

CLASSROOM CONTACT PROGRAMME

(ACADEMIC SESSION 2018-2019)

PRE-MEDICAL : NURTURE COURSE [PHASE-III]

TEST # 07

DATE : 03-11-2018

Test Type : Minor

Test Pattern : AIIMS

INSTRUCTIONS

Do not open this Test Booklet until you are asked to do so

1. Immediately fill in the form number on this page of the Test Booklet with Blue/Black Ball Point Pen. Use of pencil is strictly prohibited.
2. The candidates should not write their Form Number anywhere else (except in the specified space) on the Test Booklet/Answer Sheet.
3. The test is of **3 hours** duration.
4. The Test Booklet consists of **180** questions. The maximum marks are **180**.
5. **Each correct answer carry 1 mark. While one third mark will be deducted for each incorrect answer.**
6. Use **Blue/Black Ball Point Pen only** for writing particulars/markings responses on **Side-1** the Answer Sheet. **Use of pencil is strictly prohibited.**
7. No candidate is allowed to carry any textual material, printed or written, bits of papers, pager, mobile phone any electronic device etc, except the Identity Card inside the examination hall/room.
8. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
9. On completion of the test, the candidate must hand over the Answer Sheet to the invigilator on duty in the Room/Hall. **However, the candidate are allowed to take away this Test Booklet with them.**
10. **Do not fold or make any stray marks on the Answer Sheet.**

BEWARE OF NEGATIVE MARKING

- | | |
|--|--|
| <p>1. If a cyclist moving with a speed of 4.9 m/s on a level road can take a sharp circular turn of radius 4 m, then coefficient of friction between the cycle tyres and road is
 (1) 0.41 (2) 0.51 (3) 0.61 (4) 0.71</p> <p>2. The maximum velocity (in ms^{-1}) with which a car driver must traverse a flat curve of radius 150 m and coefficient of friction 0.6 to avoid skidding is
 (1) 60 (2) 30 (3) 15 (4) 25</p> <p>3. A motor cycle driver doubles its velocity when he is having a turn. The force exerted outwardly will be
 (1) Double (2) Half
 (3) 4 times (4) $\frac{1}{4}$ times</p> <p>4. A person with his hands in his pockets is skating on ice at the velocity of 10 m/s and describes a circle of radius 50 m. What is his inclination with vertical
 (1) $\tan^{-1}\left(\frac{1}{10}\right)$ (2) $\tan^{-1}\left(\frac{3}{5}\right)$
 (3) $\tan^{-1}(1)$ (4) $\tan^{-1}\left(\frac{1}{5}\right)$</p> <p>5. If the radius of curvature of the path of two particles of same masses are in the ratio $1 : 2$, then in order to have constant centripetal force, their velocity, should be in the ratio of
 (1) $1 : 4$ (2) $4 : 1$
 (3) $\sqrt{2} : 1$ (4) $1 : \sqrt{2}$</p> | <p>6. A car of mass 800 kg moves on a circular track of radius 40 m. If the coefficient of friction is 0.5, then maximum velocity with which the car can move is
 (1) 7 m/s (2) 14 m/s
 (3) 8 m/s (4) 12 m/s</p> <p>7. A mass is supported on a frictionless horizontal surface. It is attached to a string and rotates about a fixed centre at an angular velocity ω_0. If the length of the string and angular velocity are doubled, the tension in the string which was initially T_0 is now
 (1) T_0 (2) $T_0/2$
 (3) $4T_0$ (4) $8T_0$</p> <p>8. A bucket tied at the end of a 1.6 m long string is whirled in a vertical circle with constant speed. What should be the minimum speed so that the water from the bucket does not spill, when the bucket is at the highest position (Take)
 (1) 4 m/sec
 (2) 6.25 m/sec
 (3) 16 m/sec
 (4) None of the above</p> <p>9. A wheel is subjected to uniform angular acceleration about its axis. Initially its angular velocity is zero. In the first 2 sec, it rotates through an angle θ_1. In the next 2 sec, it rotates through an additional angle θ_2. The ratio of $\frac{\theta_2}{\theta_1}$ is :-
 (1) 1 (2) 2 (3) 3 (4) 5</p> |
|--|--|

