

CLASSROOM CONTACT PROGRAMME

(ACADEMIC SESSION 2019-2020)

PRE-MEDICAL : ENTHUSIAST COURSE [PHASE-I]

TEST # 11

DATE : 14-12-2019

REVISION TEST

Test Pattern : NEET

INSTRUCTIONS

Do not open this Test Booklet until you are asked to do so

1. Immediately fill in the form number on this page of the Test Booklet with Blue/Black Ball Point Pen. Use of pencil is strictly prohibited.
2. The candidates should not write their Form Number anywhere else (except in the specified space) on the Test Booklet/Answer Sheet.
3. The test is of 3 hours duration.
4. The Test Booklet consists of 180 questions. The maximum marks are 720.
5. There are three parts in the question paper A,B,C consisting of Physics, Chemistry and Biology having 45 questions each in Physics & Chemistry and 90 questions in Biology part of equal weightage. Each question is allotted 4 (four) marks for correct response.
6. One Fourth mark will be deducted for indicated incorrect response of each question. No deduction from the total score will be made if no response is indicated for an item in the Answer Sheet.
7. Use Blue/Black Ball Point Pen only for writing particulars/markings responses on Side-1 the Answer Sheet. Use of pencil is strictly prohibited.
8. No candidate is allowed to carry any textual material, printed or written, bits of papers, pager, mobile phone any electronic device etc, except the Identity Card inside the examination hall/room.
9. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
10. On completion of the test, the candidate must hand over the Answer Sheet to the invigilator on duty in the Room/Hall. However, the candidate are allowed to take away this Test Booklet with them.
11. Do not fold or make any stray marks on the Answer Sheet.

REVISION TEST # 11**Topics****DATE : 14 - 12 - 2019****PRE-MEDICAL ENTHUSIAST COURSE : PHASE - I - PATTERN : [NEET]****PHYSICS** : Calorimetry, Thermal Expansion**CHEMISTRY** : Chemical Kinetics, Solid State**ZOOLOGY** : Circulatory System, Drug & Alcohol Abuse, Adolescence, Domestication of Animals

SPACE FOR ROUGH WORK

HAVE CONTROL → HAVE PATIENCE → HAVE CONFIDENCE ⇒ 100% SUCCESS

BEWARE OF NEGATIVE MARKING

1. Two bars A and B of circular cross-section and of same volume and made of the same material are subjected to tension. If the diameter of A is half that of B and if the force applied to both the bars is same and it is within elastic limits, the ratio of extension of A to that of B is
 (1) 2 (2) 4 (3) 8 (4) 16
2. An iron rod of $Y = 10^{11} \text{ N/m}^2$ and coefficient of linear expansion $10^{-5}/^\circ\text{C}$ has a length of one metre and area of cross-section 10 cm^2 . If its temperature is raised by 100°C and it is held so that it is not allowed to expand or bend, the force produced is
 (1) 10^3 N (2) 10^4 N
 (3) 10^5 N (4) 10^6 N
3. A thick cylindrical metallic rod of density ρ , Young's modulus Y and length L is suspended from a rigid support. The increase in length of the rod due to its own weight is
 (1) $\frac{\rho g L}{Y}$ (2) $\frac{\rho g L^2}{Y}$
 (3) $\frac{\rho g L^2}{2Y}$ (4) $\frac{\rho g L^2}{4Y}$
4. A 20 Newton block is suspended from a wire such that its length changes by 1 %. If Young's modulus of material of the wire is $2 \times 10^{11} \text{ Nm}^{-2}$, the area of cross-section of the wire is
 (1) 1 mm^2 (2) 10^{-1} mm^2
 (3) 10^{-2} mm^2 (4) 10^{-3} mm^2
5. A metallic rod breaks when the strain produced is 0.2 %. Young's modulus of the material of the rod is $7 \times 10^9 \text{ N/m}$. The area of cross-section to support a load of 10^4 N is
 (1) $7.1 \times 10^{-2} \text{ m}^2$
 (2) $7.1 \times 10^{-4} \text{ m}^2$
 (3) $7.1 \times 10^{-6} \text{ m}^2$
 (4) $7.1 \times 10^{-8} \text{ m}^2$
6. Bulk modulus of rubber is $9 \times 10^8 \text{ N/m}^2$. The depth below the surface of sea where a solid rubber ball should be taken to reduce its volume by 0.1 % is
 (Given that atmospheric pressure at sea level is equal to 10 m of column of water)
 (1) 10^3 m (2) 10^2 m
 (3) 10 m (4) 1 m
7. A solid sphere of radius R made of a material of bulk modulus K is surrounded by a liquid in a cylindrical container. A massless piston of area A floats on the surface of the liquid when a mass M is placed on the piston to compress the liquid. The fractional change in the radius of the sphere is
 (1) $\frac{mg}{4KA}$ (2) $\frac{mg}{3KA}$
 (3) $\frac{3KA}{mg}$ (4) $\frac{4KA}{mg}$

SPACE FOR ROUGH WORK

8. Young's modulus of steel and brass are $2 \times 10^{10} \text{ N/m}^2$ and 10^{10} N/m^2 respectively. A steel and brass wire of the same length are extended by 1 mm under the same force, the radii of steel and brass wires are R_s and R_b respectively. Then

(1) $R_s = \sqrt{2} R_b$ (2) $R_s = \frac{R_b}{\sqrt{2}}$

(3) $R_s = 4R_b$ (4) $R_s = \frac{R_b}{4}$

9. If a 5 kg body falls to the ground from a height of 30 m and if all its mechanical energy is converted into heat, the heat produced will be :-

- (1) 350 cal (2) 150 cal
(3) 60 cal (4) 6 cal

10. A block of mass 1 kg slides on a rough horizontal surface. If the speed of the block decreases from 10 m/s to 8 m/s, the thermal energy developed in this process :-

- (1) 50 J (2) 18 J
(3) 36 J (4) 25 J

11. 1 g of ice at 0°C is converted into steam at 100°C . The amount of heat required to do so is?

- (1) 80 cal (2) 180 cal
(3) 640 cal (4) 720 cal

12. Liquids A and B are at 30°C and 20°C . When mixed in equal masses, the temperature of the mixture is found to be 26°C . Their specific heat are in the ratio of :-

- (1) 3:2 (2) 1:1 (3) 2:3 (4) 4:3

13. A solid material is supplied with heat at a constant rate. The temperature of material is changing with heat input as shown in the figure. What does slope DE represents ?

