

CLASSROOM CONTACT PROGRAMME

(ACADEMIC SESSION 2019-2020)

PRE-MEDICAL : ENTHUSIAST COURSE [PHASE-II]

TEST # 05

DATE : 21-07-2019

Test Type : Minor

Test Pattern : NEET

INSTRUCTIONS

Do not open this Test Booklet until you are asked to do so

1. Immediately fill in the form number on this page of the Test Booklet with Blue/Black Ball Point Pen. Use of pencil is strictly prohibited.
2. The candidates should not write their Form Number anywhere else (except in the specified space) on the Test Booklet/Answer Sheet.
3. The test is of **3 hours** duration.
4. The Test Booklet consists of **180** questions. The maximum marks are **720**.
5. There are **three** parts in the question paper A,B,C consisting of **Physics, Chemistry** and **Biology** having **45 questions** each in Physics & Chemistry and **90 questions** in Biology part of equal weightage. Each question is allotted 4 (four) marks for **correct** response.
6. **One Fourth** mark will be deducted for indicated incorrect response of each question. **No deduction** from the total score will be made if no response is indicated for an item in the Answer Sheet.
7. Use **Blue/Black Ball Point Pen only** for writing particulars/markings responses on **Side-1** the Answer Sheet. **Use of pencil is strictly prohibited.**
8. No candidate is allowed to carry any textual material, printed or written, bits of papers, pager, mobile phone any electronic device etc, except the Identity Card inside the examination hall/room.
9. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
10. On completion of the test, the candidate must hand over the Answer Sheet to the invigilator on duty in the Room/Hall. **However, the candidate are allowed to take away this Test Booklet with them.**
11. **Do not fold or make any stray marks on the Answer Sheet.**

Your Target is to secure Good Rank in NEET 2020

SPACE FOR ROUGH WORK

HAVE CONTROL → HAVE PATIENCE → HAVE CONFIDENCE ⇒ 100% SUCCESS

BEWARE OF NEGATIVE MARKING

- The resistivity of iron is $1 \times 10^{-7} \text{ ohm-m}$. The resistance of a iron wire of particular length and thickness is 1 ohm . If the length and the diameter of wire both are doubled, then the resistivity in ohm-m will be
 - 1×10^{-7}
 - 2×10^{-7}
 - 4×10^{-7}
 - 8×10^{-7}
- When the length and area of cross-section both are doubled, then its resistance
 - Will become half
 - Will be doubled
 - Will remain the same
 - Will become four times
- Drift velocity v_d varies with the intensity of electric field as per the relation
 - $v_d \propto E$
 - $v_d \propto \frac{1}{E}$
 - $v_d = \text{constant}$
 - $v_d \propto E^2$
- On increasing the temperature of a conductor, its resistance increases because
 - Relaxation time decreases
 - Mass of the electrons increases
 - Electron density decreases
 - None of the above
- When there is an electric current through a conducting wire along its length, then an electric field must exist
 - Outside the wire but normal to it
 - Outside the wire but parallel to it
 - Inside the wire but parallel to it
 - Inside the wire but normal to it
- Resistance of tungsten wire at 150°C is 133Ω . Its resistance temperature coefficient is $0.0045/^\circ\text{C}$. The resistance of this wire at 500°C will be
 - 180Ω
 - 225Ω
 - 258Ω
 - 317Ω
- In the figure a carbon resistor has bands of different colours on its body as mentioned in the figure. The value of the resistance is

 - $2.2 \text{ k} \Omega$
 - $3.3 \text{ k} \Omega$
 - $5.6 \text{ k} \Omega$
 - $9.1 \text{ k} \Omega$
- Two wires of same material have length L and $2L$ and cross-sectional areas $4A$ and A respectively. The ratio of their specific resistance would be
 - $1 : 2$
 - $8 : 1$
 - $1 : 8$
 - $1 : 1$

SPACE FOR ROUGH WORK

9. When a potential difference is applied across the ends of a linear metallic conductor

- (1) The free electrons are accelerated continuously from the lower potential end to the higher potential end of the conductor
- (2) The free electrons are accelerated continuously from the higher potential end to the lower potential end of the conductor
- (3) The free electrons acquire a constant drift velocity from the lower potential end to the higher potential end of the conductor
- (4) The free electrons are set in motion from their position of rest

10. The potential difference between points A and B of adjoining figure is

- (1) $\frac{2}{3}V$
- (2) $\frac{8}{9}V$
- (3) $\frac{4}{3}V$
- (4) $2V$

11. The current in the adjoining circuit will be

- (1) $\frac{1}{45}$ ampere
- (2) $\frac{1}{15}$ ampere
- (3) $\frac{1}{10}$ ampere
- (4) $\frac{1}{5}$ ampere

12. There are 8 equal resistances R . Two are connected in parallel, such four groups are connected in series, the total resistance of the system will be

- (1) $R/2$
- (2) $2R$
- (3) $4R$
- (4) $8R$

13. A current of 2 A flows in a system of conductors as shown. The potential difference ($V_A - V_B$) will be

- (1) $+2V$
- (2) $+1V$
- (3) $-1V$
- (4) $-2V$

14. The reading of the ammeter as per figure shown is

- (1) $\frac{1}{8}A$
- (2) $\frac{3}{4}A$
- (3) $\frac{1}{2}A$
- (4) $2A$

15. Four resistances are connected in a circuit in the given figure. The electric current flowing through 4 ohm and 6 ohm resistance is respectively

- (1) 2 amp and 4 amp
- (2) 1 amp and 2 amp
- (3) 1 amp and 1 amp
- (4) 2 amp and 2 amp