SPACE FOR ROUGH WORK

- | | |
|--|--|
| <p>10. A 1 kg stone at the end of 1 m long string is whirled in a vertical circle at constant speed of 4 m/sec. The tension in the string is 6 N, when the stone is at ($g = 10 \text{ m/sec}^2$)</p> <p>(1) Top of the circle
(2) Bottom of the circle
(3) Half way down
(4) None of the above</p> <p>11. A 2 kg stone at the end of a string 1 m long is whirled in a vertical circle at a constant speed. The speed of the stone is 4 m/sec. The tension in the string will be 52 N, when the stone is</p> <p>(1) At the top of the circle
(2) At the bottom of the circle
(3) Halfway down
(4) None of the above</p> <p>12. If the equation for the displacement of a particle moving on a circular path is given by $(\theta) = 2t^3 + 0.5$, where θ is in radians and t is in seconds, then the angular velocity of the particle after 2 sec from its start is</p> <p>(1) 8 rad/sec (2) 12 rad/sec
(3) 24 rad/sec (4) 36 rad/sec</p> <p>13. A uniform chain of length 2m is kept on a table such that a length of 60cm hangs freely from the edge of the table. The total mass of the chain is 4kg. What is the work done in pulling the entire chain on the table</p> <p>(1) 7.2 J (2) 3.6 J
(3) 120 J (4) 1200 J</p> <p>14. A particle is acted upon by a force of constant magnitude which is always perpendicular to the velocity of the particle, the motion of the particle takes place in a plane. It follows that</p> | <p>(1) Its velocity is constant
(2) Its acceleration is constant
(3) Its kinetic energy is constant
(4) It moves in a straight line</p> <p>15. A force $\vec{F} = (5\hat{i} + 3\hat{j} + 2\hat{k})\text{N}$ is applied over a particle which displaces it from its origin to the point $\vec{r} = (2\hat{i} - \hat{j})\text{m}$. The work done on the particle in joules is</p> <p>(1) -7 (2) +7 (3) +10 (4) +13</p> <p>16. The potential energy of a certain spring when stretched through a distance 'S' is 10 joule. The amount of work (in joule) that must be done on this spring to stretch it through an additional distance 'S' will be</p> <p>(1) 30 (2) 40 (3) 10 (4) 20</p> <p>17. Two springs of spring constants 1500 N/m and 3000 N/m respectively are stretched with the same force. They will have potential energy in the ratio</p> <p>(1) 4 : 1 (2) 1 : 4
(3) 2 : 1 (4) 1 : 2</p> <p>18. A spring with spring constant k when stretched through 1 cm, the potential energy is U. If it is stretched by 4 cm. The potential energy will be</p> <p>(1) 4U (2) 8U (3) 16 U (4) 2U</p> <p>19. The spring extends by x on loading, then energy stored by the spring is :
(if T is the tension in spring and k is spring constant)</p> <p>(1) $\frac{T^2}{2k}$ (2) $\frac{T^2}{2k^2}$ (3) $\frac{2k}{T^2}$ (4) $\frac{2T^2}{k}$</p> |
|--|--|

