barrier across a p-n junction :-

- (1) 1 and 3 both correspond to forward bias of junction
- (2) 3 corresponds to forward bias of junction and 1 corresponds to reverse bias of junction
- (3) 1 corresponds to forward bias and 3 corresponds to reverse bias of junction
- (4) 3 and 1 both correspond to reverse bias of junction

43. The I-V characteristic of an LED is :-

R : Red, Y : Yellow, G : Green, B : Blue

44. The work function of a metal is w and λ is the wavelength of incident radiation. there is no emission of photoelectrons when :-

(1) $\lambda > \frac{hc}{w}$

(2) $\lambda = \frac{hc}{w}$

(3) $\lambda < \frac{hc}{w}$

(4) $\lambda \leq \frac{hc}{w}$

45. The graph shows variation of photo current versus anode potential if work function of cathode used in experiment is 4eV. Then energy of incident photon's :-

(1) 2eV

(2) 4 eV

(3) 6 eV

(4) 8 eV

SPACE FOR ROUGH WORK

- | | |
|---|---|
| <p>46. The number of P—O—P bonds in cyclic metaphosphoric acid is –
 (1) Zero (2) Two
 (3) Three (4) Four</p> <p>47. Amongst H_2O, H_2S, H_2Se and H_2Te, the one with the highest boiling point is –
 (1) H_2O because of hydrogen bonding
 (2) H_2Te because of higher molecular weight
 (3) H_2S because of hydrogen bonding
 (4) H_2Se because of lower molecular weight.</p> <p>48. Which of the following are hydrolysed –
 (1) NCI_3 (2) $SiCl_4$
 (3) CCl_4 (4) Both (1) & (2)</p> <p>49. The set with correct order of acidity is –
 (1) $HClO < HClO_2 < HClO_3 < HClO_4$
 (2) $HClO_4 < HClO_3 < HClO_2 < HClO$
 (3) $HClO < HClO_4 < HClO_3 < HClO_2$
 (4) $HClO_4 < HClO_2 < HClO_3 < HClO$</p> <p>50. The number of S—S bonds in sulphur trioxide trimer, (S_3O_9) is –
 (1) Three (2) Two
 (3) One (4) Zero</p> <p>51. H_3BO_3 is –
 (1) Monobasic acid and weak Lewis acid
 (2) Monobasic and weak Bronsted acid
 (3) Tribasic and strong Lewis acid
 (4) Tribasic and weak Bronsted acid</p> <p>52. Name of the structure of silicates in which three oxygen atoms of $[SiO_4]^{4-}$ are shared is –</p> | <p>(1) Pyrosilicate
 (2) Sheet silicate
 (3) Linear chain silicate
 (4) Three dimensional silicate</p> <p>53. A solid has a structure in which W atoms are located at the corners of a cubic lattice, O atom at the centre of the edges and Na atom at centre of the cubic. The formula for the compound is :-
 (1) $NaWO_2$
 (2) $NaWO_3$
 (3) Na_2WO_3
 (4) $NaWO_4$</p> <p>54. Which of the following statements is correct in the rock-salt structure of an ionic compounds?
 (1) coordination number of cation is four whereas that of anion is six.
 (2) coordination number of cation is six whereas that of anion is four.
 (3) coordination number of each cation and anion is four.
 (4) coordination number of each cation and anion is six.</p> <p>55. The coordination number of cation and anion in Fluorite CaF_2 and $CsCl$ are respectively :-
 (1) 8 : 4 and 6 : 3
 (2) 6 : 3 and 4 : 4
 (3) 8 : 4 and 8 : 8
 (4) 4 : 2 and 2 : 4</p> |
|---|---|