- (1) Latent heat of liquid
(2) Latent heat of vapour
(3) Heat capacity of vapour
(4) Inverse of heat capacity of vapour

14. One kg ice at 0°C is mixed with 1 kg of water at 10°C the resulting temperature will be :-

- (1) Between 0°C and 10°C
(2) Greater than 10°C
(3) Lesser than 0°C
(4) Equal to 0°C

15. 10 gm of ice at -5°C is added to 10 gm of water at 60°C . Specific heat of water = $1 \text{ cal/gm}^\circ\text{C}$, specific heat of ice = $0.5 \text{ cal/gm}^\circ\text{C}$ and latent heat of ice = 80 cal/gm . The resulting temperature of the mixture is :-

- (1) 0°C (2) 2°C (3) -2°C (4) 10°C

16. Consider a slab consisting of two different materials having equal thickness and thermal conductivities K and $2K$, respectively. The equivalent thermal conductivity of the slab in parallel combination :-

- (1) $\frac{2}{3}K$ (2) $\sqrt{2}K$ (3) $\frac{3K}{2}$ (4) $\frac{4}{3}K$

SPACE FOR ROUGH WORK

17. A new scale of temperature (which is linear) called the W scale, the freezing and boiling points of water are 39°W and 139°W respectively. What will be the temperature on the new scale, corresponding to a temperature of 39°C on the Celsius scale ?

(1) 200°W
(2) 139°W
(3) 78°W
(4) 117°W

18. A cylindrical metallic rod in thermal contact with two reservoirs of heat at its two ends conducts an amount of heat Q in time t . The metallic rod is melted and the material is formed into a rod of one third the radius of the original rod. What is the amount of heat conducted by the new rod, when placed in thermal contact with the two reservoirs in time t ?

(1) $\frac{Q}{2}$ (2) $\frac{Q}{24}$
(3) $\frac{Q}{81}$ (4) $\frac{Q}{3}$

19. When 2 kg of ice at 0°C melts to water at 0°C , the resulting change in its entropy, taking latent heat of ice to be 80 cal/g , is

(1) 273 cal/K
(2) 586 cal/K
(3) 80 cal/K
(4) 293 cal/K

20. Water at 350 K is heated to 400 K at constant pressure of 1 atm . The rate of heating is constant. Which one of the following graphs represents the variation of temperature with time ?

21. A slab of stone of area 0.28 m^2 and thickness 0.1 m is exposed on the lower surface to steam at 100°C . A block of ice at 0°C rests on the upper surface of the slab. In one hour 3.72 kg of ice is melted. The thermal conductivity of slab is :

(Given latent heat of fusion of ice $3.36 \times 10^5\text{ J kg}^{-1}$)

(1) $2.05\text{ J/m/s}^\circ\text{C}$ (2) $1.02\text{ J/m/s}^\circ\text{C}$
(3) $1.24\text{ J/m/s}^\circ\text{C}$ (4) $1.29\text{ J/m/s}^\circ\text{C}$

22. Steam at 100°C is passed into 40 g of water at 10°C . When water acquires a temperature of 80°C , the mass of water present will be :

[Take specific heat of water $= 1\text{ cal g}^{-1}^\circ\text{C}^{-1}$ and latent heat of steam $= 540\text{ cal g}^{-1}$]

(1) 44 g (2) 41.59 g
(3) 45 g (4) 42.59 g

SPACE FOR ROUGH WORK

23. Certain quantity of water cools from 60°C to 50°C in the first 5 minutes and to 44°C in the next 5 minutes. The temperature of the surroundings is:-
 (1) 35°C (2) 20°C
 (3) 42°C (4) 10°C
24. The two ends of a metal rod are maintained at temperatures 200°C and 210°C . The rate of heat flow in the rod is found to be 4.0 J/s . If the ends are maintained at temperatures 300°C and 310°C , the rate of heat flow will be :
 (1) 16.8 J/s (2) 8.0 J/s
 (3) 4.0 J/s (4) 44.0 J/s
25. A piece of ice falls from a height h so that it melts completely. Only half of the heat produced is absorbed by the ice and all energy of ice gets converted into heat during its fall. The value of h is :
 [Latent heat of ice is $3.4 \times 10^5 \text{ J/kg}$ and $g = 10 \text{ N/kg}$]
 (1) 34 km (2) 544 km
 (3) 136 km (4) 68 km
26. Two identical bodies are made of a material for which the heat capacity increases with temperature. One of these is at 80°C , while the other one is at 0°C . If the two bodies are brought into contact, then, assuming no heat loss, the final common temperature is :-
 (1) less than 40°C but greater than 0°C
 (2) 0°C
 (3) 40°C
 (4) more than 40°C
27. 540 calories of heat convert 1 cubic centimeter of water at 100°C into 1671 cubic centimeter of steam at 100°C at a pressure of one atmosphere. Then the work done against the atmospheric pressure is nearly :-
 (1) 540 cal (2) 40 cal
 (3) Zero cal (4) 500 cal
28. One end of a copper rod of length 1.0 m and area of cross-section 10^{-3} m^2 is immersed in boiling water and the other end in ice. If the coefficient of thermal conductivity of copper is $92 \text{ cal/m-s}^{\circ}\text{C}$ and the latent heat of ice is $8 \times 10^4 \text{ cal/kg}$, then the amount of ice which will melt in one minute is:-
 (1) $9.2 \times 10^{-3} \text{ kg}$
 (2) $8 \times 10^{-3} \text{ kg}$
 (3) $6.9 \times 10^{-3} \text{ kg}$
 (4) $5.4 \times 10^{-3} \text{ kg}$
29. A cold box in the shape of a cube of edge 50cm is made of 'thermocool' material 4 cm thick. If the outside temperature is 30°C , the quantity of ice that will melt each hour inside the cold box is (the thermal conductivity of the thermocol material is $0.05 \text{ W/m}^2\text{-K}$)
 (1) 1.52 kg (2) 0.605 kg
 (3) 2.520 kg (4) 0.512 kg

SPACE FOR ROUGH WORK

30. A block of ice at 0°C slowly heated and converted into steam at 100°C . Which of these curves represents the phenomenon qualitatively.