SPACE FOR ROUGH WORK

|---|---|
| <p>20. The potential energy between two atoms in a molecule is given by $U(x) = \frac{a}{x^{12}} - \frac{b}{x^6}$; where a and b are positive constants and x is the distance between the atoms. The atom is in stable equilibrium when</p> <p>(1) $x = \sqrt[6]{\frac{11a}{5b}}$ (2) $x = \sqrt[6]{\frac{a}{2b}}$</p> <p>(3) $x = 0$ (4) $x = \sqrt[6]{\frac{2a}{b}}$</p> <p>21. A bomb of mass 3.0 Kg explodes in air into two pieces of masses 2.0 kg and 1.0 kg. The smaller mass goes at a speed of 80 m/s. The total energy imparted to the two fragments is</p> <p>(1) 1.07 kJ (2) 2.14 kJ</p> <p>(3) 2.4 kJ (4) 4.8 kJ</p> <p>22. Two equal masses m_1 and m_2 moving along the same straight line with velocities + 3 m/s and – 5 m/s respectively collide elastically. Their velocities after the collision will be respectively</p> <p>(1) + 4 m/s for both</p> <p>(2) – 3 m/s and +5 m/s</p> <p>(3) – 4 m/s and + 4 m/s</p> <p>(4) – 5 m/s and + 3 m/s</p> <p>23. A body falling from a height of 10m rebounds from hard floor. If it loses 20% energy in the impact, then coefficient of restitution is</p> <p>(1) 0.89 (2) 0.56</p> <p>(3) 0.23 (4) 0.18</p> | <p>24. A tennis ball dropped from a height of 2 m rebounds only 1.5 m after hitting the ground. What fraction of its energy is lost in the impact</p> <p>(1) $\frac{1}{4}$ (2) $\frac{1}{2}$</p> <p>(3) $\frac{1}{3}$ (4) $\frac{1}{8}$</p> <p>25. A body of mass m moving with velocity v makes a head-on collision with another body of mass 2 m which is initially at rest. The loss of kinetic energy of the colliding body (mass m) is</p> <p>(1) $\frac{1}{2}$ of its initial kinetic energy</p> <p>(2) $\frac{1}{9}$ of its initial kinetic energy</p> <p>(3) $\frac{8}{9}$ of its initial kinetic energy</p> <p>(4) $\frac{1}{4}$ of its initial kinetic energy</p> <p>26. A particle of mass m moving with velocity v strikes a stationary particle of mass 2m and sticks to it. The speed of the system will be</p> <p>(1) $v/2$ (2) $2v$</p> <p>(3) $v/3$ (4) $3v$</p> |
|---|---|

SPACE FOR ROUGH WORK

27. Three point masses m_1 , m_2 and m_3 are placed at the corners of a thin massless rectangular sheet ($1.2 \text{ m} \times 1.0 \text{ m}$) as shown. Centre of mass will be located at the point

- (1) $(0.8, 0.6) \text{ m}$ (2) $(0.6, 0.8) \text{ m}$
(3) $(0.4, 0.4) \text{ m}$ (4) $(0.5, 0.6) \text{ m}$
28. Figure shows a composite system of two uniform rods of lengths as indicated. Then the coordinates of the centre of mass of the system of rods are

- (1) $\left(\frac{L}{2}, \frac{2L}{3}\right)$ (2) $\left(\frac{L}{4}, \frac{2L}{3}\right)$
(3) $\left(\frac{L}{6}, \frac{2L}{3}\right)$ (4) $\left(\frac{L}{6}, \frac{L}{3}\right)$
29. A circular plate of diameter 'a' is kept in contact with a square plate of side a as shown. The density of the material and the thickness are same everywhere. The centre of mass of composite system will be

- (1) Inside the circular plate
(2) Inside the square plate
(3) At the point of contact
(4) Outside the system

30. From a uniform square plate, one-fourth part is removed as shown. The centre of mass of remaining part will lie on

- (1) OC (2) OA (3) OB (4) OD
31. Two particles A and B initially at rest move towards each other under a mutual force of attraction. At the instant when velocity of A is v and that of B is $2v$, the velocity of centre of mass of the system
- (1) v (2) $2v$ (3) $3v$ (4) Zero
32. A ball of mass m is thrown upward and another ball of same mass is thrown downward so as to move freely under gravity. The acceleration of centre of mass is
- (1) g (2) $\frac{g}{2}$ (3) $2g$ (4) 0
33. A man of mass m starts moving on a plank of mass M with constant velocity v with respect to plank. If the plank lies on a smooth horizontal surface, then velocity of plank with respect to ground is

- (1) $\frac{Mv}{m+M}$ (2) $\frac{mv}{M}$
(3) $\frac{Mv}{m}$ (4) $\frac{mv}{m+M}$

SPACE FOR ROUGH WORK

34. A wheel starts from rest and attains an angular velocity of 20 radian/s after being uniformly accelerated for 10 s. The total angle in radian through which it has turned in 10 second is