SPACE FOR ROUGH WORK

16. Resistances of $6\ \Omega$ each are connected in the manner shown in adjoining figure. With the current $0.5\ \text{ampere}$ as shown in figure, the potential difference $V_P - V_Q$ is

- (1) $3.6\ \text{V}$ (2) $6.0\ \text{V}$
(3) $3.0\ \text{V}$ (4) $7.2\ \text{V}$
17. In the network of resistors shown in the adjoining figure, the equivalent resistance between A and B is

- (1) $54\ \Omega$
(2) $18\ \Omega$
(3) $36\ \Omega$
(4) $9\ \Omega$
18. The current from the battery in circuit diagram shown is

- (1) $1\ \text{A}$ (2) $2\ \text{A}$
(3) $1.5\ \text{A}$ (4) $3\ \text{A}$

19. In the figure given below, the current passing through $6\ \Omega$ resistor is

- (1) $0.40\ \text{ampere}$
(2) $0.48\ \text{ampere}$
(3) $0.72\ \text{ampere}$
(4) $0.80\ \text{ampere}$
20. Three equal resistances each of value R are joined as shown in the figure. The equivalent resistance between M and N is

- (1) R (2) $2R$
(3) $\frac{R}{2}$ (4) $\frac{R}{3}$
21. If each resistance in the figure is of $9\ \Omega$ then reading of ammeter is

- (1) $5\ \text{A}$ (2) $8\ \text{A}$
(3) $2\ \text{A}$ (4) $9\ \text{A}$

SPACE FOR ROUGH WORK

22. In the figure given the value of x resistance will be, when the p.d. between B and D is zero

- (1) 4 ohm (2) 6 ohm
(3) 8 ohm (4) 9 ohm

23. Thirteen resistances each of resistance R ohm are connected in the circuit as shown in the figure below. The effective resistance between A and B is

- (1) $2R \Omega$ (2) $\frac{4R}{3} \Omega$ (3) $\frac{2R}{3} \Omega$ (4) $\frac{R}{3} \Omega$

24. The figure below shows currents in a part of electric circuit. The current i is

- (1) 1.7 amp (2) 3.7 amp
(3) 1.3 amp (4) 1 amp

25. If six identical cells each having an e.m.f. of $6V$ are connected in parallel, the e.m.f. of the combination is

- (1) 1 V
(2) 36 V
(3) $\frac{1}{6} V$
(4) 6 V

26. The maximum power drawn out of the cell from a source is given by (where r is internal resistance)

- (1) $E^2 / 2r$
(2) $E^2 / 4r$
(3) E^2 / r
(4) $E^2 / 3r$

27. A cell of constant e.m.f. first connected to a resistance R_1 and then connected to a resistance R_2 . If power delivered in both cases is then the internal resistance of the cell is

- (1) $\sqrt{R_1 R_2}$
(2) $\sqrt{\frac{R_1}{R_2}}$
(3) $\frac{R_1 - R_2}{2}$
(4) $\frac{R_1 + R_2}{2}$

SPACE FOR ROUGH WORK

28. Four charges are arranged at the corners of a square $ABCD$, as shown in the adjoining figure. The force on the charge kept at the centre O is

- (1) Zero
(2) Along the diagonal AC
(3) Along the diagonal BD
(4) Perpendicular to side AB
29. When 10^{19} electrons are removed from a neutral metal plate, the electric charge on it is
- (1) -1.6 C
(2) $+1.6\text{ C}$
(3) 10^{+19} C
(4) 10^{-19} C
30. A uniform electric field having a magnitude E_0 and direction along the positive x -axis exists. If the potential V is zero at $x = 0$, then its value at $x = +x$ will be
- (1) $V_{(x)} = +xE_0$
(2) $V_x = -xE_0$
(3) $V_x = +x^2E_0$
(4) $V_x = -x^2E_0$

31. Figure shows the electric lines of force emerging from a charged body. If the electric field at A and B are E_A and E_B respectively and if the displacement between A and B is r then

- (1) $E_A > E_B$
(2) $E_A < E_B$
(3) $E_A = \frac{E_B}{r}$
(4) $E_A = \frac{E_B}{r^2}$
32. A charge particle is free to move in an electric field. It will travel
- (1) Always along a line of force
(2) Along a line of force, if its initial velocity is zero
(3) Along a line of force, if it has some initial velocity in the direction of an acute angle with the line of force
(4) None of the above

SPACE FOR ROUGH WORK

33. A metallic solid sphere is placed in a uniform electric field. The lines of force follow the path(s) shown in figure as

- (1) 1 (2) 2
(3) 3 (4) 4
34. The electric potential V is given as a function of distance x (metre) by $V = (5x^2 + 10x - 9) \text{ volt}$. Magnitude of electric field at $x = 1$ is
- (1) 20 V/m
(2) 6 V/m
(3) 11 V/m
(4) -23 V/m
35. The torque acting on a dipole of moment $\vec{p}$ in an electric field $\vec{E}$ is
- (1) $\vec{p} \cdot \vec{E}$
(2) $\vec{p} \times \vec{E}$
(3) Zero
(4) $\vec{E} \times \vec{p}$
36. The electric field at a point on equatorial line of a dipole and direction of the dipole moment
- (1) Will be parallel
(2) Will be in opposite direction
(3) Will be perpendicular
(4) Are not related

37. Two opposite and equal charges $4 \times 10^{-8} \text{ coulomb}$ when placed $2 \times 10^{-2} \text{ cm}$ away, form a dipole. If this dipole is placed in an external electric field $4 \times 10^8 \text{ newton/coulomb}$, the value of maximum torque and the work done in rotating it through 180° will be

