

CLASSROOM CONTACT PROGRAMME

(ACADEMIC SESSION 2019-2020)

PRE-MEDICAL : ENTHUSIAST COURSE [PHASE-I]

TEST # 06

DATE : 07-07-2019

Test Type : Minor

Test Pattern : NEET

INSTRUCTIONS

Do not open this Test Booklet until you are asked to do so

1. Immediately fill in the form number on this page of the Test Booklet with Blue/Black Ball Point Pen. Use of pencil is strictly prohibited.
2. The candidates should not write their Form Number anywhere else (except in the specified space) on the Test Booklet/Answer Sheet.
3. The test is of **3 hours** duration.
4. The Test Booklet consists of **180** questions. The maximum marks are **720**.
5. There are **three** parts in the question paper A,B,C consisting of **Physics, Chemistry** and **Biology** having **45 questions** each in Physics & Chemistry and **90 questions** in Biology part of equal weightage. Each question is allotted 4 (four) marks for **correct** response.
6. **One Fourth** mark will be deducted for indicated incorrect response of each question. **No deduction** from the total score will be made if no response is indicated for an item in the Answer Sheet.
7. Use **Blue/Black Ball Point Pen only** for writing particulars/markings responses on **Side-1** the Answer Sheet. **Use of pencil is strictly prohibited.**
8. No candidate is allowed to carry any textual material, printed or written, bits of papers, pager, mobile phone any electronic device etc, except the Identity Card inside the examination hall/room.
9. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
10. On completion of the test, the candidate must hand over the Answer Sheet to the invigilator on duty in the Room/Hall. **However, the candidate are allowed to take away this Test Booklet with them.**
11. **Do not fold or make any stray marks on the Answer Sheet.**

Your Target is to secure Good Rank in NEET 2020

MINOR TEST # 06

Topics

DATE : 07 - 07 - 2019

PRE-MEDICAL ENTHUSIAST COURSE : PHASE - I – PATTERN : [NEET]

PHYSICS : Current Electricity, Capacitance, SHM

CHEMISTRY : Organic Chemistry Complete, p-Block, Hydrogen, Some Basic Concepts of Chemistry

 BIOLOGY : Genetics-I, Genetic-II (Upto Spurt Gene), Plant Morphology (Root, Stem and Leaf)
 Immune System (Complete) and Muscle Contraction

SPACE FOR ROUGH WORK

HAVE CONTROL → HAVE PATIENCE → HAVE CONFIDENCE ⇒ 100% SUCCESS

BEWARE OF NEGATIVE MARKING

- The resistance of a wire of uniform diameter d and length L is R . The resistance of another wire of the same material but diameter $2d$ and length $4L$ will be :-
(1) $2R$ (2) R (3) $R/2$ (4) $R/4$
- It is easier to start a car engine on a hot day than on a cold day. This is because the internal resistance of the car battery :-
(1) Decreases with rise in temperature
(2) Increases with rise in temperature
(3) Decreases with a fall in temperature
(4) Does not change with a change in temperature
- A colour coded carbon resistor has the colours orange, blue, green and silver. Its resistance value and tolerance percentage respectively are :-
(1) $36 \times 10^5 \Omega$ and 10%
(2) $36 \times 10^4 \Omega$ and 5%
(3) $63 \times 10^5 \Omega$ and 10%
(4) $35 \times 10^6 \Omega$ and 5%
- A wire of diameter 0.02 metre contains 10^{28} free electrons per cubic metre. For an electrical current of 100 A, the drift velocity of the free electrons in the wire is nearly :-
(1) 1×10^{-19} m/s (2) 5×10^{-10} m/s
(3) 2×10^{-4} m/s (4) 8×10^3 m/s
- If the resistance of a conductor is 5Ω at 50°C and 7Ω at 100°C then the mean temperature coefficient of resistance of the material is :-
(1) $0.008/^\circ\text{C}$ (2) $0.006/^\circ\text{C}$
(3) $0.004/^\circ\text{C}$ (4) $0.001/^\circ\text{C}$
- Two wires of same material having length and radii in the ratio 3 : 4 and 3 : 2 respectively are connected in parallel with a potential source of 6V. The ratio of currents flowing through them, $I_1 : I_2 =$
(1) 1 : 3 (2) 3 : 1 (3) 1 : 2 (4) 2 : 1
- A wire of resistance 12 ohms per meter is bent to form a complete circle of radius 10 cm. The resistance between its two diametrically opposite points A and B as shown in the figure, is :-

(1) $0.6 \pi \Omega$ (2) 3Ω
(3) $6 \pi \Omega$ (4) 6Ω
- In this circuit, the value of I_2 is :-

(1) 0.2 A (2) 0.3 A
(3) 0.4 A (4) 0.6 A
- Three resistors each of 2 ohm are connected together in a triangular shape. The resistance between any two vertices will be :-
(1) $4/3$ ohm (2) $3/4$ ohm
(3) 3 ohm (4) 6 ohm

SPACE FOR ROUGH WORK

10. How many minimum number of $2\ \Omega$ resistance can be connected to have an effective resistance of $1.5\ \Omega$:-

(1) 3 (2) 2 (3) 6 (4) 4

11. If the ammeter in the given circuit reads 2 A, the resistance R is :-

(1) 1 ohm (2) 2 ohm
(3) 3 ohm (4) 4 ohm

12. Resistors of 1, 2, 3 ohm are connected in the form of a triangle. If a 1.5 volt cell of negligible internal resistance is connected across 3 ohm resistor, the current flowing through this resistance will be :-

(1) 0.25 amp (2) 0.5 amp
(3) 1.0 amp (4) 1.5 amp

13. The equivalent resistance of the arrangement of resistances shown in adjoining figure between the point A and B is :-