31. Calculate the rate of loss of heat through a glass window of area 1000 cm^2 and thickness 0.4 cm when temperature inside is 37°C and out side is -5°C . Coefficient of thermal conductivity of glass is $2.2 \times 10^{-3}\text{ cal s}^{-1}\text{ cm}^{-1}\text{ K}^{-1}$

- (1) 450 cal s^{-1} (2) 231 cal s^{-1}
(3) 469 cal s^{-1} (4) 650 cal s^{-1}

32. The coefficient of volume expansion of a liquid is $50 \times 10^{-5}\text{ K}^{-1}$. When temperature is raised by 30°C then

- (1) its density increases
(2) its fractional decrease in density is 1.5×10^{-2}
(3) its fractional increase in density is 1.5×10^{-2}
(4) None

33. In centigrade scale $^{\circ}\text{C}$, the temperature of a body increases by 30°C . The increase in temperature on fahrenheit scale ($^{\circ}\text{F}$) is :-

- (1) 50° (2) 34° (3) 30° (4) 54°

34. Two conducting slabs of heat conductivity $4K_1$ and $2K_2$ are joined as shown in figure. The temperature at ends of the slabs are θ_1 and θ_2 ($\theta_1 > \theta_2$) the final temperature (θ_m) of junction is :-

- (1) $\frac{K_1\theta_1 + K_2\theta_2}{K_1 + K_2}$ (2) $\frac{2K_1\theta_2 + K_2\theta_1}{2K_1 + K_2}$
(3) $\frac{2K_1\theta_1 + K_2\theta_2}{2K_1 + K_2}$ (4) None

35. On an X temperature scale, water freezes at -125.0°X and boils at 375.0°X . On another Y temperature scale, water freezes at -70.0°Y and boils at -30.0°Y . The value of temperature on X-scale equal to the temperature of 50.0°Y on Y-scale is

- (1) 455.0°X
(2) -125.0°X
(3) 1375.0°X
(4) 1500.0°X

SPACE FOR ROUGH WORK

36. A rod of length 1000 mm and co-efficient of linear expansion $\alpha = 10^{-4}$ per degree is placed symmetrically between fixed walls separated by 1001 mm. The Young's modulus of the rod is 10^{11} N/m². If the temperature is increased by 20°C, then the stress developed in the rod is (in N/m²) :

- (1) 10
(2) 10^8
(3) 2×10^8
(4) cannot be calculated
37. A lead bullet penetrates in a solid object and melts. Assuming that 50% of its kinetic energy was used to heat it, the initial speed of the bullet (initial temperature of the bullet is 27°C and its melting point is 327°C) Latent heat of fusion of lead = 2.5×10^4 J/kg and specific heat capacity = 125 J/kg-K :-
- (1) 100 m/s (2) 500 m/s
(3) 800 m/s (4) 1000 m/s
38. How many grams of a liquid a specific heat 0.2 at a temperature 40°C must be mixed with 100g of liquid of specific heat of 0.5 at a temperature 20°C, so that the final temperature of the mixture become 32°C :-
- (1) 175g (2) 300g
(3) 295g (4) 375g

39. The ratio of the densities of the two bodies is 3 : 4 and the ratio of specific heats is 4 : 3. The ratio of their thermal capacities for unit volume is :-

- (1) 1 : 1 (2) 1 : 2
(3) 2 : 3 (4) 2 : 7

40. 4 gm of steam at 100°C is added to 20gm of water at 46°C in a container of negligible mass. Assuming no heat is lost to surrounding, the mass of water in container at thermal equilibrium is :-

(latent heat of vapourisation = 540 cal/gm.
Specific heat of water = 1 cal/gm-°C)

- (1) 18 gm
(2) 20 gm
(3) 22 gm
(4) 24 gm

41. Two similar rods are joined as shown in figure. Assume no heat loss through lateral surface of rod and temperatures at the ends are shown in steady state. Then temperature of junction is :-

- (1) 50°C (2) 75°C
(3) 66.6°C (4) 33.3°C

SPACE FOR ROUGH WORK

42. The graph shown gives the temperature along an x axis that extends directly through a wall consisting of three layers A, B and C. The air temperature on one side of the wall is 150°C and on the other side is 80°C . Thermal conduction through the wall is steady. Out of the three layers A, B and C, thermal conductivity is greatest of the layer :-

- (1) A
(2) B
(3) C
(4) Thermal conductivity of A = Thermal conductivity of B.
43. Ice starts forming in lake with water at 0°C and when the atmospheric temperature is -10°C . If the time taken for 1 cm of ice be 7 hours. Find the time taken for the thickness of ice to change from 1 cm to 2 cm :-
- (1) 11 hours
(2) 6 hours
(3) 16 hours
(4) 21 hours

44. A wall has two layers A and B each made of different materials. The thickness of both the layers is the same. The thermal conductivity of A, $K_A = 3K_B$. The temperature difference across the wall is 20°C in thermal equilibrium, then :-

- (1) The temperature difference across A is 15°C
(2) Rate of heat transfer across A is more than across B.
(3) Temperature difference across B is 10°C .
(4) Temperature difference across A is 5°C .

45. Q calori of heat is required to raise the temperature of 1 mole of a monoatomic gas from 20°C to 30°C at constant pressure. The amount of heat required to raise the temperature of 1 mole of diatomic gas from 20°C to 25°C at constant pressure is :