SPACE FOR ROUGH WORK

56. The tetrahedral voids formed by ccp arrangement of Cl^- ions in rock salt structure are :-
 - (1) occupied by Na^+ ions
 - (2) occupied by Cl^- ions
 - (3) occupied by either Na^+ or Cl^- ions
 - (4) vacant
 57. The number of nearest neighbours around each particle in a face-centred cubic lattice is :-
 - (1) 4
 - (2) 6
 - (3) 8
 - (4) 12
 58. In the closest packing of atoms A (radius : r_a), the radius of atom B that can be fitted into tetrahedral voids is :-
 - (1) $0.155 r_a$
 - (2) $0.225 r_a$
 - (3) $0.414 r_a$
 - (4) $0.732 r_a$
 59. The oxidation potential of a hydrogen electrode at $\text{pH} = 10$ and $P_{\text{H}_2} = 1$ is :-
 - (1) 0.51 V
 - (2) 0.00 V
 - (3) $+ 0.59 \text{ V}$
 - (4) 0.059 V
 60. KF crystallizes in the NaCl type structure. If the radius of K^+ ions 132 pm and that of F^- ion is 135 pm , what is the closet K–K distance ?
 - (1) Can not say
 - (2) 534 pm
 - (3) 755 pm
 - (4) 378 pm
 61. $r_{\text{Na}^+} = 95 \text{ pm}$ and $r_{\text{Cl}^-} = 181 \text{ pm}$ in NaCl (rock salt) structure. What is the shortest distance between Na^+ and Cl^- ions ?
 - (1) 778.3 pm
 - (2) 276 pm
 - (3) 195.7 pm
 - (4) 390.3 pm
 62. In diamond, carbon atom occupy FCC lattice points as well as alternate tetrahedral voids. If edge length of the unit cell is 356 pm , then radius of carbon atom is :-
 - (1) 77.07 pm
 - (2) 154.14 pm
 - (3) 251.7 pm
 - (4) 89 pm
 63. Xenon crystallises in the face-centred cubic lattice and the edge of the unit cell is 620 pm . What is the next nearest neighbour distance ?
 - (1) 738.5 pm
 - (2) 620 pm
 - (3) 438.5 pm
 - (4) 310 pm
 64. An element crystallizes in a structure having FCC unit cell of an edge 200 pm . Calculate the density, if 200 g of this element contains 5×10^{24} atoms.
 - (1) 5 m/cm^3
 - (2) 30 gm/cm^3
 - (3) 10 gm/cm^3
 - (4) 20 gm/cm^3
 65. If a spoon of copper metal is placed in a solution of ferrous sulphate :-
 - (1) Cu will precipitate out
 - (2) iron will precipitate
 - (3) Cu and Fe will precipitate
 - (4) no reaction will take place
 66. During discharge of a lead storage cell the density of sulphuric acid in the cell :-
 - (1) increasing
 - (2) decreasing
 - (3) remains unchanged
 - (4) initially increases but decreases subsequently

SPACE FOR ROUGH WORK

67. If the solution of the CuSO_4 in which copper rod is immersed is diluted to 10 times, the electrode reduction potential. ($T = 298 \text{ K}$) :-
 (1) increases by 0.030 volt
 (2) decreases by 0.030 volt
 (3) increases by 0.059 volt
 (4) decreases by 0.0059 volt
68. The reduction potential values are given below
 $\text{Al}^{3+} / \text{Al} = -1.67 \text{ volt}$, $\text{Mg}^{2+} / \text{Mg} = -2.34 \text{ volt}$
 $\text{Cu}^{2+} / \text{Cu} = +0.34 \text{ volt}$
 $\text{I}_2 / 2\text{I}^- = +0.53 \text{ volt}$. Which one is the best reducing agent ?
 (1) Al (2) Mg (3) Cu (4) I_2
69. Given standard electrode potentials :
 $\text{Fe}^{3+} + 3\text{e}^- \longrightarrow \text{Fe}$; $E^\circ = -0.036 \text{ volt}$
 $\text{Fe}^{2+} + 2\text{e}^- \longrightarrow \text{Fe}$; $E^\circ = -0.440 \text{ volt}$
 The standard electrode potential E° for $\text{Fe}^{3+} + \text{e}^- \longrightarrow \text{Fe}^{2+}$ is :-
 (1) -0.476 volt (2) -0.404 volt
 (3) 0.440 volt (4) 0.772 volt
70. When the electric current is passed through a cell having an electrolyte, the positive ions move towards cathode and negative ions towards the anode. If the cathode is pulled out of the solution :-
 (1) the positive and negative ions will move towards anode
 (2) the positive ions will start moving towards the anode while negative ions will stop moving
 (3) the negative ions will continue to move towards anode while positive ions will stop moving
 (4) the positive and negative ions will start moving randomly
71. The oxidation potentials of Zn, Cu, Ag, H_2 and Ni are 0.76, -0.34 , -0.80 , 0.00, 0.25 volt respectively. Which of the following reactions will provide maximum voltage :-
 (1) $\text{Zn} + \text{Cu}^{2+} \longrightarrow \text{Cu} + \text{Zn}^{2+}$
 (2) $\text{Zn} + 2\text{Ag}^+ \longrightarrow 2\text{Ag} + \text{Zn}^{2+}$
 (3) $\text{H}_2 + \text{Cu}^{2+} \longrightarrow 2\text{H}^+ + \text{Cu}$
 (4) $\text{H}_2 + \text{Ni}^{2+} \longrightarrow 2\text{H}^+ + \text{Ni}$
72. How many farads of electricity is required to reduce one mol of MnO_4^- to Mn^{2+} :-
 (1) 1 (2) 2 (3) 3 (4) 5
73. $\text{M}^{2+} + 2\text{e}^- \longrightarrow \text{M}$.
 0.275 g of metal M is deposited at the cathode due to passage of 1A of current for 965 s. Hence atomic weight of the metal M is :-
 (1) 27.5 (2) 55.0
 (3) 110.0 (4) 13.75
74. If same quantity of electricity is passed through CuCl and CuSO_4 , the ratio of the weights of Cu deposited from CuSO_4 and CuCl is :-
 (1) 2 : 1 (2) 1 : 2
 (3) 1 : 1 (4) 4 : 1
75. Covalency of Carbon in CCl_4 will be
 (1) 1 (2) 2
 (3) 3 (4) 4
76. Two hybrid orbitals have a bond angle of 120° . The percentage of p character in the hybrid orbital is nearly:-
 (1) 25% (2) 33%
 (3) 50% (4) 66%