(1) 6 ohm (2) 8 ohm
(3) 16 ohm (4) 24 ohm

14. In the network of resistors shown in the adjoining figure, the equivalent resistance between A and B is :-

(1) 54 ohm (2) 18 ohm
(3) 36 ohm (4) 9 ohm

15. Three resistance P, Q, R each of $2\ \Omega$ and an unknown resistance S form the four arms of a wheatstone bridge circuit. When a resistance of $6\ \Omega$ is connected in parallel to S the bridge gets balanced. What is the value of S

(1) $2\ \Omega$ (2) $3\ \Omega$
(3) $6\ \Omega$ (4) $1\ \Omega$

16. The equivalent resistance between the points A and B in the following circuit is :-

(1) $3.12\ \Omega$ (2) $1.56\ \Omega$
(3) $6.24\ \Omega$ (4) $12.48\ \Omega$

17. Three resistance each of 1 ohm, are joined in parallel. Three such combinations are put in series, then the resultant resistance will be :-

(1) 9 ohm (2) 3 ohm
(3) 1 ohm (4) $\frac{1}{3}$ ohm

SPACE FOR ROUGH WORK

18. In the circuit shown the value of I in ampere is :-

- (1) 1 (2) 0.60 (3) 0.4 (4) 1.5

19. The resistance between the terminal point A and B of the given infinitely long circuit will be :-

- (1) $(\sqrt{3}-1)$ (2) $(1-\sqrt{3})$
(3) $(1+\sqrt{3})$ (4) $(2+\sqrt{3})$

20. The current in the given circuit is :-

- (1) 8.31 A (2) 6.82 A
(3) 4.92 A (4) 2 A

21. What is the current (i) in the circuit as shown in figure :-

- (1) 2 A (2) 1.2 A
(3) 1 A (4) 0.5 A

22. If a rod has resistance 4Ω and if rod is turned as half circle then the resistance along diameter :-

- (1) 1.56Ω (2) 2.44Ω
(3) 4Ω (4) 2Ω

23. We have a galvanometer of resistance 25Ω . If it is shunted by a 2.5Ω wire. The part of total current that flows through the galvanometer is given as :-

- (1) $\frac{I}{I_0} = \frac{1}{11}$ (2) $\frac{I}{I_0} = \frac{1}{10}$
(3) $\frac{I}{I_0} = \frac{3}{11}$ (4) $\frac{I}{I_0} = \frac{4}{11}$

24. Resistance in the two gaps of a meter bridge are 10 ohm and 30 ohm respectively. If the resistance are interchanged the balance point shifts by :-

- (1) 33.3 cm (2) 66.67 cm
(3) 25 cm (4) 50 cm

25. The energy of a charged capacitor is given by the expression (q = charge on the conductor and C = its capacity)

- (1) $\frac{q^2}{2C}$ (2) $\frac{q^2}{C}$
(3) $2qC$ (4) $\frac{q}{2C^2}$

26. The earth has Volume ' V ' and Surface Area ' A ' then capacitance would be :-

- (1) $4\pi\epsilon_0 \frac{A}{V}$ (2) $4\pi\epsilon_0 \frac{V}{A}$
(3) $12\pi\epsilon_0 \frac{V}{A}$ (4) $12\pi\epsilon_0 \frac{A}{V}$

SPACE FOR ROUGH WORK

27. The energy stored in a condenser of capacity C which has been raised to a potential V is given by :-

- (1) $\frac{1}{2}CV$ (2) $\frac{1}{2}CV^2$ (3) CV (4) $\frac{1}{2VC}$

28. A parallel plate capacitor has uniform electric field E in the space between the plates. If the distance between the plates is d and area of each plate is A , the energy stored in the capacitor is :-

- (1) $\frac{1}{2}\epsilon_0 E^2$ (2) $E^2 Ad/\epsilon_0$
(3) $\frac{1}{2}\epsilon_0 E^2 Ad$ (4) $\epsilon_0 EAd$

29. The capacity of parallel plate condenser depends on :-

- (1) The type of metal used
(2) The thickness of plates
(3) The potential applied across the plates
(4) The separation between the plates

30. The potential to which a conductor is raised, depends on :-

- (1) The amount of charge
(2) Geometry and size of the conductor
(3) Both (1) and (2)
(4) None of these

31. The energy stored in a capacitor of capacitance $100\mu F$ is $50 J$. Its potential difference is :-

- (1) $50 V$ (2) $500 V$
(3) $1000 V$ (4) $1500 V$

32. A particle of mass m is projected with a velocity v making an angle 45° with the horizontal. The magnitude of the angular momentum of the projectile about the point of projection when the particle is at its maximum height h , is :

- (1) zero (2) $\frac{mv^3}{4\sqrt{2}g}$

- (3) $\frac{mv^3}{\sqrt{2}g}$ (4) $m^2\sqrt{2gh^3}$

33. A circular platform is mounted on a frictionless vertical axle. Its radius $R = 2m$ and its moment of inertia about the axle is $200 kg m^2$. It is initially at rest. A $50 kg$ man stands on the edge of the platform and begins to walk along the edge at the speed of $1 ms^{-1}$ relative to the ground. Time taken by the man to complete one revolution is :-

- (1) $2\pi s$ (2) $\frac{\pi}{2}s$
(3) πs (4) $\frac{3\pi}{2}s$

34. A uniform rod AB of length ℓ , and mass m is free to rotate about A . The rod is released from rest in the horizontal position. Given that the moment of inertia of the rod about A is $\frac{m\ell^2}{3}$, the initial angular acceleration of the rod will be :-

- (1) $\frac{3g}{2\ell}$ (2) $\frac{2g}{3\ell}$
(3) $mg\frac{\ell}{2}$ (4) $\frac{3}{2}g\ell$