- (1) Q
(2) $\frac{3}{2}Q$
(3) $\frac{5}{6}Q$
(4) $\frac{7}{10}Q$

SPACE FOR ROUGH WORK

46. An alloy of copper, silver and gold is found to have copper constituting the C.C.P. lattice. If silver atoms occupy the edge centres and gold is present at body centre, the alloy has a formula-
- (1) $\text{Cu}_4\text{Ag}_2\text{Au}$ (2) $\text{Cu}_4\text{Ag}_4\text{Au}$
(3) $\text{Cu}_4\text{Ag}_3\text{Au}$ (4) CuAgAu
47. In a face centred cubic arrangement of A & B atoms whose A atoms are at the corner of the unit cell & B atoms at the face centres. One of the A atom is missing from one corner in unit cell. The simplest formula of compound is-
- (1) A_7B_3 (2) AB_3
(3) A_7B_{24} (4) $\text{A}_{7/8}\text{B}_3$
48. Which is/are amorphous solids-
- (1) Rubber (2) Plastics
(3) Glass (4) All
49. A solid has a B.C.C. structure. If the distance of closest approach between the two atoms is $1.73 \text{ \AA}$. The edge length of the cell is-
- (1) 200 pm (2) $\frac{\sqrt{3}}{2} \text{ pm}$
(3) 142.2 pm (4) $\sqrt{2} \text{ pm}$
50. The vacant space in B.C.C. unit cell is-
- (1) 32% (2) 10%
(3) 23% (4) 46%
51. In a face centred cubic lattice the number of nearest neighbour for a given lattice point are-
- (1) 6 (2) 8
(3) 12 (4) 14
52. In a solid, oxide ions are arranged in CCP. Cations A occupy one-sixth of the tetrahedral voids and cations B occupy one-third of the octahedral voids. The formula of the compound is -
- (1) ABO_3 (2) AB_2O_3
(3) A_2BO_3 (4) $\text{A}_2\text{B}_2\text{O}_3$
53. A solid AB has rock salt structure. If the edge length is 520 pm and radius of A^+ is 80 pm, the radius of anion B^- would be -
- (1) 440 pm (2) 220 pm
(3) 360 pm (4) 180 pm
54. A binary solid ($\text{A}^+ \text{B}^-$) has a zinc blende structure with B^- ions constituting the lattice and A^+ ions occupying 25% tetrahedral holes. The formula of solid is-
- (1) AB (2) A_2B
(3) AB_2 (4) AB_4
55. For the structure given below the site marked as S is a-

- (1) Tetrahedral void
(2) Cubic void
(3) Octahedral void
(4) None of these

SPACE FOR ROUGH WORK

56. The mass of a unit cell of CsCl corresponds to-
 (1) 8Cs^+ and 1Cl^- (2) 1Cs^+ and 6Cl^-
 (3) 1Cs^+ and 1Cl^- (4) 4Cs^+ and 4Cl^-
57. The structure of MgO is similar to NaCl. The co-ordination number of Mg is-
 (1) 2 (2) 6
 (3) 4 (4) 8
58. Schottky defect is noticed in-
 (1) NaCl (2) KCl
 (3) CsCl (4) All
59. A cubic crystal possesses in all elements of symmetry-
 (1) 9 (2) 13
 (3) 1 (4) 23
60. The co-ordination number of a body centred atom is-
 (1) 4 (2) 6
 (3) 8 (4) 12
61. A mineral having the formula AB_2 crystallize in cubic close packed lattice with the A atoms occupying the lattice points. The coordination number of atoms of A, atoms of B and the fraction of the tetrahedral sites occupied by B are respectively -
 (1) 2, 6, 75% (2) 8, 4, 100%
 (3) 3, 1, 25% (4) 6, 6, 50%
62. In Corundum, oxide ions are arranged in hcp arrangement and aluminium ion occupy two third of the octahedral holes. Its formula is -
 (1) Al_2O_3 (2) Al_2O_4
 (3) Al_3O_4 (4) AlO_2
63. 8 : 8 coordination number of CsCl change into 6 : 6 on -
 (1) Applying high P
 (2) Increasing temperature
 (3) Both A and B
 (4) Can't be changed
64. Point defect which lowers the density of materials -
 (1) schottky (2) Frenkel
 (3) Both (4) None of these
65. The decreasing order of the size of void is
 (1) Cubic > Octahedral > Tetrahedral > Trigonal
 (2) Trigonal > Tetrahedral > Octahedral > Cubic
 (3) Trigonal > Octahedral > Tetrahedral > Cubic
 (4) Cubic > Tetrahedral > Octahedral > Trigonal
66. In A_xB_y atoms of A occupy each corner of the cube and atom of B occupy centre of each face. The composition will be -
 (1) AB_3 (2) A_2B_3
 (3) A_3B (4) A_3B_4
67. Pink colour in non stoichiometric LiCl is due to -
 (1) Cl^- ions in lattice
 (2) Li^+ ions in lattice
 (3) e^- in lattice
 (4) Both A and B

SPACE FOR ROUGH WORK

68. For a certain decomposition, the rate is 0.30 M sec^{-1} when the concentration of reactant is 0.20 M . If the reaction is second order, the rate (in M sec^{-1}) when concentration is increased 3-times is -
(1) 0.30 (2) 0.90 (3) 0.60 (4) 2.7

69. Select the rate law that corresponds to the data shown for the reaction $\text{A} + \text{B} \rightarrow \text{C}$

Exp.	[A]	[B]	Initial Rate
1.	0.012	0.035	0.10
2.	0.024	0.070	0.80
3.	0.024	0.035	0.10
4.	0.012	0.070	0.80

- (1) Rate = $k [\text{B}]^3$
(2) Rate = $k [\text{B}]^4$
(3) Rate $k = [\text{A}] [\text{B}]^3$
(4) Rate = $k [\text{A}]^2 [\text{B}]^2$
70. The activation energy for the forward reaction $\text{X} \rightarrow \text{Y}$ is $60. \text{ KJ mol}^{-1}$ and ΔH is -20 KJ mol^{-1} , the activation energy for the reverse reaction is -
(1) 40 KJ mol^{-1}
(2) 60 KJ mol^{-1}
(3) 80 KJ mol^{-1}
(4) 20 KJ mol^{-1}
71. In a first order reaction, 75% of the reactant disappeared in 1.386 hours. Calculate the rate constant of the reaction -
(1) $3.6 \times 10^{-3} \text{ sec}^{-1}$
(2) $2.8 \times 10^{-4} \text{ sec}^{-1}$
(3) $7.2 \times 10^{-3} \text{ sec}^{-1}$
(4) $1.8 \times 10^{-3} \text{ sec}^{-1}$

72. A following mechanism has been proposed for a reaction -

The rate law expression for the reaction is -

- (1) $r = k[\text{A}]^2 [\text{B}]$
(2) $r = k [\text{A}] [\text{B}]$
(3) $r = k [\text{A}]^2$
(4) $r = k [\text{A}] [\text{C}]$
73. For a first order reaction $\text{A} \rightarrow \text{products}$, the concentration of $[\text{A}]$ is reduced from 1M to 0.125 M in one hour, the $t_{1/2}$ of this reaction (in sec) is -
(1) 600
(2) 300
(3) 1200
(4) $0.693/1200$
74. The chemical reaction $2\text{O}_3 \rightarrow 3\text{O}_2$ proceeds as follows -
 $\text{O}_3 \rightleftharpoons \text{O}_2 + \text{O} \dots\dots\dots \text{(fast)}$
 $\text{O} + \text{O}_3 \rightarrow 2\text{O}_2 \dots\dots\dots \text{(slow)}$
The rate law expression should be -
(1) $r = k [\text{O}_3]^2$
(2) $r = k [\text{O}_3]^2 [\text{O}_2]^{-1}$
(3) $r = k [\text{O}_3] [\text{O}_2]$
(4) Unpredictable
75. The half life period for a certain first order reaction is 30 minutes. How long will it take for $1/32$ of the reactant to be left behind -
(1) 60 Min. (2) 120 Min.
(3) 90 Min. (4) 150 Min.