- (1) $64 \times 10^{-4} \text{ Nm}$ and $64 \times 10^{-4} \text{ J}$
(2) $32 \times 10^{-4} \text{ Nm}$ and $32 \times 10^{-4} \text{ J}$
(3) and
(4) and

38. Electric charge is uniformly distributed along a long straight wire of radius 1 mm . The charge per cm length of the wire is $Q \text{ coulomb}$. Another cylindrical surface of radius 50 cm and length 1 m symmetrically encloses the wire as shown in the figure. The total electric flux passing through the cylindrical surface is

- (1) $\frac{Q}{\epsilon_0}$ (2) $\frac{100Q}{\epsilon_0}$
(3) $\frac{10Q}{(\pi\epsilon_0)}$ (4) $\frac{100Q}{(\pi\epsilon_0)}$

SPACE FOR ROUGH WORK

39. q_1, q_2, q_3 and q_4 are point charges located at points as shown in the figure and S is a spherical Gaussian surface of radius R . Which of the following is true according to the Gauss's law

- (1) $\oint_S (\vec{E}_1 + \vec{E}_2 + \vec{E}_3) \cdot d\vec{A} = \frac{q_1 + q_2 + q_3}{2\epsilon_0}$
 (2) $\oint_S (\vec{E}_1 + \vec{E}_2 + \vec{E}_3) \cdot d\vec{A} = \frac{(q_1 + q_2 + q_3)}{\epsilon_0}$
 (3) $\oint_S (\vec{E}_1 + \vec{E}_2 + \vec{E}_3) \cdot d\vec{A} = \frac{(q_1 + q_2 + q_3 + q_4)}{\epsilon_0}$

(4) None of the above

40. Two plane mirrors are inclined at an angle of 72° . The number of images of a point object is symmetrically placed between them will be

(1) 2 (2) 3 (3) 4 (4) 5

41. Which one of the following statements is true

- (1) An object situated at the principle focus of a concave lens will have its image formed at infinity
 (2) Concave mirror can give diminished virtual image
 (3) Given a point source of light, a convex mirror can produce a parallel beam of light
 (4) The virtual image formed in a plane mirror can be photographed

42. A rectangular tank of depth 8 meter is full of water ($\mu = 4/3$), the bottom is seen at the depth

(1) 6m (2) 8/3m (3) 8cm (4) 10cm

43. A fish is a little away below the surface of a lake. If the critical angle is 49° , then the fish could see things above the water surface within an angular range of θ° where

- (1) $\theta = 49^\circ$ (2) $\theta = 90^\circ$
 (3) $\theta = 98^\circ$ (4) $\theta = 24\frac{1}{2}^\circ$

44. A point object O is placed in front of a glass rod having spherical end of radius of curvature 30 cm. The image would be formed at

- (1) 30 cm left
 (2) Infinity
 (3) 1 cm to the right
 (4) 18 cm to the left

45. The focal length of the field lens (which is an achromatic combination of two lenses) of telescope is 90 cm. The dispersive powers of the two lenses in the combination are 0.024 and 0.036. The focal lengths of two lenses are

- (1) 30 cm and 60 cm
 (2) 30 cm and -45 cm
 (3) 45 cm and 90 cm
 (4) 15 cm and 45 cm

SPACE FOR ROUGH WORK

46. Hybridization of nitrogen atom in

- (1) sp^3 (2) sp^2 (3) sp (4) sp^3d

47. Select the correct IUPAC name of the following compound:

- (1) 3-ethyl-1, 5-dimethylcyclopentane
(2) 1-ethyl-3, 4-dimethylcyclopentane
(3) 4-ethyl-1, 2-dimethylcyclopentane
(4) 2-ethyl-4, 5-dimethylcyclopentane

48. The molecular formula of diphenylmethane,

How many structural isomers are possible when one of the hydrogen is replaced by a chlorine atom?

- (1) 4 (2) 6
(3) 7 (4) 8

49. The number of electrons, present in the valence shell of carbon of CH_3CH_2 ion bearing +ve charge, is:

- (1) 8 (2) 7
(3) 6 (4) 4

50. Dehydration of alcohol involves:

- (1) free radical
(2) carbocation
(3) carbanion
(4) carbene

51. The shape of $[CH_3]^+$ is:

- (1) triangular planar (2) square planar
(3) tetrahedral (4) none of these

52. Most stable carbocation is:

53. The order of stability of the following carbocations is

- (1) III > I > II (2) III > II > I
(3) II > III > I (4) I > II > III

54. The stability of the following carbocation decreases in the order:

- (1) IV > II > I > III (2) III > II > IV > I
(3) II > III > IV > I (4) II > III > I > IV

55. Which is the weakest base of the following whose pK_b values are?

- (1) 4.75 (2) 3.23 (3) 3.12 (4) 3.07

56. Hyperconjugation phenomenon is possible in:

- (1) $H_2C=CH_2$
(2) $CH_3CH_2-CH=CH_2$
(3) $C_6H_5CH=CH_2$
(4) $(CH_3)_3C-CH=CH_2$

57. Which of the following has the most acidic hydrogen?

- (1) 3-Hexanone
(2) 2,4-Hexanedione
(3) 2,5-Hexanedione
(4) 2,3-Hexanedione

SPACE FOR ROUGH WORK

- (1) resonating structures
- (2) tautomers
- (3) geometrical isomers
- (4) optical isomers