SPACE FOR ROUGH WORK

|---|--|
| <p>35. A particle performs uniform circular motion with an angular momentum L. If the frequency of particle's motion is doubled and its kinetic energy halved, the angular momentum becomes</p> <p>(1) $2L$ (2) $4L$</p> <p>(3) $\frac{L}{2}$ (4) $\frac{L}{4}$</p> <p>36. A wheel is rolling along the ground with a speed of 5 ms^{-1}. The magnitude of the linear velocity of the points at the extremities of the horizontal diameter of the wheel is equal to</p> <p>(1) $5\sqrt{10} \text{ ms}^{-1}$</p> <p>(2) $5\sqrt{3} \text{ ms}^{-1}$</p> <p>(3) $5\sqrt{2} \text{ ms}^{-1}$</p> <p>(4) 5 ms^{-1}</p> <p>37. Two rods each of mass m and length ℓ are joined at the centre to form a cross. The moment of inertia of this cross about an axis passing through the common centre of the rods and perpendicular to the plane formed by them, is :-</p> <p>(1) $\frac{m\ell^2}{12}$</p> <p>(2) $\frac{m\ell^2}{6}$</p> <p>(3) $\frac{m\ell^2}{3}$</p> <p>(4) $\frac{m\ell^2}{2}$</p> | <p>38. A wheel having moment of inertia 2 kg-m^2 about its vertical axis, rotates at the rate of 60 rpm about the axis. The torque which can stop the wheel's rotation in one minute would be :-</p> <p>(1) $\frac{\pi}{12} \text{ N-m}$</p> <p>(2) $\frac{\pi}{15} \text{ N-m}$</p> <p>(3) $\frac{\pi}{18} \text{ N-m}$</p> <p>(4) $\frac{2\pi}{15} \text{ N-m}$</p> <p>39. A thin circular ring of mass M and radius 'r' is rotating about its axis with a constant angular velocity ω. Four objects each of mass m, are kept gently to the opposite ends of two perpendicular diameters of the ring. The angular velocity of the ring will be :-</p> <p>(1) $\frac{M\omega}{4m}$</p> <p>(2) $\frac{M\omega}{M+4m}$</p> <p>(3) $\frac{(M+4m)\omega}{M}$</p> <p>(4) $\frac{(M+4m)\omega}{M+4m}$</p> |
|---|--|

SPACE FOR ROUGH WORK

40. A simple pendulum performs simple harmonic motion about $X = 0$ with an amplitude A and time period T . The speed of the pendulum at $x = \frac{A}{2}$ will be
- (1) $\frac{\pi A \sqrt{3}}{T}$
 - (2) $\frac{\pi A}{T}$
 - (3) $\frac{\pi A \sqrt{3}}{2T}$
 - (4) $\frac{3\pi^2 A}{T}$
41. The displacement equation of a particle is $x = 3 \sin 2t + 4 \cos 2t$. The amplitude and maximum velocity will be respectively
- (1) 5, 10
 - (2) 3, 2
 - (3) 4, 2
 - (4) 3, 4
42. The potential energy of a particle with displacement X is $U(X)$. The motion is simple harmonic, when (K is a positive constant)
- (1) $U = -\frac{KX^2}{2}$
 - (2) $U = KX^2$
 - (3) $U = K$
 - (4) $U = KX$
43. The potential energy of a particle executing S.H.M. is 2.5 J, when its displacement is half of amplitude. The total energy of the particle be
- (1) 18 J
 - (2) 10 J
 - (3) 12 J
 - (4) 2.5 J
44. The angular velocity and the amplitude of a simple pendulum is ω and a respectively. At a displacement X from the mean position if its kinetic energy is T and potential energy is V , then the ratio of T to V is
- (1) $X^2 \omega^2 / (a^2 - X^2 \omega^2)$
 - (2) $X^2 / (a^2 - X^2)$
 - (3) $(a^2 - X^2 \omega^2) / X^2 \omega^2$
 - (4) $(a^2 - X^2) / X^2$
45. In a simple harmonic oscillator, at the mean position
- (1) Kinetic energy is minimum, potential energy is maximum
 - (2) Both kinetic and potential energies are maximum
 - (3) Kinetic energy is maximum, potential energy is minimum
 - (4) Both kinetic and potential energies are minimum

SPACE FOR ROUGH WORK

46. Find number of electrons present in 34g of $\text{NH}_3(\text{g})$.
(1) $2N_A$ (2) N_A (3) $20 N_A$ (4) $10 N_A$
47. Which physical constant for H_2O has higher magnitude than D_2O ?
(1) Boiling point
(2) temperature at maximum density
(3) dielectric constant
(4) bond dissociation energy
48. Which of the following has greatest number of atoms :-
(1) 1 g of butane (C_4H_{10})
(2) 1 g of Nitrogen (N_2)
(3) 1 g of Silver (Ag)
(4) 1 g of H_2O
49. The Lewis acid nature of BX_3 follows the order:
(1) $\text{BF}_3 > \text{BCl}_3 > \text{BBr}_3 > \text{BI}_3$
(2) $\text{BF}_3 < \text{BCl}_3 < \text{BBr}_3 < \text{BI}_3$
(3) $\text{BCl}_3 > \text{BF}_3 > \text{BBr}_3 > \text{BI}_3$
(4) $\text{BF}_3 < \text{BBr}_3 < \text{BCl}_3 < \text{BI}_3$
50. A mixture having 2 g of hydrogen and 32 g of oxygen occupies how much volume at NTP ?
(1) 44.8 L (2) 22.4 L
(3) 11.2 L (4) 67.2 L
51. The volume occupied by 4.4 gram of CO_2 at STP is :
(1) 22.4 L (2) 2.24 L
(3) 0.224 L (4) 0.1 L
52. The simplest formula of a compound containing 50% of element X (atomic mass 10) and 50% of element Y (atomic mass 20) is :
(1) XY (2) X_2Y (3) XY_3 (4) X_2Y_3
53. Vapour density of a gas is 22. What is its molecular mass?
(1) 33 (2) 22 (3) 44 (4) 11
54. Synthesis gas is :-
(1) $\text{CO}_{(\text{g})} + \text{H}_{2(\text{g})}$
(2) $\text{CO}_{2(\text{g})} + \text{H}_{2(\text{g})}$
(3) $\text{CO}_{(\text{g})} + \text{N}_{2(\text{g})}$
(4) $\text{CO}_{2(\text{g})} + \text{N}_{2(\text{g})}$
55. Consider following statement regarding fullerene.
(a) C_{60} molecule is also known as buckminsterfullerene
(b) C_{60} contains twelve 'six' membered 'ring' and twenty 'five' membered rings
(c) All the carbon atoms are sp^2 hybridized in fullerene.
Correct statement is :-
(1) only (c)
(2) only (a) and (c)
(3) All are correct
(4) only (b) and (c)
56. Which is optically active
- 