SPACE FOR ROUGH WORK

76. As the energy of activation increases –
 (1) The number of reacting molecules colliding decreases
 (2) The rate of reaction decreases
 (3) The rate of reaction increases
 (4) The rate constant increases
77. A hypothetical reaction $A_2 + B_2 \rightarrow 2AB$ follows the mechanism as given below –
 $A_2 \rightleftharpoons A + A$ (fast)
 $A + B_2 \rightarrow AB + B$ (slow)
 $A + B \rightarrow AB$ (fast)
 The order of the over all reaction is –
 (1) 2 (2) 1
 (3) $\frac{3}{2}$ (4) 0
78. The half life period for catalyst decomposition of AB_3 at 50 mm is found to be 4 hrs and at 100 mm it is 2.0 hrs. The order of reaction is –
 (1) 3 (2) 1
 (3) 2 (4) 0
79. Consider a gaseous reaction, the rate of which is given by $k[A][B]$. The volume of the reaction vessel containing these gases is suddenly reduced to $\frac{1}{4}$ th of the initial volume. The rate of the reaction as compared with original rate is –
 (1) $\frac{1}{16}$ times (2) 16 times
 (3) $\frac{1}{8}$ times (4) 8 times
80. If the rate of reaction becomes 2 times for every 10°C rise in temperature, by what factor the rate of reaction increases when temperature is increased from 30°C to 80°C
 (1) 16 (2) 32 (3) 64 (4) 128
81. If the concentration is expressed in moles per litre the unit of the rate constant for a first order reaction is –
 (1) $\text{Mol litre}^{-1} \text{ sec}^{-1}$ (2) Mol litre^{-1}
 (3) sec^{-1} (4) Mol sec^{-1}
82. Which of the following represents the expression for $3/4$ th life of first order reaction
 (1) $\frac{k}{2.303} \log 4/3$ (2) $\frac{2.303}{k} \log 3/4$
 (3) $\frac{2.303}{k} \log 4$ (4) $\frac{2.303}{k} \log 3$
83. The temperature coefficient of most of the reactions lies between –
 (1) 1 and 3 (2) 2 and 3
 (3) 1 and 4 (4) 2 and 4
84. For a hypothetical reaction $A \rightarrow B$, the rate constant is 0.25 sec^{-1} . If the concentration of A is reduced to half then the value of rate constant is –
 (1) 0.25 sec^{-1} (2) 0.30 sec^{-1}
 (3) 0.075 sec^{-1} (4) 2.25 sec^{-1}
85. For the reaction $A \rightarrow B$, data of initial concentration and corresponding half life period are given in the tabular form
- | [A] | 1M | 2M | 4M |
|-----------|------|------|-------|
| $T_{0.5}$ | 300s | 600s | 1200s |
- The order of the reaction is –
 (1) 0 (2) 1 (3) 2 (4) 3

SPACE FOR ROUGH WORK

86. For the chemical reaction:

it is found that the rate of reaction increases by a factor of 6.25 when the concentration of A is increased by a factor 2.5. The order of this reaction with respect to A is -

- (1) 2.5 (2) 2 (3) 1 (4) 0.5

87. A reaction rate constant is given by :

$$k = 1.2 \times 10^{14} e^{\frac{-25000}{RT}} \text{ sec}^{-1}$$

It means -

- (1) log k versus log T will give a straight line with a slope as 25000
(2) log k versus log T will give a straight line with a slope as -25000
(3) log k versus T will give a straight line with a slope as -25000
(4) log k versus 1/T will give a straight line