SPACE FOR ROUGH WORK

77. Which of the following set do not have sp^3d hybridization

- (1) PF_4^- & BrF_3
- (2) ICl_2^+ & SF_4
- (3) XeF_2 & I_3^-
- (4) AsF_4^- & SCl_4

78. Shape of molecule having 4-bond pair and one lone pair is :-

- (1) Trigonal bipyramidal
- (2) T-Shape
- (3) See-saw
- (4) Square planar

79. Which is the correct decreasing order of covalent nature :-

- (1) $SiCl_4 > AlCl_3 > ZnCl_2 > CaCl_2 > MgCl_2$
- (2) $SiCl_4 > AlCl_3 > MgCl_2 > CaCl_2 > ZnCl_2$
- (3) $ZnCl_2 > SiCl_4 > AlCl_3 > MgCl_2 > CaCl_2$
- (4) $SiCl_4 > AlCl_3 > ZnCl_2 > MgCl_2 > CaCl_2$

80. The emf of the cell

$Zn | Zn^{2+} (0.01 M) || Fe^{2+} (0.001 M) | Fe$
at 298 K is 0.2905 then the value of equilibrium constant for the cell reaction is :-

- (1) $e^{\frac{0.32}{0.0295}}$
- (2) $10^{\frac{0.32}{0.0295}}$
- (3) $10^{\frac{0.26}{0.0295}}$
- (4) $10^{\frac{0.32}{0.0591}}$

81. Consider the following four electrodes,

P = $Cu^{2+} (0.0001 M) / Cu(s)$

Q = $Cu^{2+} (0.1 M) / Cu(s)$

R = $Cu^{2+} (0.01 M) / Cu(s)$

S = $Cu^{2+} (0.001 M) / Cu(s)$

If the standard reduction potential of Cu^{2+} / Cu is 0.34 V, the reduction potential in volts of the above electrodes follow the order :-

- (1) $Q > R > S > P$
- (2) $P > S > R > Q$
- (3) $R > S > Q > P$
- (4) $P > Q > R > S$

82. The standard reduction potentials E° of the following systems are

System	E° (Volts)
(i) $MnO_4^- + 8H^+ + 5e^- \rightarrow Mn^{2+} + 4H_2O$	1.51
(ii) $Sn^{4+} + 2e^- \rightarrow Sn^{2+}$	0.15
(iii) $Cr_2O_7^{2-} + 14H^+ + 6e^- \rightarrow 2Cr^{3+} + 7H_2O$	1.33
(iv) $Ce^{4+} + e^- \rightarrow Ce^{3+}$	1.61

The oxidising power of the various species decreases in the order :-

- (1) $Ce^{4+} > Cr_2O_7^{2-} > Sn^{4+} > MnO_4^-$
- (2) $Ce^{4+} > MnO_4^- > Cr_2O_7^{2-} > Sn^{4+}$
- (3) $Cr_2O_7^{2-} > Sn^{4+} > Ce^{4+} > MnO_4^-$
- (4) $MnO_4^- > Ce^{4+} > Sn^{4+} > Cr_2O_7^{2-}$