(1)

(2)
- 

(3)

(4)

SPACE FOR ROUGH WORK

57.

2 isomers
A & B
Both on ozonolysis
give same products

Identify isomers A and B :-

58. Which of the following is correct order of reactivity for :-

(Electrophilic addition reaction)

(Grignard's reagent)

(Wurtz reaction)

(Halogenation of alkanes)

59. Which is most reactive halide towards S_N^1 reaction :

60. Consider following reaction :-

SPACE FOR ROUGH WORK

61. Most reactive toward acid catalyst dehydration is:-

62. Identify the no. of α -Hydrogen in the given compound?

- (1) 2 (2) 3 (3) 4 (4) 6

63. Which of the following undergoes reduction (By H_2/Ni) at fastest rate

64. $RCOOH + NaHCO_3 \rightarrow RCOONa + H_2O + CO_2$
 CO_2 evolved in reaction comes from

- (1) $RCOOH$
(2) $NaHCO_3$
(3) Both $RCOOH$ and $NaHCO_3$
(4) Aqueous H_2O

65.  $\xrightarrow[(ii) H_3O^+]{(i) CrO_2Cl_2 / CS_2}$ 'A'. Product A in the reaction will be

66. The major product for in the reaction :-

67. Which of the following is non-polar solvent?

68.  $\xrightarrow{\text{Reagent 'X'}}$  Reagent X in the

- given reaction is
(1) $LiAlH_4 + H_2O$
(2) $LiAlD_4 + H_2O$
(3) $LiAlH_4 + D_2O$
(4) $LiAlD_4 + D_2O$

SPACE FOR ROUGH WORK

Product 'B' in the reaction is

- (1) $\text{CH}_3-\text{C}\equiv\text{N}$ (2) $\text{CH}_3-\overset{\text{O}}{\parallel}{\text{C}}-\text{NH}_2$
 (3) CH_3-NH_2 (4) $\text{CH}_3-\text{CH}_2-\text{NH}_2$

Major product of above reaction :

- (1)  (2) CH_3-CH_3
 (3) $\text{CH}_2=\text{CH}_2$ (4) $\text{HC}\equiv\text{CH}$

Major product of above reaction :

- (1) 
 (2) 
 (3) 
 (4) $\text{Cl}-\text{Cyclobutane}-\text{Cyclobutane}-\text{Cl}$

72. Correct statement for the given sequence of reaction is :

- (1) Conversion of (B) to (C) product involve S_N^1 mechanism
 (2) Conversion of (B) to (C) product is Williamson's Synthesis
 (3) Configuration of substrate (A) & that of (C) is different
 (4) Alkyl halide is formed as the final major product

SPACE FOR ROUGH WORK

Structure of (B) is :-

Product of the reaction is :-

(4) None of these

Aspirin Product (B) is :

77. What is the major product of the reaction sequence shown ?

- (1) $(\text{CH}_3)_2\text{CHCH}_2\text{CH}_2\text{OH}$
(2) $(\text{CH}_3)_2\text{CHCHOHCH}_3$
(3) $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{OH}$
(4) $\text{CH}_3\text{CH}_2\text{CH}_2\text{CHOHCH}_3$

SPACE FOR ROUGH WORK

78. In the given reaction sequence

Compound (B) is :-

- (1)  (2) 
(3)  (4) 

79. Correct one :-

- (1)  $\longrightarrow$ yellow Ppt with $+I_2$
(2)  $\longrightarrow$ Fehling solution test [positive]
(3) $\text{Ph}-\text{C}(=\text{O})-\text{NH}_2 \xrightarrow{\text{Br}_2/\text{KOH}} \text{Ph}-\text{CH}_2-\text{NH}_2$
(4)  $\xrightarrow[\text{(iii) H}_3\text{O}^+]{\text{(i) KOH, (ii) R-Br}} \text{R}-\text{NH}_2$

80. Choose the major product of the following reaction.

81. Which of the following is are incorrect :-

82. Which of the following is not a pair of geometrical isomers :-

(4) All

SPACE FOR ROUGH WORK

83. Identify product B in given reaction sequence:-

85. A compound 'X' on reaction with grignard reagent CH_3MgBr followed by hydrolysis gives a compound that can show optical activity. Then the compound X is :-

- (1) Formaldehyde (2) Acetaldehyde
(3) Acetone (4) Propionaldehyde

86. Cumene can be prepared by :-

87. Which one of the following reaction is not feasible ?

SPACE FOR ROUGH WORK

- (1) $\text{CH}_3\text{--CH}_2\text{--CH}_2\text{--CH}_2\text{--CH}_2\text{--OH}$
- (2) $\text{CH}_3\text{--CH=CH--CH}_2\text{--COOH}$
- (3) $\text{CH}_3\text{--CH}_2\text{--CH}_2\text{--CH}_2\text{--CHO}$
- (4) $\text{CH}_3\text{--CH=CH--CH}_2\text{--CHO}$