88. For a reaction

The rate can be expressed in following ways

$$-\frac{d[AB_5]}{dt} = K[AB_5] ; \quad \frac{d[B]}{dt} = K_1[AB_5]$$

So the correct relation between K and K_1 is-

- (1) $K_1 = K$
(2) $K_1 = 2K$
(3) $K_1 = 4K$
(4) $2K_1 = K$

89. For the reaction

the following mechanism has been proposed-

- (1) $k[NO][H_2]^2$
(2) $k[NO][H_2]$
(3) $k[NO]^0[H_2]^3$
(4) $k[NO]^2[H_2]$

90. The progress of the reaction $A \rightleftharpoons nB$, with time is represented by the graph given below-

The value of n is

- (1) 1 (2) 2
(3) 3 (4) 4

SPACE FOR ROUGH WORK

91. Which of the following statements is the most correct regarding excitation of heart muscles?
- (1) Only the nodal musculature has the ability to generate action potential
 - (2) Only the SA node in heart has the ability to generate action potential
 - (3) All the heart muscles have ability to auto excitation
 - (4) Only the purkinje fibre is auto excitable centre of the heart
92. Which of the following factors is not always reported in RBC?
- (A) Antigen
 - (B) Rh factor
 - (C) Nucleus
 - (D) Haemoglobin
 - (E) Biconcave shape
- (1) (A), (B), (C) and (D)
 - (2) (B), (C), (D) and (E)
 - (3) (C), (D) and (E)
 - (4) (A), (B), (C) and (E)
93. Which of the following is a matching pair?
- (1) Initiation of heart beat – Purkinje fibres
 - (2) Pulsation of radial artery – Valves in blood vessels
 - (3) Dup – opening of semilunar valves at the beginning of ventricular systole
 - (4) Lubb – Closure of AV valves at the beginning of ventricular systole
94. Which of the following statements is not correct about all vertebrate's heart?
- (1) Presence of muscular chambered heart
 - (2) Presence of SA node
 - (3) Presence of myogenic heart
 - (4) It always pumps together oxygenated and deoxygenated blood to the different body parts.
95. Which of the following is correct?
- (1) Nearly 70% of blood is received by ventricles during joint diastole
 - (2) Auricular systole and ventricular systole never overlap
 - (3) The duration of joint diastole is 0.4 seconds.
 - (4) All are correct
96. Total thrombocytic count in human blood is :
- (1) 15,000 - 25,000
 - (2) 1,500,00 - 3,500,00
 - (3) 3,000,00 - 5,000,00
 - (4) 10,000 - 20,000
97. Conversion of fibrinogen in fibrin filaments is very important for blood clotting, which occurs by catalysis of :
- (1) Prothrombinase
 - (2) Thrombokinase
 - (3) Thrombin
 - (4) Prothrombin
98. Which of following is incorrect with respect to human heart ?
- (1) It is tetrachambered and myogenic
 - (2) Surrounded by pericardium
 - (3) Located in mediastinum
 - (4) Endodermal in origin
99. Select a correct statement about working of heart :
- (1) It beats 72 times per minute
 - (2) Pumps 70 ml blood in each aorta by single systole
 - (3) Produces LUBB and DUP sound in each cardiac cycle
 - (4) All of these.
100. Myocardial ischemia is insufficient blood and O_2 supply to heart wall which is initially characterised by:
- (1) Cardiac arrest
 - (2) Angina pectoris
 - (3) Heart failure
 - (4) Hypertension

101. Human heart has four chambers which are labelled as A, B, C & D. The direction of blood flow and its oxygen content is as shows below :-

Here the correct names of A, B, C & D will be :-

- (1) A – Right Atrium; B – Right Ventricle;
C – Left Atrium ; D – Left Ventricle
(2) A – Right Ventricle; B – Left Atrium;
C – Left Ventricle ; D – Right Atrium
(3) A – Left Atrium; B – Left Ventricle;
C – Right Atrium; D – Right Ventricle
(4) A – Left Ventricle; B – Right Atrium;
C – Right Ventricle; D – Left Atrium
102. If six liters of deoxygenated blood enter the lungs via pulmonary artery in one minute time then the amount of oxygenated blood which will exit the lungs via pulmonary veins in a minute time will be :-

- (1) 6 litre (2) < 6 litre
(3) > 6 litre (4) Data insufficient

103. Match the blood vessels of human heart listed under column-I with the functions given under column-II. Choose the answer which gives the correct combination of the alphabets of the two columns.

Column-I (Blood vessel)		Column-II (Function)	
(A)	Superior vena cava	p.	Carries denxygenated blood to lungs
(B)	Inferior vena cava	q.	Carries oxygenated blood from lungs
(C)	Pulmonary artery	r.	Brings deoxygenated blood from lower parts of the body to the right atrium
(D)	Pulmonary vein	s.	Brings oxygenated blood to the left atrium
		t.	Brings deoxygenated blood from upper parts of the body into the right atrium

- (1) A = t, B = p, C = r, D = q
(2) A = t, B = r, C = p, D = s
(3) A = s, B = t, C = r, D = p
(4) A = t, B = p, C = q, D = r

104. What is the state of heart in the interval after end of second heart sound and before beginning of first heart sound again :-

- (1) Ventricle remain in systole Auricles undergo first diastole and then systole
(2) Ventricle remain in diastole Auricles undergo first diastole and then systole
(3) Ventricles undergo first systole and then diastole Auricles remain in diastole
(4) Ventricles remain in diastole Auricles remain in systole

105. Volume of blood pumped out by each ventricle per minute is called :-

- (1) Stroke volume
(2) Cardiac output
(3) Cardiac index
(4) Tidal volume

106. In ECG, P-wave represents

- (1) Atrial repolarization
(2) Atrial depolarization
(3) Ventricular depolarization
(4) Ventricular repolarization

107. Pulse pressure is

- (1) Systolic pressure
(2) Diastolic pressure
(3) Pressure in vena cava
(4) Difference between systolic and diastolic pressure

108. Which of the following is incorrect labelling w.r.t. the diagram given below?

- (1) D - Pulmonary vein
- (2) C - Pulmonary artery
- (3) E - Aorta
- (4) F - Carotid artery

109. If the heart sound recording and ECG recording are superimposed then the first heart sound would occur

- (1) At the P-wave
- (2) Just after P-wave
- (3) Just before QRS complex
- (4) Just after QRS complex

110. The greatest percentage of blood volume is found in

- (1) Veins
- (2) Arteries
- (3) Capillaries
- (4) Heart

111. Death of a part of heart muscle due to cessation of blood supply to it is called

- (1) Heart failure
- (2) Heart attack
- (3) Heart block
- (4) Cardiac arrest

112. In a study of four blood vessels A, B, C & D in man, vessel 'A' carried pure blood away from heart. Vessel 'B' carried impure blood towards heart. Vessel 'C' carried pure blood into the heart musculature while vessel 'D' carried impure blood away from heart. The correct names of the four vessels can be :

- (1) Coronary artery-A, Pulmonary vein-B, Pulmonary Artery-C, SVC-D
- (2) Pulmonary vein-A, Pulmonary Artery-B, Coronary vein-C, Coronary Artery-D
- (3) Systemic Aorta-A, Vena cava-B, Coronary artery-C, Pulmonary vein-D
- (4) Systemic Aorta-A, Vena cava-B, Coronary Artery-C, Pulmonary Artery-D

113. Please observe the diagram below

Here vessel A, B and C are -

- (1) A - Hepatic vein
B - Portal vein
C - Hepatic artery
- (2) A - Portal vein
B - Hepatic artery
C - Hepatic vein
- (3) A - Hepatic artery
B - Hepatic vein
C - Portal vein
- (4) A - Portal vein
B - Hepatic vein
C - Hepatic artery

114. In a human cardiac cycle which of the following statement is false :-

- (1) The time taken for one cardiac cycle decreases in Tachycardia
- (2) The time interval for joint Diastole in heart is about 0.4 seconds
- (3) The time interval for joint systole in heart is about 0.4 second
- (4) Left ventricle takes 0.5 seconds to complete one diastole

115. Consider the following four statements (a-d) and select the option which includes all the correct :-

- (a) Coronary Artery disease. (CAD) often referred to as Atherosclerosis
- (b) Heart failure means when the heart muscle is suddenly damaged by an inadequate blood supply
- (c) High blood pressure leads to heart diseases and also affects vital organs like brain and kidney
- (d) Angina occurs due to conditions that affect the blood flow