83. In order to refine "copper" it is melted in a furnace and it is stirred with green logs of wood. The purpose is :-

- (1) to expel the dissolved gases in blister copper
- (2) to reduce the metallic oxide impurities with hydrocarbon gases liberated from the wood
- (3) to bring the impurities to surface and oxidise them
- (4) to increase the carbon content in copper

SPACE FOR ROUGH WORK

91. Match the column :

Column-I		Column-II	
A.	Venkatraman and Barbar	i.	Father of green revolution
B.	Norman E. Borlaug	ii.	Father of white revolution in India
C.	M.S. Swaminathan	iii.	Father of green revolution in India
D.	Verghese kurien	iv.	Nobilization of cane

- (1) A = (iv), B = (i), C = (iii), D = (ii)
 (2) A = (i), B = (iv), C = (iii), D = (ii)
 (3) A = (i), B = (ii), C = (iii), D = (iv)
 (4) A = (iv), B = (ii), C = (i), D = (iii)

92. Which of the following is/are examples of 'petroleum plants' ?

- (1) Euphorbia
 (2) Jatropha
 (3) Hevea and Calotropis
 (4) All of these

93. Which dye is used during gel electrophoresis

- (1) Ethidium bromide
 (2) Ethidium cyanide
 (3) Bromium ethylene
 (4) None of these

94. To isolate protoplast of plant cells, one needs

- (1) Pectinase
 (2) Cellulase
 (3) Both pectinase and cellulase
 (4) Chitinase

95. Which statement is wrong about down stream processing :

- (1) Down stream processing and quality control testing vary from product to product.
 (2) In case of drugs clinical trials are essential.
 (3) Strict quality control testing for each product is not required.
 (4) None of these.

96. Haploids are more suitable for mutation studies because :

- (1) Haploids are more abundant than diploid
 (2) Haploids are reproductive more stable
 (3) All mutations whether dominant or recessive are expressed in haploids
 (4) Mutagens penetrate haploid more effectively than diploids.

97. In callus culture, root can be induced by supply of

- (1) Ethylene
 (2) Gibberellin
 (3) Cytokinin
 (4) Auxin

98. Which is not true about somatic embryogenesis ?

- (1) Somatic embryos can develop from microspores
 (2) Somatic embryo is induced usually by an auxin such as 2, 4-D
 (3) A somatic embryo develops from a somatic cell
 (4) Pattern of development of a somatic embryo is comparable to that of a zygotic embryo

99. The fermented product is/are :

- (1) Toddy
 (2) Dosa and idli
 (3) Cheese and bread
 (4) All of these

100. Identify A, B, C and D in the table given below

Organism	Biological Name	Commercial Product
A	<i>Sacharomyces</i>	Ethanol
Bacteria	B	Butyric acid
Fungi	<i>Trichoderma polysporum</i>	C
Bacteria	<i>Streptococcus</i>	D

- (1) A = Multicellular fungi,
 B = *Clostridium butylicum*
 C = Cyclosporin-A, D = Streptokinase
 (2) A = Bacteria, B = *Clostridium butylicum*
 C = Cyclosporin – A, D = Streptokinase
 (3) A = Fungi, B = *Bacillus*, C = Ethanol,
 D = Penicillin
 (4) A = Unicellular fungi, B = *Clostridium butylicum*,
 C = Cyclosporin-A, D = Streptokinase

101. The technology of biogas production was developed in India mainly by the contribution of :

- (1) KVIC and IARI
- (2) NEERI and RRI
- (3) KVIC and NEERI
- (4) IARI and NEERI

102. A non-symbiotic biofertilizer is :

- (1) *Rhizobium* and *Frankia*
- (2) *Azospirillum* and *Azotobacter*
- (3) *Rhizobium* and *Azospirillum*
- (4) *Frankia* and *Azotobacter*

103. The vitamin whose content increases following the conversion of milk into curd by lactic acid bacteria is :

- (1) Vitamin C
- (2) Vitamin D
- (3) Vitamin B₁₂
- (4) Vitamin E

104. Match the following list of bioactive substances and their roles :

Bioactive Substance		Rote	
A.	Statin	i.	Removal of oil stains
B.	Cyclosporin-A	ii.	Removal of clots from blood vessels
C.	Streptokinase	iii.	Lowering of blood cholesterol
D.	Lipase	iv.	Immuno-suppressive agent