90. The nitration (using nitration mixture) of aniline gives :

- (1) p-nitroaniline
- (2) o-nitro aniline
- (3) m-nitroaniline
- (4) all of these

SPACE FOR ROUGH WORK

91. A t-RNA is bound to m-RNA. identify A, B and C.

	A	B	C
(1)	Amino-acyl binding site	Anti-codon	Codon
(2)	Ribosomal binding site	Anti-codon	Codon
(3)	Ribosomal binding site	Codon	Anti-codon
(4)	Amino-acyl binding site	Codon	Anti-codon

92. How many of the following statements (A-E) are incorrect?
- (A) In transcription of DNA, adenine pairs with uracil.
- (B) DNA replication occurs during G_1 phase of cell cycle.
- (C) At replication fork, polymerisation occur continuously at template with 3-5' polarity.
- (D) An ideal genetic material should undergo mutations.
- (E) Gametes are always pure in terms of allelic composition.
- (1) None (2) One
(3) Two (4) Three
93. In case of diploid cell if DNA replication is not followed by cell division, then following will result:
- (1) Haploid (2) Polyploid
(3) Aneuploid (4) Diploid.
94. Match the column-I with column-II:

Column I (Process)	Column II (Enzyme involved)
A. Teminism	(i) DNA polymerase
B. Translation	(ii) Peptidyl transferase
C. Transcription	(iii) Reverse-transcriptase
D. Replication	(iv) RNA. polymerase

- (1) A-(ii), B-(iv), C-(iii), D-(i)
(2) A-(iii), B-(ii), C-(iv), D-(i)
(3) A-(iii), B-(i), C-(iv), D-(ii)
(4) A-(ii), B-(iii), C-(i), D-(iv)
95. In a transcription unit of a DNA segment, a promoter is located:
- (1) Towards 5'- end of the structural gene
(2) Towards 3'- end of the structural gene
(3) Towards 5'- end of the terminator
(4) Towards 3'- end of the terminator
96. Structural genes in eukaryotes are:
- (1) Monocistronic without exons and introns
(2) Monocistronic with exons and introns
(3) Polycistronic without exons and introns
(4) Polycistronic with exons and introns
97. Base sequence of m-RNA is similar to except for that uracil will be present in place of thymine in m-RNA.
- (1) Coding strand
(2) Template strand
(3) t-RNA
(4) r-RNA
98. Segment of DNA coding for a polypeptide chain is :
- (1) Exon (2) Intron
(3) Muton (4) Cistron
99. Select the wrong statement:
- (1) Bacteria possess single type of RNA polymerase enzyme
(2) direction of polymerisation is 5' – 3'
(3) Rho factor act as initiation factor
(4) Opening of DNA helix during chain initiation is mediated by RNA polymerase enzyme
100. RNA can act as genetic material in:
- (1) All organisms
(2) All viruses
(3) Some viruses
(4) All bacteria

101. Read the statements (A-D) regarding splicing of m-RNA and answer the question following them:-

- (A) Splicing occur in prokaryotes only.
(B) Splicing involves removal of exons and joining of introns.
(C) By splicing, active mRNA is made more active.
(D) Splicing results in formation of ssDNA on RNA. How many of the above statements are true?

- (1) None (2) One
(3) Two (4) Three

102. During tailing of hnRNA adenylate residues are added to _____ end.

- (1) 5-10, 5' (2) 10-50, 3'
(3) 200-300, 3' (4) 1000-2000, 5'

103. Select the correct statement:

- (1) DNA polymerase has high degree of accuracy
(2) During DNA replication, only one strand of DNA act as template for synthesis of new strand
(3) Taylor has proved by his experiment that DNA is the genetic material
(4) E. coli has 4.6×10^9 bp in its genetic material

104. DNA polymerase enzyme is:

- (1) Very slow with low degree of accuracy
(2) Very slow with high degree of accuracy
(3) Very fast with low degree of accuracy
(4) Very fast with high degree of accuracy

105. In his transforming experiments on mice, Griffith has taken 2 strains of streptococcus pneumonia: R-strain and S-strain. in which of the following case mice will remain alive?

- (1) Heat killed S-strain + R-strain + Proteases injected into mice
(2) Heat killed S-strain + R-strain + RNases injected into mice
(3) Heat killed S-strain + R-strain + DNases injected into mice
(4) DNA from heat killed S-strain + R-strain injected into mice

106. Match the columns:

Column A		Column B	
A.	Taylor and colleagues	(i)	Biochemical characterization of transforming principle
B.	Meischer	(ii)	Nuclein
C.	Crick	(iii)	Central dogma
D.	Avery, Macleod and McCarthy	(iv)	Semi-conservative replication of DNA

- (1) A-(iv), B-(ii), C-(iii), D-(i)
(2) A-(iv), B-(ii), C-(i), D-(iii)
(3) A-(ii), B-(iv), C-(i), D-(iii)
(4) A-(iv), B-(i), C-(iii), D-(ii)

107. Take 1 = DNA, 2 = 300 nm Chromatin fibre, 3 = Chromosome, 4 = Nucleosome and 5 = 30 nm Chromatin fibre.

Which of the following sequence is correctly indicating the increasing level of arrangement?

- (1) 1 → 4 → 5 → 2 → 3
(2) 1 → 4 → 2 → 5 → 3
(3) 4 → 1 → 5 → 2 → 3
(4) 4 → 1 → 3 → 5 → 2

108. In prokaryotes like E.coli 1.... charged DNA is present in large loops held by2..... charged3..... to form nucleoid.