59. Which one is ambident nucleophile?

- (1) SO_3^{2-} (2) CN^- (3) NH_3 (4) H_2O

60. Hyperconjugation involves overlap of the following orbitals:

- (1) $\sigma-\sigma$ (2) $\sigma-p$ (3) $p-p$ (4) $\pi-\pi$

61. The correct stability order for the following species is:

- (1) $\text{II} > \text{IV} > \text{I} > \text{III}$
- (2) $\text{I} > \text{II} > \text{III} > \text{IV}$
- (3) $\text{II} > \text{I} > \text{IV} > \text{III}$
- (4) $\text{I} > \text{III} > \text{II} > \text{IV}$

62. In which of the following molecules, all atoms are coplanar?

63. Which among the given molecules can exhibit tautomerism?

- (1) III only (2) Both I and II
- (3) Both I and III (4) Both II and III

Which of the given compounds can exhibit tautomerism?

- (1) II and III (2) I, II and III
- (3) I and II (4) I and III

65. The order of stability of the following tautomeric compound is:

- (1) $\text{I} > \text{II} > \text{III}$ (2) $\text{III} > \text{II} > \text{I}$
- (3) $\text{II} > \text{I} > \text{III}$ (4) $\text{II} > \text{III} > \text{I}$

66. CH_3^- is less stable than:-

- (1) $\text{CH}_3-\text{CH}_2^-$ (2) $\text{CH}_3-\text{CH}^--\text{CH}_3$
- (3) $\text{CH}_2^--\text{NO}_2$ (4) $\text{CH}_3-\text{CH}^--\text{C}_2\text{H}_5$

67. Decreasing order of $-\text{I}$ effect of the triad $[-\text{NO}_2, -\text{NH}_3^+, -\text{CN}]$ is:-

- (1) $-\text{NH}_3^+ > -\text{NO}_2 > -\text{CN}$
- (2) $-\text{NH}_3^+ > -\text{CN} > -\text{NO}_2$
- (3) $-\text{CN} > -\text{NO}_2 > -\text{NH}_3^+$
- (4) $-\text{NO}_2 > -\text{CN} > -\text{NH}_3^+$

SPACE FOR ROUGH WORK

68. Most stable carbanion is:

- (1) $\text{HC}\equiv\text{C}^-$ (2) $\text{H}_2\text{C}=\text{CH}^-$
 (3) $\text{CH}_3-\text{C}(\text{CH}_3)_2-\text{CH}_2^-$ (4) $\text{CH}_3-\text{C}(\text{CH}_3)=\text{CH}^-$

69. Which of the following show + I-effect :-

- (1) $-\text{OH}$ (2) $-\text{OCH}_3$ (3) $-\text{CH}_3$ (4) $-\text{Cl}$

70. Which of the following acids is stronger than acetic acid:

- (1) Propanoic acid
 (2) HCOOH
 (3) Butyric acid
 (4) $(\text{CH}_3)_2\text{CHCOOH}$

71. The stabilization due to resonance is maximum in

- (1)  (2) 
 (3)  (4) 

72. Arrange in decreasing order of basic strength:

- (I)  (II) 
 (III)  (IV) 

- (1) $\text{I} > \text{II} > \text{III} > \text{IV}$
 (2) $\text{II} > \text{III} > \text{I} > \text{IV}$
 (3) $\text{IV} > \text{I} > \text{III} > \text{II}$
 (4) $\text{IV} > \text{I} > \text{II} > \text{III}$

73. Which of the following is most stable carbocation:

- (1)  (2) 
 (3)  (4) $\text{CH}_2=\text{CH}-\text{CH}_2^+$

74. Which is aromatic compound among the following

- (1)  (2) 
 (3)  (4) All of the above

75. Which of the following is most stable alkene:

- (1) $\text{H}_2\text{C}=\text{CH}_2$
 (2) $(\text{CH}_3)_2\text{C}=\text{CH}_2$
 (3) $(\text{H}_5\text{C}_2)_2\text{C}=\text{CH}_2$
 (4) $(\text{CH}_3)_3\text{C}-\text{CH}=\text{CH}_2$

76. Tautomerism is not observed in:-

- (1) $\text{CH}_3-\text{C}(=\text{O})-\text{CH}_3$
 (2) $\text{Ph}-\text{CH}=\text{CH}-\text{OH}$
 (3) CH_3-NO_2
 (4) $\text{CH}_3-\text{C}(\text{CH}_3)_2-\text{CHO}$

SPACE FOR ROUGH WORK

77. Which one of the following compounds has the most acidic nature?

78. Which of the following species is not electrophilic in nature:

79. The correct order of pK_a is

80. Calculate total number of optical isomers in following compound:

81. Which of the following is optically active:

82. Which of the following is not optically active-

83. Which of the following has 'S' configuration:-

84. Which of the following show Geometrical isomerism-

SPACE FOR ROUGH WORK

85. Calculate total number of geometrical isomers in the following compound
 $\text{CH}_3\text{--CH=CH--CH=CH--CH=CH--C}_6\text{H}_5$

- (1) 2
(2) 4
(3) 6
(4) 8

86. $\begin{array}{c} \text{H}_3\text{C} \quad \text{H} \\ \diagdown \quad \diagup \\ \text{C}=\text{C} \\ \diagup \quad \diagdown \\ \text{H}_3\text{C} \quad \text{H} \end{array} \quad \begin{array}{c} \text{H} \\ \diagdown \\ \text{C} \\ \diagup \\ \text{COOH} \end{array}$ Exhibits :

- (1) Tautomerism
(2) Optical isomerism
(3) Geometrical isomerism
(4) Geometrical and optical isomerism