- (1) A = (ii), B = (iii), C = (i), D = (iv)
- (2) A = (iv), B = (ii), C = (i), D = (iii)
- (3) A = (iv) B = (i), C = (ii), D = (iii)
- (4) A = (iii) B = (iv), C = (ii), D = (i)

105. Methanogens do not produce :

- (1) Oxygen
- (2) Methane
- (3) Hydrogen sulfide
- (4) Carbon dioxide

106. Organic farming does not include :

- (1) Green manures
- (2) Chemical fertilizer
- (3) Crop rotation
- (4) Compost and farmyard manures

107. Which one, is wrongly matched :

- (1) Yeast – Ethanol
- (2) *Streptomyces* – Antibiotics
- (3) Coliforms – Vinegar
- (4) Methanogens – Gobar gas

108. The large holes in 'Swiss cheese' are because of

- (1) *Propionibacterium sharmanii*
- (2) *Sachharomyces cerevisiae*
- (3) *Trichoderma polysporum*
- (4) *Clostridium butylicum*

109. A common biocontrol agent for plant diseases is :

- (1) *Bacillus thuringiensis*
- (2) *Glomus*
- (3) *Trichoderma*
- (4) *Baculovirus*

110. Microbe yielding 'clot buster' for myocardial infarction is :

- (1) *Penicillium notatum*
- (2) *Clostridium butylicum*
- (3) *Streptococcus* species
- (4) *Asotobacter aceti*

111. Ernest Chain and Howard Florey's contribution was :

- (1) Discovery of streptokinase
- (2) Establishment of potential of penicillin as effective drug
- (3) Discovery of DNA sequences
- (4) Isolating the bacterial plasmid

112. Read the following statements about plant breeding

- (A) purposeful genetic manipulation of plants species
- (B) can result in better yields
- (C) selection of suitable plasmid vector is important
- (D) development of disease resistance

Which is/are not related with plant breeding?

- (1) A, C
- (2) B, C
- (3) C, D
- (4) only C

113. Semi-dwarf varieties of rice were derived from

- (1) IR-8 and Taichung Native-11
- (2) IR-8 and Taichung Native-1
- (3) IR-6 and Taichung Native-1
- (4) IR-18 and Taichung Native-1

114. Maize hybrids were developed in the year 2000 with increased amount of amino acids

- (1) lysine and tryptophan
- (2) glycine and tryptophan
- (3) tyrosine and tryptophan
- (4) leucine and tryptophan

115. What property/ies of blue green algae like *Spirulina* can help reduces environmental pollution because they

- (A) they utilize waste water containing starch
- (B) are rich in protein
- (C) are highly nutritious
- (D) are single celled

Select the correct reason.

- (1) A only
- (2) A,B
- (3) A,C
- (4) A,D

116. Given below is figure of a typical biogas plant

- (1) A=Gas, B=Digester, C=Gas holder, D= Dung, E= Sludge, F= water, G= CO₂
- (2) A=Gas, B=Gas holder, C=Digester, D=Sludge, E= Dung, F= water, G= CO₂
- (3) A=Gas, B=Gas holder, C=Digester, D=Sludge, E= Dung, F= water, G= O₂
- (4) A=Gas, B= Digester, C=Gas holder, D= Dung, E= Sludge, F= water, G= CO₂

117. Match the Column

Column-I		Column-II	
a	Pusa Sawani	i	Chilli
b	Pusa Sadabahar	ii	Bhindi
c	Atlas 66	iii	Rice
d	Ratna	iv	Wheat
a	b	c	d
(1) ii	i	iv	iii
(2) i	ii	iii	iv
(3) ii	i	iii	iv
(4) i	ii	iv	iii

118. Which of the following is not a fusogen

- (1) NaNO₃
- (2) PEG
- (3) IAA at pH 5.6
- (4) Ca⁺⁺ at high pH

119. Foundation of Genetic engineering is based on

- (1) discovery of RE (Restriction endonuclease)
- (2) discovery of plasmid
- (3) Activities of DNA polymerase
- (4) both 1 & 2

120. Limitations of a plant breeding is/are in compare of Genetic engineering.

- (1) inclusion of undesirable gene along with desirable gene
- (2) gene transfer within a limited range
- (3) only small size can be transferred
- (4) 1 & 2