- (1) 1-Positively, 2-Negatively, 3-Fatty acids
(2) 1-Negatively, 2-Positively, 3-Proteins
(3) 1-Negatively, 2-Positively, 3-Fatty acids
(4) 1-Positively, 2-Negatively, 3-Proteins

109. Read the paragraph and select the option with correct indications:

t-RNA is also known as s-RNA which means1..... RNA. Secondary structure of t-RNA is2..... while the actual structure is like3..... t-RNA possess two sites4..... (site for binding of amino acids) and5..... (having base sequences complimentary to codons). There are6..... t-RNAs to read the stop codons.

- (1) 1-Supplement, 3-L-shaped, 6-no
(2) 1-Soluble, 2-L-shaped, 5-Anticodon loop
(3) 2-Cloverleaf shaped, 4-Amino acid acceptor end, 6-Three
(4) 2-Cloverleaf shaped, 3-L-shaped, 5-Anticodon loop

110. Read the following statements (A-E) and answer the question following :

- (A) In DNA, adenine is connected to uracil by two hydrogen bonds.
- (B) In human, 6.6×10^9 bp are present in a cell.
- (C) Reverse transcription is observed in some bacteria.
- (D) Pitch of DNA helix is 0.34 nm.
- (E) Cytidine is a nucleotide.

How many of the above statements are false?

- (1) One
- (2) Two
- (3) Three
- (4) Four

111. A free phosphate moiety can be observed at one end of a polynucleotide chain attached to:

- (1) 3'-end of pentose sugar
- (2) 5'-end of pentose sugar
- (3) 3'-end of nitrogenous base
- (4) 5'-end of nitrogenous base.

112. dGMP consist of :

- (1) Guanine + Ribose sugar
- (2) Guanine + Ribose sugar + Phosphate
- (3) Guanine + Deoxyribose sugar
- (4) Guanine + Deoxyribose sugar + Phosphate

113. Select the incorrect statement about DNA

- (1) DNA is an acidic substance
- (2) DNA act as genetic material in most of organisms
- (3) In bacteriophage λ , 48502 base pairs are found in DNA
- (4) F. Meischer first identified the DNA in 1829

114. In some plants, roots may become respiratory. Such roots are known as(i).....and are found in (ii)

- (1) (i)-Prop roots, (ii)-Banyan
- (2) (i)-Stilt roots, (ii)-Sugarcane
- (3) (i)-Pneumatophores, (ii)-Rhizophora
- (4) (i)-Mechanical roots, (ii)-Maize

115. Select the wrong statement:

- (1) In Ginger, stem is modified for storage
- (2) Tap roots of turnip are modified for storage
- (3) Stilt roots in sugarcane provide mechanical support
- (4) In Opuntia fleshy, photosynthetic and flattened structures are leaves

116. A, B, C and D are parts of plants modified for storage. Select the option with incorrect identification of plant and the part of plant which is shown as modified :

- (1) A is ginger, storage part is modified stem
- (2) B is Colocasia, storage part is modified stem
- (3) C is turnip, storage part is modified tap root
- (4) D is sweet potato, storage part is modified stem

117. Arrangement of leaves on stem is known as :

- (1) Inflorescence
- (2) Aestivation
- (3) Venation
- (4) None of these

118. A compound leaf is shown in adjacent diagram :

Select the option with correct identification of type of leaf and one of its example in which it is found.

- (1) Pinnately compound, Peepal
- (2) Pinnately compound, Clematis
- (3) Palmately compound, Banana
- (4) Palmately compound, Silk cotton

119. Phenotype of an organism is the result of

- (1) genotype and environment interactions
- (2) mutations and linkages
- (3) cytoplasmic effects and nutrition
- (4) environmental changes and sexual dimorphism

120. Male human is heterozygous for autosomal genes A and B and is also hemizygous for hemophilic gene h. What proportion of his sperms will be abh?

- (1) $\frac{1}{8}$
- (2) $\frac{1}{32}$
- (3) $\frac{1}{16}$
- (4) $\frac{1}{4}$.

121. One of the parents of a cross has a mutation in its mitochondria. In that cross, that parent is taken as a male. During segregation of F_2 progenies that mutation is found in

- (1) one-third of the progenies
- (2) none of the progenies
- (3) all the progenies
- (4) fifty percent of the progenies.

122. Two crosses between the same pair of genotypes or phenotypes in which the sources of the gametes are reversed in one cross, is known as

- (1) test cross
- (2) reciprocal cross
- (3) dihybrid cross
- (4) reverse cross

123. Which of the following is an example of pleiotropy ?

- (1) haemophilia
- (2) thalassemia
- (3) sickle cell anaemia
- (4) colour blindness.

124. Ratio of complementary genes is

- (1) 9 : 3 : 4
- (2) 12 : 3 : 1
- (3) 9 : 3 : 3 : 4
- (4) 9 : 7

125. Independent assortment of genes does not take place when

- (1) genes are located on homologous chromosomes
- (2) genes are linked and located on same chromosome
- (3) genes are located on non-homogenous chromosome
- (4) all the above.