87. Identify R configuration:

88. Which one of the following is a meso-compound.

89. Which of the following biphenyls is optically active?

90. Which is a pair of geometrical isomers:

SPACE FOR ROUGH WORK

91. Genes A and b are present 20cM far from each other on same chromosome. Then a dihybrid plant will produce :

- (1) 4 types of gametes in equal proportion
- (2) More aB gametes as compared to AB gametes
- (3) More aB gametes as compared to Ab gametes
- (4) Ab gametes and ab gametes in equal proportion

92. Which statement is **true** for sex determination in honey-bee :-

- (1) Sex is determined by sex index ratio
- (2) Female is formed by means of parthenogenesis
- (3) Females are diploid having 32 chromosomes
- (4) Male (drone) produce sperm by meiosis

93. The cross over frequency between the genes A & B, A & C and B & C is 6 %, 15 % and 21 % respectively. What is the possible sequence of genes on chromosome ?

- (1) A-B-C
- (2) B-A-C
- (3) A-C-B
- (4) Either B-A-C or C-A-B

94. How many types of gametes will be produced by a trihybrid individual (AaBbCc) where last two genes are completely linked ?

- (1) Eight
- (2) Four
- (3) Six
- (4) Two

95. Given below is the karyotype of *Drosophila*.

The sex of such *Drosophila* should be –

- (1) Superfemale
- (2) Intersex
- (3) Sterile male
- (4) Supermale

96. Find out phenotypic categories in following cross-

A – AaBbCC × aaBBCc

B – GgRrTt × ggrrTT

C – aabbCC × AABbCc

	A	B	C
(1)	2	4	1
(2)	2	2	2
(3)	2	3	1
(4)	3	2	2

Identify cross A and B in Morgan experiment:-

	Cross-A	Cross-B
(1)	Tightly linked genes	Loosely linked genes
(2)	Linkage	Independent assortment
(3)	Independent assortment	Linkage
(4)	More recombination	Less recombination

- 98.** Two genes a and b are linked and show 30% recombination. If ++ / ++ individual married with ab / ab then the types and proportion of gametes in F_1 will be -
 (1) ++ 35% : ab : 35% : + a 15% : +b 15%
 (2) ++ 15% : ab : 15% : + a 35% : +b 35%
 (3) ++ 35% : ab : 15% : + a 35% : +b 15%
 (4) ++ 15% : ab : 35% : + a 15% : +b 35%
- 99.** Choose wrong statement for chromosomal theory of inheritance.
 (1) Genes and chromosomes both occur in pair
 (2) Proposed by Sutton and Boveri
 (3) Behaviour of chromosome movement was studied in mitosis
 (4) Independent pair of genes and chromosomes segregate independently of each other
- 100.** A holandric gene causes Hypertrichosis. When a man with hairy pinna marries a color blind women, what percentage of their son would be expected to have color blindness?
 (1) 50% (2) 25%
 (3) 75% (4) 100%
- 101.** In Grasshoppers, females are
 (1) ZZ (2) XX
 (3) ZO (4) XO
- 102.** Heterogametic male is found in all except
 (1) Mammals
 (2) *Drosophila*
 (3) Birds
 (4) Grasshopper
- 103.** *Dioscorea* and *Vallisneria* show which type of sex determination?
 (1) XX-XY type (2) XX-XO type
 (3) ZZ-ZW type (4) ZZ-ZO type
- 104.** Number of Barr bodies in XXX female would be:
 (1) 4 (2) 2
 (3) 3 (4) 1
- 105.** Foetal sex can be determined from cells present in amniotic fluid by looking for:
 (1) Auto somes
 (2) Marker chromosome
 (3) Barr bodies
 (4) Chiasmata
- 106.** Chromosome number of female and male honey bee is:
 (1) 32, 16 (2) 16, 8
 (3) 20, 24 (4) 32, 32
- 107.** In a cross performed by Morgan in *Drosophila*, the number of offsprings obtained were as follows :
 $W^+ m^+ = 75,$ $Wm = 75$
 $+m = 25,$ $w + = 25$
 Find out the distance between gene W and m.
 (1) 37.2 (2) 18.6 (3) 62.8 (4) 25
- 108.** In honey bee, male do not have and cannot have, but have a and
 (1) Father, sons, grandfather, grandsons
 (2) Grandfather, grandsons, father, sons
 (3) Sons, grandsons, father, grandfather
 (4) Grandsons, sons, father, grandfather
- 109.** Method of sex determination in *Drosophila* and birds are:
 (1) XX-XO and XX-XY respectively
 (2) XX - XY and ZZ - ZW respectively
 (3) XX - XY and ZZ - ZO respectively
 (4) XX-XO and ZZ-ZO respectively
- 110.** In Pedigree analysis the symbol  represents :
 (1) Consanguineous marriage
 (2) Sex unspecified
 (3) Monozygotic twins
 (4) Dizygotic twins

111. Identify the type of inheritance in the given pedigree.

- (1) X-linked Dominant
(2) X-linked recessive
(3) X-Y linked

112. In the following human pedigree, the filled symbols represent the affected individuals. Identify the type of given pedigree.

- (1) Recessive Y - linked
(2) Recessive X-linked
(3) Dominant Y - linked
(4) Dominant X - linked

113. Which of the following most appropriately describes haemophilia?

- (1) Autosomal recessive gene disorder
(2) X-linked recessive gene disorder
(3) Autosomal disorder
(4) X-linked dominant gene disorder

114. In a random mating population of 200 individual 128 have AA, 64 have Aa, 8 have 'aa' genotype. Find out frequency of dominant and recessive allele respectively.