121. Disarming of virus prior to use as vector refers to

- (1) removal of virus tail
- (2) removal of coat
- (3) removal of disease causing gene
- (4) removal of some recognition site

122. Non-recombinant transformed cell appear after blue-white screening

- (1) blue
- (2) white
- (3) green
- (4) yellow

123. Sparging in bioreactor facilitates
- (1) increase surface area for protein synthesis
 - (2) increase surface area for oxygen transfer
 - (3) bouyancy of culture media
 - (4) nutrient supply.
124. Elution of DNA refers to
- (1) isolation of DNA from host cell
 - (2) separation of purified DNA thread on Agarose gel
 - (3) to cut out the separated DNA bands
 - (4) cut out the DNA band and Extraction of DNA
125. During PCR reaction, PCR mixture do not contain.....
- (1) taq polymerase
 - (2) nucleosides
 - (3) primers
 - (4) Mg^{+2}
126. Select correct statement
- (1) RE- II cut little away from centre of palindromic site
 - (2) single stranded nucleotide chain appear after RE action.
 - (3) Sticky end oppose activities of DNA ligase
 - (4) RE acts as molecular scissors.
127. A stirred tank bioreacter have curved base which promote
- (1) better stability
 - (2) better volume capacity
 - (3) mixing of reaction mixture
 - (4) better cultural growth
128. RNAi acts
- (1) as cellular defence in all forms of life.
 - (2) as silencing of non-specific m-RNA
 - (3) as silencing of specific t-RNA
 - (4) as post-transcriptional regulation
129. Number of polypeptide chains in mature insulin protein.
- (1) 3
 - (2) 2
 - (3) 1
 - (4) 0
130. Recombinant therapeutics have one of the advantage
- (1) low durability
 - (2) do not induce unwanted immunological responses
 - (3) transgenic animal become disease prone
 - (4) self reaction
131. Select correct statement
- (1) gene of insulin was first time introduced in calf cell
 - (2) insulin protein consist of 2 intra & 1 inter chain disulphide bond
 - (3) Both chain of insulin are produced separately
 - (4) Both chain administered Separately in diabetic patient
132. GM plant shows various useful modification to
- (1) less tolerant against abiotic stress
 - (2) promote post harvest loss
 - (3) increase nutritional quality of crop
 - (4) develops increase reliance on chemical pesticide
133. Plasmid is :
- (1) Autonomously replicating linear extra-chromosomal DNA.
 - (2) Autonomously replicating circular main-chromosomal DNA.
 - (3) Autonomously non-replicating circular extra-chromosomal DNA.
 - (4) Autonomously replicating circular extra-chromosomal DNA.
134. Consider the following statements about pBR322 :
- (i) rop codes for the proteins involved in the replication of host chromosome.
 - (ii) It consist 2 selectable markers eg. amp^R -gene and tet^R -gene.
 - (iii) One selectable marker helps in selecting the transformants.
 - (iv) tet^R -gene gets insertional inactivation by alien DNA.
 - (v) Restriction sites for BamHI and Sall present within amp^R -gene.
- How many statements are wrong :
- (1) 2
 - (2) 1
 - (3) 0
 - (4) 3
135. Restriction endonucleases
- (1) Are used for *in vitro* DNA synthesis
 - (2) Are synthesized by bacteria as part of defense mechanism
 - (3) Are present in mammalian cells for degradation of DNA when the cells dies
 - (4) Are used in genetic engineering for ligating two DNA molecules