126. If Mendel had studied the seven traits using a plant with 12 chromosomes instead of 14, in what way would his interpretation have been different?
- (1) he would not have discovered the law of independent assortment
 - (2) he would have discovered sex linkage
 - (3) he could have mapped the chromosome
 - (4) he would have discovered blending or incomplete dominance.
127. Pea plants can
- (1) self-pollinate, but are not self-compatible
 - (2) self-fertilize
 - (3) only cross-fertilize
 - (4) reproduce without pollination
128. In humans pointed eyebrows are dominant to smooth eyebrows and widow's peak (downward pointed frontal hairline) is dominant to continuous hairline. What phenotypic ratio would you expect in the offspring from a cross between an individual heterozygous for both genes and an individual homozygous recessive for both genes?
- (1) 9 : 3 : 3 : 1
 - (2) 1 : 1 : 1 : 1
 - (3) 9 : 3 : 4
 - (4) 12 : 3 : 1
129. Which of these are correct?
- (a) Guava - spiral phyllotaxy,
 - (b) Ruscus - Cladode,
 - (c) Opuntia - phylloclade,
 - (d) Mustard - spiral phyllotaxy.
- (1) a, b, c
- (2) b, c, d
- (3) a, c, d
- (4) a, b, d
130. Fleshy adventitious roots are found in
- (1) Potato and onion
 - (2) Dahlia and sweet potato
 - (3) Radish and carrot
 - (4) Turnip and rice
131. A runner of water with one thick internode found in aquatic rosette plants like Eichhornia(water hyacinth) is called as
- (1) stolon
 - (2) offset
 - (3) both correct
 - (4) trailer
132. Vegetative propagation in mint occurs by
- (1) Runner
 - (2) Offset
 - (2) Rhizome
 - (4) Sucker
133. Roots developed from parts of the plant other than radicle are called
- (1) Tap roots
 - (2) Fibrous roots
 - (3) Adventitious roots
 - (4) Nodular roots
134. Identify mismatch among the following :-
- (1) Carrot – Root
 - (2) Asparagus – Leaf
 - (3) Radish – Root
 - (4) Potato – Stem
135. In which of the following tendrils are modification of leaf
- (1) Cucumber
 - (2) Peas
 - (3) Pumpkins
 - (4) Watermelons

136. Which portion of an antibody provides antigen-binding sites?
 (1) Light chain (2) Constant portion
 (3) Heavy chain (4) Variable portion
137. The overall ability of the to fight the by a system is called :
 (1) host, pathogen, immunity
 (2) pathogen, host, immunisation
 (3) Immunity, host, pathogen
 (4) host, immunity, vaccination
138. Innate immunity is :
 (1) Specific
 (2) Non-specific
 (3) Sometimes specific
 (4) (2) & (3) both
139. Which of the following is not one of the three main antigen-presenting cell types?
 (1) Dendritic cell (2) B-Lymphocytes
 (3) Natural killer cell (4) Macrophages
140. PMNL and natural killer cells are example of which type of barrier :
 (1) Physiological (2) Cellular
 (3) Physical (4) None
141. Identify the structure A, B, C & D in antibody molecule:

- (1) A = Heavy Chain, B = Light chain, C = Antigen binding site, D = disulphide bond
 (2) A = Heavy Chain, B = Light chain, C = disulphide bond, D = Antigen binding site
 (3) A = Light chain, B = Heavy Chain, C = disulphide bond, D = Antigen binding site
 (4) A = Antigen binding site, B = Heavy Chain, C = disulphide bond, D = Light chain

142. Which immune response is quick and highly intensified:
 (1) Primary
 (2) Secondary
 (3) Anamnestic
 (4) (2) & (3) both
143. If you suspect major deficiency of antibodies in a person, to which of the following would you look for confirmatory evidence :
 (1) Haemocytes
 (2) Serum albumines
 (3) Serum globulins
 (4) Fibrinogen in plasma
144. Small proteins produced by vertebrate cells naturally in response to viral infections and which inhibit the multiplication of viruses are called :
 (1) Immunoglobulins
 (2) Interferons
 (3) Antitoxins
 (4) Lipoproteins
145. Monocytes move from the systemic circulatory system into general connective tissues, where they differentiate into what phagocytic cell type?
 (1) Macrophage
 (2) T cell
 (3) B cell
 (4) Neutrophil
146. Complete the following analogy T-cell : cell mediated :: B-cell
 (1) Primary
 (2) Secondary
 (3) Humoral
 (4) Inflammatory

147. How does vaccination work :

- (1) The immune system produces antibodies which not stay in blood
- (2) Memory lymphocyte are produced. They remain in the blood to fight off any future infection with the live pathogen
- (3) The dead pathogen stay in the body and constantly stimulate immune system
- (4) All of these

148. In which one of the following options, the two examples are correctly matched with their particular type of immunity :

Example	Type of immunity
(1) Polymorpho nuclear leucocytes and monocytes	Cellular barrier
(2) Anti-tetanus and anti-snake bite injection	Active immunity
(3) Saliva in mouth and tears in eyes	Physical barreirs
(4) Mucus coating of epithelium of urino-genital tract and HCl in stomach	Physiological barrier

149. Short lived immunity acquired from mother to foetus across placenta or through mother's milk to the infant is characterized as :

- (1) Active immunity
- (2) Passive immunity
- (3) Cellular immunity
- (4) Innate non-specific immunity

150. Which of the following organs is primarily concerned with immunity :

- (1) Liver
- (2) Lymphatic tissue
- (3) Kidney
- (4) Thyroid

151. The cells which suppress the entire immune system from its attack in the same body are known as :

- (1) Helper T-cells
- (2) killer B-cells
- (3) Suppressor B-cells
- (4) Suppressor T-cells

152. Vaccination protects a person from disease because it :

- (1) Helps in better digestion
- (2) Increases RBC count
- (3) Produces antibodies
- (4) Corrects body heating system

153. B-cells are stimulated to produce antibodies by -

- (1) Killer cells
- (2) Suppressor cells
- (3) Cytotoxic cells
- (4) Helper cells

154. Interferons are -

- (1) Anti bacterial proteins
- (2) Anti viral proteins
- (3) Anti helminthic proteins
- (4) Anti fungal proteins

155. In which lymphoid organ, immature lymphocytes differentiate into antigen sensitive lymphocytes?

- (1) Spleen and tonsils
- (2) Peyer's patches and MALT
- (3) Thymus and bone marrow
- (4) Appendix and spleen