Options :-

- (1) Statements (b), (c) and (d)
- (2) Statements (a), (b)
- (3) Statements (b), (d)
- (4) Statement (a), (c) and (d)

116. Given below is a table showing various blood groups and donor compatibility. Identify the incorrect option :-

Blood Group	Antigens on RBCs	Antibodies in Plasma	Donor's Group
(1) A	A	anti-B	A, O
(2) B	B	anti-A	B, O
(3) AB	A, B	anti-A, B	AB, A, B, O
(4) O	nil	anti-A, B	O

- (A) Sharp sound with high pitch
- (B) Appears at the beginning of joint diastole
- (C) Appears at the beginning of ventricular systole
- (D) Appears at the beginning of ventricular diastole.
- (E) Appears 0.3 seconds past after atrial systole

E-18/24

(F) Caused due to the closure of semilunar valves

(G) Caused due to the closure of cuspid valves

Which of the following statements are true for sound 'A' ?

- (1) A, B, D, E and F
- (2) A, B, D and F
- (3) A, D, E and F
- (4) A, B, C, E and G

118. Which of the following vitamin is essential for blood clotting?

- (1) Vitamin D
- (2) Vitamin E
- (3) Vitamin K
- (4) Vitamin B₁₀

119. Blood clotting can be prevented by adding oxalates or citrates which form insoluble complex with

- (1) Fibrin
- (2) Thrombin
- (3) Stable factor
- (4) Calcium

120. Atrioventricular node (AV node) is present in

- (1) Right upper corner of right atrium
- (2) Lower left corner of right atrium
- (3) Right ventricle
- (4) Left atrium

121. Human heart is myogenic because

- (1) Sympathetic nerves can increase heart rate
- (2) Impulse for heart beat is generated in SA node
- (3) Impulse for heart beat is generated outside the heart
- (4) Myocardium is present in heart wall

122. In the foetal heart, ductus arteriosus connects

- (1) Pulmonary artery with pulmonary vein
- (2) Pulmonary artery with systemic aorta
- (3) Right atrium and left atrium
- (4) Pulmonary vein with systemic aorta

123. The exchange of materials between blood and interstitial fluid takes place through

- (1) Veins
- (2) Arteries
- (3) Arterioles
- (4) Capillaries

RJT/1201CMD302119026

124. Slowing down of heart rate is called

- (1) Tachycardia
- (2) Bradycardia
- (3) Bradypnoea
- (4) Dextrocardia

125. Heart rate is accelerated by

- (1) Parasympathetic nerves and acetylcholine
- (2) Sympathetic nerves and epinephrine
- (3) Sympathetic nerves and acetylcholine
- (4) Parasympathetic nerves and epinephrine

126. If vagus nerve is stimulates, the heart rate

- (1) Increases
- (2) Decreases
- (3) Remains unchanged
- (4) First increases, then decreases

127. Ventricles are related to

- (1) Heart
- (2) Brain
- (3) Both (1) and (2)
- (4) Kidneys

128. Maximum surface area of circulating system is seen in:

- (1) Heart
- (2) Veins
- (3) Arterioles
- (4) Capillaries

129. Which of the following is absent in humans?

- (1) Hepatic vein
- (2) Hepatic portal vein
- (3) Renal portal vein
- (4) Hypophysial portal vein

130. Hardening and loss of elasticity of the arteries is called

- (1) Atherosclerosis
- (2) Arteriosclerosis
- (3) Stroke
- (4) Heart failure

131. Inability of heart to pump sufficient blood is called

- (1) Heart block
- (2) Heart failure
- (3) Heart attack
- (4) Angina pectoris

132. Which of the following is correct regarding ECG?

- (1) By counting the number of QRS complexes that occur in a given time period, the heart beat rate of a person can be determined
- (2) P-wave represents the electrical excitation of the atria that leads to contraction of both atria
- (3) T-wave represents the returning of ventricles from excited to the normal state
- (4) All are correct

133. Cancerous proliferation of WBCs is called

- (1) Leucocytosis
- (2) Leukemia
- (3) Leucopenia
- (4) Polycythemia

134. Platelets are formed due to breakdown of large cells called:

- (1) Erythroblast
- (2) Myeloblast
- (3) Leucoblast
- (4) Megakaryocyte

135. The role of platelets is

- (1) Transport oxygen
- (2) Provide immunity
- (3) Secrete structural proteins
- (4) Blood clotting

136. Erythroblastosis foetalis can occur if the blood group of father and mother is respectively

- (1) Rh -ve and Rh +ve
- (2) Rh +ve and Rh +ve
- (3) Rh +ve and Rh -ve
- (4) Rh -ve and Rh -ve

137. Rhesus antigen is present

- (1) On the surface of WBCs
- (2) In plasma
- (3) On the surface of RBCs
- (4) On the surface of platelets

138. A patient with unknown blood group needed blood transfusion immediately after getting injured in a road accident. His one doctor friend at once offers his blood. What was the blood group of the donor?
- Blood group AB
 - Blood group A
 - Blood group B
 - Blood group O.
139. Maximum urea levels are present in
- Hepatic portal vein
 - Hepatic vein
 - Renal vein
 - Hepatic artery
140. Hypophyseal portal veins carry blood from hypothalamus to
- Anterior pituitary
 - Posterior pituitary
 - Thyroid
 - Thymus
141. An artery has
- Thin wall and blood moves at high pressure
 - Thick wall and blood moves at high pressure
 - Thin wall and blood moves at low pressure
 - Thick wall and blood moves at low pressure
142. What is the circulatory system?
- The body's breathing system
 - The body's system of nerves
 - The body's food-processing system
 - The body's blood-transporting system
143. From what source do cells get their food?
- Blood
 - Oxygen
 - Other cells
 - Carbon dioxide

144. Identify the given figure.

Select correct statements.