- (1) 0.8, 0.2 (2) 0.9, 0.1
(3) 0.10, 0.02 (4) 0.2, 0.8

115. In a large population frequency of recessive allele is 60%. Find out frequency of homozygous individual

- (1) 0.10 (2) 0.6
(3) 0.52 (4) 0.9

116. In a random mating population of 5000 individual, frequency of dominant organism are 0.51. Find out number of homozygous individual :-

- (1) 2100 (2) 2900
(3) 3100 (4) 2982

117. Identify the correctly matched pair.

- (1) $\phi \times 174$ – 5836 Nucleotide
(2) Bacteriophage – 48502 BP
(3) *E. Coli*- 4.6×10^{12} BP
(4) Human genome – 3.3×10^6 BP

118. In the bacteriophage $\phi \times 174$ number of nucleotide presents are 5386. Calculate the number of phospho-diester bond and pentose sugar in it.

- (1) 5385, 5386 (2) 5386, 5386
(3) 5386, 5385 (4) 5385, 5385

119. Consider the following statements and choose the correct option stating true (T) or False (F).

- (A) Compaction occur by folding and attachment of DNA with polyamines in prokaryotes
(B) The compact structure of DNA is called nucleosome in prokaryotes.
(C) Histone proteins are rich in basic amino acid.
(D) 'Nu body' consist of two copies of each H_2A , H_2B , H_3 and H_4 histone protein.
(E) Length of DNA for a human diploid cell is 2.2 metre.

A	B	C	D	E
(1) T	F	T	T	T
(2) F	F	T	F	T
(3) F	T	T	T	F
(4) T	T	T	T	T

120. Which is related to Barr body :-

- (1) Y-body
(2) Lyon hypothesis
(3) Schwann hypothesis
(4) Genic-balance theory

121. DNA was first isolated from nucleus of pus cell by A and it was named as B.

A

B

- | | |
|--------------|--------------|
| (1) Meischer | Nuclein |
| (2) Franklin | Nucleic acid |
| (3) Watson | Nuclein |
| (4) Wilikin | Nucleoid |

122. A phosphate group is linked to 5' OH of a nucleotide through

- (1) Phosphodiester linkage
- (2) Phosphoester linkage
- (3) N-glycosidic linkage
- (4) H-Bond

123. Lightly stained fibrous part of chromatin

- (1) Is devoid of active genes
- (2) Is densly packed
- (3) Is transcriptionally active
- (4) Is called heterochromatin

124. Diameter of DNA double helix is :-

- | | |
|-----------|-----------|
| (1) 34 Å | (2) 20 Å |
| (3) 3.4 Å | (4) 340 Å |

125. In a DNA molecule guanine is 16%. Percent of thymine would be :-

- | | |
|---------|---------|
| (1) 18% | (2) 34% |
| (3) 32% | (4) 68% |

126. Then negative charge of phosphate group in prokaryotic DNA is counter balanced by:-

- (1) Nitrogenous bases
- (2) Positively charged side chain of lysine and arganine aminoacid of histone protein
- (3) Positively charged non-histone protein i.e. polyamines
- (4) Pentose sugar

127. Prokaryotic DNA :-

- (1) Is linear with high GC content
- (2) Show association with histone protein
- (3) Does not show circular DNA with low GC content
- (4) ds-circular, GC rich

128. Backbone of a polynucleotide chain is formed due to :-

- (1) Phosphate
- (2) Sugar
- (3) Sugar and phosphate
- (4) Sugar and nitrogen base

129. 6-Aminopurine in the strucutre of DNA is:-

- | | |
|--------------|-------------|
| (1) Cytosine | (2) Guanine |
| (3) Thymine | (4) Adenine |

130. What is the percentage of guanine in a strand of DNA having 100 nucleotides and 20% thymine ?

- | | |
|---------|---------|
| (1) 30% | (2) 60% |
| (3) 20% | (4) 10% |

131. In addition to H-bonds, stability of the helical structure of DNA is due to :-

- (1) Antiparallel polarity of the two polynucleotide chain
- (2) Uniform distance between two strand of the helix
- (3) Plane of one base pair stacks over other in double helix
- (4) Right handed coiling of two polypeptide chain

132. A. A nitrogen base is linked to pentose sugar through N-glycosidic linkage to form a nucleotide

B. Uracil is present in DNA.

- (1) Only (A) is correct
- (2) Only (B) is correct
- (3) Both (A) and (B) are incorrect
- (4) Both (A) and (B) are correct

133. Chargaff rule is not applicable for :-

- | | |
|------------|----------------------|
| (1) SS-DNA | (2) DS-DNA |
| (3) SS-RNA | (4) Both (1) and (3) |

134. Sugars are attached to pyrimidines by the formation of :-

- (1) 1' – 9' glycosidic linkage
- (2) 1' – 6' glycosidic linkage
- (3) 1' – 1' glycosidic linkage
- (4) 1' – 2' glycosidic linkage