156. The immunity provided to new born infant by colostrum is -

- (1) Active, Natural
- (2) Active, Artificial
- (3) Passive, Artificial
- (4) Passive , Natural

157. Production of which type of antibodies is stimulated by allergens ?

- | | |
|----------|----------|
| (1) Ig A | (2) Ig G |
| (3) Ig D | (4) Ig E |

158. Cell mediated immunity is provided by -

- (1) B- lymphocytes
- (2) T- Lymphocytes
- (3) Plasma cells
- (4) B- Memory cells

159. Which of the following cell types of the innate immune system does not perform phagocytosis?

- (1) Neutrophils
- (2) Basophils
- (3) Macrophages
- (4) Eosinophils

160. Anamnestic response of immune system is due to -

- (1) B- lymphocytes
- (2) T-lymphocytes
- (3) T-helper cells only
- (4) Both (1) and (2)

161. When killed or attenuated pathogens are introduced during vaccination, immunological response is generated along with memory cells. It is an example of

- (1) Artificial acquired active immunity
- (2) Artificial acquired passive immunity
- (3) Natural acquired active immunity
- (4) Natural acquired passive immunity

162. Which of the following is incorrectly matched wrt, Immunoglobulin and its properties?

- (1) IgG-Provides passive immunity to foetus
- (2) IgE-Levels increase in allergic reactions
- (3) IgM-Present in colostrum
- (4) IgA-Provides surface immunity

163. Which of the following are examples of passive immunity?

- (i) Presence of IgA in colostrum
- (ii) Anti-tetanus serum
- (iii) Tetanus toxoid vaccination
- (iv) Antibiotic injection to patient with pneumonia
- (v) Anti - venom given to patients with snake bite

- (1) (i), (ii) and (v)
- (2) (i), (ii), (iii) and (v)
- (3) (ii), (iii) and (iv)
- (4) (ii), (iii) and (v)

164. Major histocompatibility complex-II (MHC-II) refers to a large group of genes that code for proteins that play an essential role in which of the following?

- (1) Phagocytosis by macrophages
- (2) Antigen presentation to T lymphocytes
- (3) Phagocytosis by neutrophils
- (4) Antigen presentation to B lymphocytes

165. Mark the correct statement regarding innate immunity.

- (1) Interferons constitute the cytokine barrier of immunity
- (2) Tears and saliva constitute the anatomical barrier
- (3) B- and T-lymphocytes form the cellular barrier
- (4) Interferons protect against specific bacterial infections

166. Match the following column and choose correct combination

Column-I	Column-II
(a) Alexander Fleming	(p) Father of Immunity
(b) Louis Pasteur	(q) Father of passive immunization
(c) Edward Jenner	(r) Pasteurization
(d) Von Behring	(s) Father of antibiotics

- (1) a=p, b=q, c=r, d=s
- (2) a=s, b=r, c=q, d=p
- (3) a=s, b=r, c=p, d=q
- (4) a=r, b=s, c=p, d=q

167. Number of polypeptide chains present in IgM antibody?

- (1) 4
- (2) 5
- (3) 10
- (4) 20

168. Which of the following cells can non-specifically kill virus infected cells and some tumour cells of the body by creating perforin lined pores in the plasma membrane of the target cells?
- Helper T-lymphocytes
 - Cytotoxic T-cells
 - B - lymphocytes
 - Natural killer cells
169. Receptors on B-lymphocytes recognize discrete sites on antigens called
- Epitope
 - Paratope
 - Antigen determinant site
 - Both (1) and (3)
170. Factors like body temperature, low pH in stomach, tears in eyes and various body secretions, prevent growth of many pathogens in body. These factors are included in
- Natural passive immunity
 - Artificial passive immunity
 - Innate physiological barrier
 - Innate anatomical barrier
171. Skeletal muscle fibre is covered with a plasma membrane called
- Axolemma
 - Sarcolemma
 - Sarcomere
 - Sarcosomes
172. Ions used for muscle contraction are
- Na^+ and Ca^{2+}
 - Ca^{2+} and Mg^{2+}
 - Mg^{2+} and Na^+
 - Ca^{2+} and K^+
173. Contraction of Skeletal muscle is initiated by binding of calcium to
- Actin
 - Troponin
 - Tropomyosin
 - Myosin
174. Thin filaments of Skeletal muscle have all of the following proteins except
- Actin
 - Myosin
 - Troponin
 - Tropomyosin
175. The total number of muscles in body are
- 437
 - 439
 - 539
 - 639
176. During the resting stage of muscle fibres, tropomyosin partially covers
- Actin binding site on myosin
 - Myosin binding site on actin
 - ATP binding site on myosin
 - Calcium binding state on troponin
177. Red muscle fibres:
- Are called anaerobic muscles
 - Possess very few mitochondria
 - Are rich in myoglobin
 - Are rich in sarcoplasmic reticulum
178. Which of the following describes the role of calcium during contraction of Skeletal muscles?
- Bind with motor end plate to cause influx of sodium
 - Bind with myosin head to form cross bridges
 - Bind with troponin so that the myosin head binding sites on actin are exposed,
 - All of the above
179. Which of the following is the correct sequence of structures related with Skeletal muscle
- Muscle fibre - Myofibril - Muscle bundle - Myofilament
 - Myofibril - Muscle fibre - Myofilament - Muscle bundle
 - Muscle bundle - Muscle fibre - Myofilament - Myofibril
 - Muscle bundle - Muscle fibre - Myofibril - Myofilament
180. The regulatory proteins of Skeletal muscles are
- Actin and myosin
 - Actin and troponin
 - Troponin and tropomyosin
 - Myosin and troponin