- Opiates are obtained from this plant.
 - It is member of family *cannabaceae*
 - It is commonly known as poppy plant.
- I and III
 - I and II
 - II and III
 - I, II and III

145. Smack is -

- Obtained by acetylation of morphine
- White and odourless
- Bitter crystalline compound
- All of these

146. Identify the compound on the basis of given chemical structure and select its main therapeutic use-

- To increase the activity of cardiovascular system
 - As an analgesics
 - As an antipyretic
 - None of these
147. Which is not true for cocaine ?
- Commonly called coke
 - Obtained from *Erythroxylum coca*
 - Produce sense of euphoria
 - Obtained from *Papaver somniferum*

148. Cannabinoid receptors are present principally in-

- (1) Brain (2) Liver
(3) Heart (4) Lungs

149. Which of the following has stimulatory effect on central nervous system.

- (1) Morphine (2) Smack
(3) Codein (4) Crack

150. How many of the following are direct or indirect effects of nicotine ?

- (I) Release of adrenaline and nor-adrenaline in to blood circulation.
(II) Increased blood pressure
(III) Increased heart beat rate.

- (1) 3 (2) 2
(3) 1 (4) 0

151. How many of the following are cannabinoids ?

Marijuana ; Hashish ; LSD ; Ganja

- (1) 2 (2) 1
(3) 3 (4) 4

152. Select the organs which are affected by smoking-

- (A) Lungs ; (B) Heart ;
(C) Arteries ; (D) Stomach

- (1) A and B only
(2) B and C only
(3) A, B and C only
(4) A, B, C and D

153. Which of the following disorder is associated with alcoholism ?

- (1) Wernicke- Korsakoff syndrome
(2) Bantis Syndrome
(3) Edward Syndrome
(4) Cushing's syndrome

154. Select the disorder which can be caused due to alcoholism-

- (1) Neuritis
(2) Liver Cirrhosis
(3) Gastritis
(4) More than options are correct

155. Select correct statements for barbiturates.

- (I) Used as medicines to cope with mental illness like depression and insomnia.

- (II) These are synthetic drugs derived from barbituric acid.

- (III) Have stimulatory effect on CNS.

- (1) I and II
(2) I and III
(3) II and III
(4) All I, II and III

156. Nicotine is -

- (1) Produced and stored in leaves of *Papaver somniferum*

- (2) Produced and stored in roots of *Ethroxylum coca*

- (3) Produced in leaves and stored in stem of *Atropa* plant

- (4) Produced in roots and stored in leaves of *Nicotiana rustica*

157. Select the side effects of anabolic steroids which can occur in both males and females-

- (I) Increased aggressiveness

- (II) Mood swings

- (III) Depression

- (1) I and II (2) II and III
(3) I, II and III (4) Only III

158. Which of the following has teratogenic effect ?

- (1) Alcohol (2) Tobacco
(3) Thalidomide (4) All of these

159. Select the statement(s) about adolescence :-

- (1) The period between 12-18 years is adolescence period

- (2) Adolescence is a bridge linking childhood and adulthood.

- (3) It is a very vulnerable phase of mental and psychological development of an individual

- (4) All of these

160. Which of the following is a breed of cattle ?

- (1) Sahiwal (2) Tharparkar
(3) Rathi (4) All of these

161. Which strain of virus was responsible for bird flue epidemics few years ago?
 (1) H_2N_2 (2) H_5N_1
 (3) H_1N_5 (4) H_1N_1
162. Which is not a result of inbreeding ?
 (1) Increased homozygosity
 (2) Development of pure lines
 (3) Expression of harmful recessive genes
 (4) Increased fertility and productivity due to continued close inbreeding
163. The practice of mating of animals within the same breed but having no common ancestors on either side of their pedigree up to 4-6 generations, is known as-
 (1) Out crossing
 (2) Cross breeding
 (3) Inter species hybridisation
 (4) Inbreeding
164. Hissardale is an example of -
 (1) out cross
 (2) cross breed
 (3) Inbreed
 (4) Inter species hybridisation
165. How many of the following are benefits of A.I. ?
 • Increased efficiency of bull usage
 • Increased potential for genetic selection
 • Decreased cost
 • Reduced disease transmission
 (1) 4 (2) 3
 (3) 2 (4) 1
166. Vinyl chloride causes cancer of -
 (1) Lungs (2) Liver
 (3) Skin (4) Prostate gland
167. The most common species of honey bee, used in apiculture is
 (1) *Apis indica*
 (2) *Apis dorsata*
 (3) *Apis florea*
 (4) *Apis Mellifera*
168. If we classify the edible fishes into two groups A and B
 (1) If 'A' refers to marine, Rohu is its an example.
 (2) If 'B' refers to Marine, catla is its an example
 (3) If 'B' refers to fresh water fishes, Hilsa is not its example.
 (4) More than one options are correct.
169. Select mismatch-
 (1) Blue revolution — Fish production
 (2) Green revolution — Plant food production
 (3) White revolution — Milk production
 (4) None of these
170. LSD is :
 (1) Lysing diethyl amide
 (2) Lysergic acid diethyl amide
 (3) Lysing dimethyl amide
 (4) Lysergic dimethyl amide
171. Drugs which include dreamy state of consciousness are called :
 (1) Sedatives
 (2) Barbiturates
 (3) Stimulants
 (4) Hallucinogens
172. The drug which stimulates the nervous system and makes a person more alert and active is called :
 (1) Sedative
 (2) Opiate narcotic
 (3) Stimulant
 (4) Hallucinogen
173. Which one of the following is correct statement regarding the particular psychotropic drug specified :
 (1) Morphine leads to delusions and disturbed emotions
 (2) Barbiturates cause relaxation and temporary euphoria
 (3) Hashish alter thought, perceptions and cause hallucinations
 (4) Opium stimulates nervous system and cause hallucination

174. LSD is prepared from :

- (1) Lichens (2) Algae
- (3) Bacteria (4) Fungus

175. Antisleep pills are made of :

- (1) Barbiturates
- (2) Benzodiazepines
- (3) Amphetamines
- (4) Both (1) and (2)

176. Parkinson's disease (characterized by tremors and progressive rigidity of limbs) is caused by degeneration of brain neurons that are involved in movement control and make use of neurotransmitter :

- (1) Acetylcholine
- (2) Norepinephrine
- (3) Dopamine
- (4) GABA

177. Sports persons are frequently abusing the drug known as :

- (1) Morphine
- (2) Cocaine
- (3) Heroin
- (4) Amphetamine

178. Which one of the following statements is correct :

- (1) Heroin accelerates body functions
- (2) Malignant tumours exhibit metastasis
- (3) Patients who have undergone surgery are given cannabinoids to relieve pain
- (4) Benign tumours show the property of metastasis

179. Select the correct statements from the ones given below :