135. How many phospho-diester bonds are present in a plasmid DNA having 2000bp?

- (1) 1000
- (2) 1998
- (3) 4000
- (4) 3998

- 136.** What is the correct sequence of reproductive events in humans .
- (1) Gametogenesis-Fertilisation-Insemination-Implantation-Parturition
 - (2) Gametogenesis-Insemination-Fertilisation-Implantation-Parturition
 - (3) Gametogenesis-Insemination-Implantation-Fertilisation-Parturition
 - (4) Insemination-Gametogenesis-Fertilisation-Implantation-Parturition
- 137.** The testes in humans are situated outside the abdominal cavity inside a pouch called scrotum. What is the purpose of it?
- (1) Providing a secondary sexual feature of exhibiting the male sex
 - (2) Maintaining the scrotal temperature lower than the internal body temperature
 - (3) Escaping any possible compression by the visceral organs
 - (4) Providing more space for the growth of epididymis
- 138.** The fold of skin covering the penis is called:
- (1) Corpora cavernosa
 - (2) Corpus spongiosum
 - (3) Foreskin or prepuce
 - (4) None of these
- 139.** Sertoli cell is found in :
- (1) Seminiferous tubules
 - (2) Uriniferous tubules
 - (3) Outside the seminiferous tubules
 - (4) All of these
- 140.** Testosterone is secreted by :
- (1) Intestinal cells
 - (2) Leydig's cells
 - (3) Seminiferous tubules
 - (4) Vas deferens
- 141.** The correct order of the male sex accessory ducts of a human being is :
- (1) Rete testis, epididymis, vasa efferentia, vas deferens
 - (2) Rete testis, vasa efferentia, vas deferens, epididymis
 - (3) Vasa efferentia, epididymis, rete testis, vas deferens
 - (4) Rete testis, vasa efferentia, epididymis, vas deferens
- 142.** Which of the following is an accessory reproductive gland in male human
- (1) A prostate gland
 - (2) Paired seminal vesicles
 - (3) Paired bulbourethral glands
 - (4) All of these
- 143.** The acrosome plays Important role in :
- (1) Motility of sperm
 - (2) Penetration of ovum by sperm
 - (3) The fusion of pronuclei of the gametes
 - (4) None of these
- 144.** Choose the wrong answer :
- (1) Sertoli cells provide nutrient to the sperm
 - (2) Scrotum acts as a thermoregulator
 - (3) Interstitial cell stimulating hormones stimulate the Leydig cells to synthesise and secrete testicular hormones
 - (4) Seminal vesicle is known as bulbourethral gland
- 145.** Temperature in scrotum necessary for sperm formation should be :
- (1) 2°C above body temperature
 - (2) 2°C-2.5°C below body temperature
 - (3) 4°C above body temperature
 - (4) 4°C below body temperature

146. Choose the correct answer :

- (1) Leydig cells synthesise and secrete testicular hormones called as androgens
- (2) Leydig cells provide nutrition to the sperms
- (3) Prostate gland is known as bulbo-urethral gland
- (4) Leydig cells and Sertoli cells are same in function

147. Which is muscular layer of uterus ?

- (1) Perimetrium
- (2) Myometrium
- (3) Endometrium
- (4) None of these

148. Which of the following constitute the female accessory ducts ?

- (1) The oviducts (fallopian tubes)
- (2) Uterus
- (3) Vagina
- (4) All of these

149. The opening of the vagina is often covered partially by a membrane called :

- (1) The labia majora
- (2) Mons pubis
- (3) Hymen and Clitoris
- (4) Hymen

150. The clitoris is a tiny finger-like structure which lies at the :

- (1) Upper junction of the two labia minora below the urethral opening
- (2) Lower junction of the two labia minora above the urethral opening
- (3) Lower junction of the two labia minora below the urethral opening
- (4) Upper junction of the two labia minora above the urethral opening

151. Stroma is a term applied to :

- (1) Gall stone
- (2) Ovarian follicles
- (3) Connective tissue in which Graafian follicles are embedded
- (4) Connective tissue surrounding the seminiferous tubules

152. Which structure related with secretion of milk in mammary glands ?

- (1) Mammary tubules
- (2) Alveoli
- (3) Mammary duct
- (4) Mammary ampulla

153. What is the correct sequence of sperm formation ?

- (1) Spermatids, spermatocyte, spermatogonia, spermatozoa
- (2) Spermatogonia, spermatocyte, spermatozoa, spermatids
- (3) Spermatogonia, spermatozoa, spermatocyte, spermatids
- (4) Spermatogonia, spermatocyte, spermatids, spermatozoa

154. The diploid stages in gametogenesis are:

- (1) Primary spermatocyte and secondary spermatocyte
- (2) Spermatogonia and spermatids
- (3) Secondary spermatocyte and spermatids
- (4) Primary spermatocyte and spermatogonia

155. 50 secondary oocytes in female and 50 secondary spermatocytes in male give rise to :

- (1) 100 ova and 50 sperms
- (2) 50 ova and 50 sperms
- (3) 100 ova and 200 sperms
- (4) 50 ova and 100 sperms