136. Early Greek thinkers thought units of life called spores were transferred to different planets including earth from outer space. It is true according to:
- (1) Theory of spontaneous generation
 - (2) Theory of panspermia
 - (3) Theory of special creation
 - (4) Theory of biogenesis
137. Theory of stated that life came out of decaying and rotting matter like mud, straw, etc.
- (1) Special creation
 - (2) Theory of biogenesis
 - (3) Spontaneous generation
 - (4) Panspermia
138. Theory of spontaneous generation was finally disproved by
- (1) Aristotle
 - (2) Empedocles
 - (3) Louis Pasteur
 - (4) Thales
139. All of the following statements are true regarding theory of special creation except :
- (1) All living organisms that we see today were created as such
 - (2) Earth is 40,000 years old
 - (3) Diversity of life was always the same since creation and will be the same in future
 - (4) The theory was supported by Father Suarez
140. In the Miller's experiment the temperature in the spark chamber was
- (1) 500° C
 - (2) 800° C
 - (3) 1500° C
 - (4) 2000° C
141. Who experimentally demonstrated that life comes only from pre-existing life using pre-sterilized flask and killed yeast?
- (1) Miller
 - (2) Oparin
 - (3) Haldane
 - (4) Louis Pasteur
142. The experimental evidence of Oparin-Haldane hypothesis was given by:
- (1) Louis Pasteur
 - (2) S.L. Miller
 - (3) Redi
 - (4) Aristotle
143. Oparin of and Haldane of proposed that life originated from pre-existing non-living organic molecules and that the formation of life was preceded by chemical evolution.
- (1) Germany, Russia
 - (2) England, Russia
 - (3) Russia, England
 - (4) England, Germany
144. Big-Bang theory was proposed by
- (1) Father Suarez
 - (2) Edwin Hubble
 - (3) Abbe Lemaitre
 - (4) Louis Pasteur
145. Abiogenesis means
- (1) Origin of life from pre-existing life
 - (2) Origin of life from non-living matter
 - (3) Origin of viruses
 - (4) Origin of prokaryotes
146. Oparin and Haldane's theory is also called
- (1) Chemical theory of origin of life
 - (2) Theory of primary abiogenesis
 - (3) Naturalistic theory
 - (4) All of the above
147. Miller synthesised simple amino acids from which of the following mixtures in his experiment
- (1) H₂, O₂, CH₄ and water vapour
 - (2) H₂, NH₃, CH₄ and water vapour
 - (3) CH₄, NH₃, O₂ and water vapour
 - (4) H₂, O₂, N₂ and water vapour
148. Miller obtained.....in his experiment.
- (1) NH₃
 - (2) Amino acids
 - (3) Carbohydrate
 - (4) Nitrogen base
149. The first life originated in
- (1) Air
 - (2) Soil
 - (3) Water
 - (4) Mountain

- | | |
|---|---|
| <p>150. The first cellular form of life originated around</p> <ol style="list-style-type: none"> (1) 2000 million years back (2) 3 billion years back (3) 500 million years back (4) 1.5 billion years back <p>151. The most probable explanation regarding appearance of free oxygen on earth is</p> <ol style="list-style-type: none"> (1) Byproduct of photosynthesis by plants (2) Byproduct of photosynthesis by cyanobacteria (3) Break down of ozone by UV rays (4) Released by volcanic eruptions <p>152. Find the correct match regarding Miller's experiment</p> <ol style="list-style-type: none"> (1) Temperature - 80° C (2) Gases - H_2, NH_3, CH_4, O_2 (3) Energy source - Electric discharge (4) Number of electrodes - 4 <p>153. The first living organisms on earth whose presence changed earth's atmosphere from reducing to oxidizing, were</p> <ol style="list-style-type: none"> (1) Anaerobic Chemoheterotrophs (2) Aerobic Chemoautotrophs (3) Non-oxygenic Photosynthesizers (4) Oxygenic Photoautotrophs <p>154. Coacervate belong to the category of</p> <ol style="list-style-type: none"> (1) Cyanobacteria (2) Molecular aggregates with lipid bilayer (3) Molecular aggregates without lipid bilayer (4) Viroids <p>155. Which of the following is not a property of coacervates?</p> <ol style="list-style-type: none"> (1) They are also called protobionts (2) They do not reproduce (3) They are composed of monosaccharides, proteins and nucleic acids (4) They are delimited by a film of water from the external environment | <p>156. Source of energy for chemogeny was</p> <ol style="list-style-type: none"> (1) Lightning (2) UV-rays (3) Volcanic eruptions (4) All of these <p>157. The correct sequence of the substances appeared during the course of origin of life on earth was</p> <ol style="list-style-type: none"> (1) Proteins, amino acids, Glucose, nucleic acids (2) Amino acids, ammonia, phosphates, nucleic acids (3) Ammonia, amino acids, proteins, nucleic acids (4) Nucleic acids, ammonia, proteins, amino acids <p>158. Which of the following amino acids was not produced in Miller's experiment?</p> <ol style="list-style-type: none"> (1) Alanine (2) Aspartic acid (3) Glycine (4) Glutamic acid <p>159. In Miller-Urey experiment, which step was not present in respect to primitive environment of earth :-</p> <ol style="list-style-type: none"> (1) Types of gases used in reaction mixture (2) Presence of oxygen in chamber (3) Ratio of gases used in chamber (4) Electrical discharged as energy source <p>160. Earliest organisms to appear on earth were</p> <ol style="list-style-type: none"> (1) Aerobic chemoheterotrophs (2) Anaerobic chemoheterotrophs (3) Aerobic chemoautotrophs (4) Anaerobic chemoautotrophs <p>161. Life cannot originate from the inorganic materials these days because of</p> <ol style="list-style-type: none"> (1) Absence of raw materials (2) High atmospheric oxygen (3) Low atmospheric hydrogen (4) Presence of ozone |
|---|---|