- 156.** Spermiogenesis is the process in which :
- (1) spermatids are transformed into spermatozoa (sperms)
 - (2) Spermatogonia produce spermatids
 - (3) Spermatocytes give rise to spermatozoa
 - (4) Sperm released from the seminiferous tubules
- 157.** Select the option which has all haploid cells :
- (1) Primary oocyte, sperm, spermatids
 - (2) Ovum, secondary oocyte, secondary spermatocyte
 - (3) Oogonia, ootid, primary spermatocyte
 - (4) Spermatozoa, ovum, primary oocyte
- 158.** (A) 100 primary oocytes are required to produce 100 ovum.
 (B) Ootid transforms to ovum in oviduct.
- (1) Only (A) is correct
 - (2) Only (B) is correct
 - (3) Both are correct
 - (4) Both are wrong
- 159.** Which of the following statements is true ?
- (1) Sperms are not motile until they pass through the epididymis.
 - (2) Sperms require capacitation in the female reproductive tract before they can fertilize an ovum.
 - (3) A secondary oocyte does not complete meiotic division until it has been fertilized.
 - (4) All of the above are true.
- 160.** After a sperm has penetrated an ovum in the process of fertilization, entry of further sperms is prevented by :
- (1) Development of the vitelline membrane
 - (2) Development of the pigment coat
 - (3) Condensation of yolk
 - (4) Formation of fertilization membrane
- 161.** The acrosome plays important role in :
- (1) Motility of sperm
 - (2) Penetrations of ovum by sperm
 - (3) Providing energy to sperm
 - (4) None of these
- 162.** Identify the odd one from the following:
- (1) Labia minora
 - (2) Fimbriae
 - (3) Infundibulum
 - (4) Isthmus
- 163.** At the time of fertilization :
- (1) First maturation division is completed
 - (2) First polar body is formed
 - (3) Second maturation division is completed
 - (4) None of these
- 164.** Fertilization is fusion of:
- (1) Diploid spermatozoa with diploid ovum to form diploid zygote
 - (2) Haploid spermatozoa with diploid ovum to form diploid zygote
 - (3) Diploid spermatozoa with haploid ovum to form diploid zygote
 - (4) Haploid spermatozoa with haploid ovum to form diploid zygote
- 165.** Mobility of mature sperm is controlled by mitochondria present in
- (1) Head
 - (2) Middle piece
 - (3) Tail
 - (4) All of these
- 166.** Maturation of sperm before penetration of ovum is called-
- (1) Capacitation
 - (2) Activation
 - (3) Stimulation
 - (4) None of these

167. Which distinguishes a morula from a blastula ?

- (1) Presence of less yolk
- (2) Absence of yolk
- (3) Presence of a cavity
- (4) Absence of cavity

168. In which stage is blastocoel formed :

- (1) Morula
- (2) Blastula
- (3) Gastrula
- (4) None of these

169. The primary egg membrane of mammalian egg is termed :

- (1) Chorion
- (2) corona radiata
- (3) Zona pellucida
- (4) Vitelline membrane

170. Essential for ovulation in reflex ovulators:

- (1) Copulation
- (2) Sufficient Oxygen
- (3) Sufficient food
- (4) Both (1) and (2)

171. A cell formed from cleavage is called a :

- (1) Blastomere
- (2) Morula
- (3) Blastula
- (4) All of these

172. Correct sequence in development is :

- (1) Fertilization → Zygote → Cleavage → Morula → Blastula → Gastrula
- (2) Fertilization → Zygote → Blastula → Morula → Cleavage → Gastrula
- (3) Fertilization → Cleavage → Morula → Zygote → Blastula → Gastrula
- (4) Cleavage → Zygote → Fertilization → Morula → Blastula → Gastrula

173. Which statement is incorrect for oogenesis.

- (i) The primary follicles get surrounded by more layers of granulosa cells and a new theca cells layers are called secondary follicles.
 - (ii) The secondary follicle is characterised by a fluid filled cavity called antrum and theca layer is organised into an inner theca interna and an outer theca externa.
 - (iii) Primary oocyte within the secondary follicle grows in size and completes its first meiotic division
 - (iv) The secondary oocyte form a new membrane called zona pellucida surrounding it.
 - (v) The Graafian follicle ruptures to release the secondary oocyte (ovum) from the ovary by the process called ovulation.
 - (vi) The second meiotic division completed before ovulation and results in the formation of a second polar body and a haploid ovum (ootid).
- (1) (i), (ii), (iv) and (vi)
 - (2) (ii) and (iii) only
 - (3) (ii), (iii) and (vi) only
 - (4) (ii), (iii), (iv) and (vi)

- 174.** Choose correct option from given statements
- (A) The embryo with 8 to 16 blastomeres is called a blastocyst.
- (B) The blastocyst continues to divide and transforms into morula as it moves further into the uterus.
- (C) The blastomeres in the blastocyst are arranged into an outer layer called inner cell mass and an inner group of cells attached to trophoblast called the trophoblast.
- (D) In implantation morula becomes embedded in the endometrium of the uterus.
- (E) Inner cell mass contains certain cells called stem cells which have the potency to give rise to all the tissues and organs.
- (F) From inner cell mass embryo will be developed.
- (1) More than three statements are correct
- (2) More than three statements are incorrect
- (3) Only two statements are incorrect
- (4) Only three statement is correct
- 175.** Mammalian eggs have :-
- (1) No yolk at all
- (2) Small amount, of yolk
- (3) large amount of yolk
- (4) Modrate amount of yolk
- 176.** Fertilization can be correctly defined as fusion of :-
- (1) Male and female pronuclei
- (2) Cytoplasm of male and female gametes
- (3) Two gametes
- (4) Male and female gametes of the same species

- 177.** During cleavage, what is true about embryo?
- (1) Nucleo-cytoplasmic ratio remains unchanged
- (2) Size does not increase
- (3) There is less consumption of oxygen
- (4) The division is like meiosis
- 178.** Extrusion of second polar body from egg nucleus occurs :
- (1) After entry of sperm before completion of fertilization
- (2) Before completion of fertilization
- (3) Before entry of sperm
- (4) Without any relation of sperm entry
- 179.** What is true about cleavage in fertilized egg of humans ?
- (1) Meroblastic
- (2) Start when egg reaches uterus
- (3) Starts in fallopian tubes
- (4) It is identical to normal mitosis
- 180.** Immediately after ovulation, the mammalian egg is covered by a membrane called
- (1) Chorion
- (2) Zona pellucida
- (3) Corona radiata
- (4) (2) and (3)