162. The ratio of hydrogen, ammonia and methane in Miller's experiment was
 (1) 2 : 1 : 1 (2) 2 : 1 : 2
 (3) 1 : 2 : 1 (4) 1 : 2 : 2
163. The first enzyme on primitive earth was
 (1) Protein
 (2) DNA
 (3) RNA
 (4) Carbohydrate
164. Which of the following statement is incorrect regarding origin of life?
 (1) Coacervates are colloid droplets that predominantly contained carbohydrates and proteins
 (2) Microspheres were proposed by Oparin
 (3) The presence of salts in animal body fluids indicate that life originated in primitive ocean
 (4) Miller gave experimental evidence of Oparin-Haldane hypothesis
165. Coacervates mentioned in the biochemical theory of evolution were
 (1) First eukaryotes
 (2) First prokaryotes
 (3) First viroids
 (4) Molecular aggregates formed of carbohydrates and proteins
166. Which of the following is a breed of cattle ?
 (1) Sahiwal
 (2) Tharparkar
 (3) Rathi
 (4) All of these
167. Which is not a result of inbreeding ?
 (1) Increased homozygosity
 (2) Development of pure lines
 (3) Expression of harmful recessive genes
 (4) Increased fertility and productivity due to continued close inbreeding
168. The practice of mating of animals within the same breed but having no common ancestors on either side of their pedigree up to 4-6 generations, is known as-
 (1) Out crossing
 (2) Cross breeding
 (3) Inter species hybridisation
 (4) Inbreeding
169. Hissardale is an example of -
 (1) out cross
 (2) cross breed
 (3) Inbreed
 (4) Inter species hybridisation
170. Which are fertile individuals in the colony of honey bees?
 (1) Queen (2) Drones
 (3) Workers (4) Both 1 & 2
171. Which of the following is an example of milch breed of cow :-
 (1) Sahiwal
 (2) Patanwadi
 (3) Kashmiri pashmina
 (4) Lohi
172. Which of the following is incorrect with respect to poultry.
 (1) Aseel Used in cock fighting
 (2) Viral disease Fowlpox, Ranikhet disease
 (3) Bacterial Fowl cholera, pullorum, thrush disease
 (4) Fungal disease Aflatoxicosis, Aspergillosis.
173. Mule is produced through :-
 (1) Cross breeding
 (2) Out-crossing
 (3) Inter specific hybridization
 (4) Inbreeding
174. Best Milch breed of cattle is :
 (1) Red sindhi
 (2) Deoni
 (3) Sahiwal
 (4) Holstein-Friesian

- | | |
|--|---|
| <p>175. Birds reared for the egg production called as:-</p> <p>(1) Broiler (2) Aseel
(3) Culling (4) Layers</p> <p>176. MOET is related to :-</p> <p>(1) Animal husbandry
(2) Sericulture
(3) Lac culture
(4) Apiculture</p> <p>177. A shahiwal cow normally produce about 15 litres milk in a day. A person lives in Haryana have 20 shaiwal cows. But same sahiwal cows produce only 10 litres milk in a day from them. He wants to increase high yeilding breed of sahiwal cows. For this purpose which one is appropriate best method of animal breeding ?</p> <p>(1) Interspecific hybridisation
(2) Inbreeding
(3) Out-crossing
(4) Cross breeding</p> | <p>178. NDRI stands for :-</p> <p>(1) National daily news research institute
(2) National defense research institute
(3) National disease research institute
(4) National dairy research institute</p> <p>179. Birds specially chicken grown for meat only known as :-</p> <p>(1) Hybrid
(2) Broiler
(3) Bird management
(4) Bird cuttle</p> <p>180. Which of the following is used in case of cattle to induce lactation ?</p> <p>(1) GnRH
(2) LH
(3) FSH
(4) Stilbesterol</p> |