(1) 20π (2) 40π
(3) 100 (4) 100π

35. Three solid spheres each of mass P and radius Q are arranged as shown in fig. The moment of inertia of the arrangement about YY' axis

(1) $\frac{7}{5}PQ^2$ (2) $\frac{14}{5}PQ^2$
(3) $\frac{16}{5}PQ^2$ (4) $\frac{5}{14}PQ^2$

36. Three rods each of mass m and length L are joined to form an equilateral triangle as shown in the figure. What is the moment of inertia about an axis passing through the centre of mass of the system and perpendicular to the plane?

(1) $2mL^2$ (2) $\frac{mL^2}{2}$
(3) $\frac{mL^2}{3}$ (4) $\frac{mL^2}{6}$

37. If the system is released, then the acceleration of the centre of mass of the system is :-

(1) $\frac{g}{4}$ (2) $\frac{g}{2}$ (3) g (4) 2g

38. The moment of inertia of a body does not depend on :-

(1) the mass of the body
(2) the angular velocity of the body
(3) the axis of rotation of the body
(4) the distribution of the mass in the body

39. The moment of inertia of a circular ring of radius R and mass M about a tangent in its plane is :-

(1) MR^2 (2) $(1/2)MR^2$
(3) $(3/2)MR^2$ (4) $2MR^2$

40. The moment of inertia of a straight thin rod of mass M, length L about an axis perpendicular to its length and passing through its one end is :-

(1) $\frac{1}{12}ML^2$ (2) $\frac{1}{3}ML^2$
(3) $\frac{1}{2}ML^2$ (4) ML^2

SPACE FOR ROUGH WORK

41. The wavelengths of electron waves in two orbits is 3 : 5. The ratio of kinetic energy of electrons will be:
(1) 25 : 9 (2) 5 : 3
(3) 9 : 25 (4) 3 : 5
42. Which of the following electronic configurations, an atom has the lowest ionisation enthalpy?
(1) $1s^2 2s^2 2p^3$ (2) $1s^2 2s^2 2p^6 3s^1$
(3) $1s^2 2s^2 2p^6$ (4) $1s^2 2s^2 2p^5$
43. How many d-electrons in Cu^+ (At. No. = 29) can have the spin quantum number $\left(-\frac{1}{2}\right)$?
(1) 3 (2) 7 (3) 5 (4) 9
44. Which of the following sets of quantum numbers represents the highest energy of an atom?
(1) $n = 3, l = 0, m = 0, s = +\frac{1}{2}$
(2) $n = 3, l = 1, m = 1, s = +\frac{1}{2}$
(3) $n = 3, l = 2, m = 1, s = +\frac{1}{2}$
(4) $n = 4, l = 0, m = 0, s = +\frac{1}{2}$
45. According to Bohr theory, the angular momentum of electron in 5th orbit is:
(1) $25\frac{h}{\pi}$ (2) $1\frac{h}{\pi}$
(3) $10\frac{h}{\pi}$ (4) $2.5\frac{h}{\pi}$
46. The number of radial nodes of 3s- and 2p-orbitals are respectively :-
(1) 2, 0 (2) 0, 2
(3) 1, 2 (4) 2, 1
47. Which of the following statements in relation to the hydrogen atom is correct?
(1) 3s-orbital is lower in energy than 3p - orbital
(2) 3p-orbital is lower in energy than 3d-orbital
(3) 3s-and 3p-orbitals are of lower energy than 3d-orbital
(4) 3s, 3p and 3d-orbitals all have the same energy
48. 5 moles of an ideal gas at 27°C expands isothermally and reversibly from a volume of 6 L to 60 L. The work done in kJ is :
(1) -14.7 (2) -28.72
(3) +28.72 (4) -56.72
49. 1 litre-atm work is approximately equal to :-
(1) 101.3 J (2) 8.314 J
(3) 931 J (4) 19.2 J
50. A system absorbs 20 kJ heat and also does 10 kJ of work. The net internal energy of the system:
(1) increases by 10 kJ
(2) decreases by 10 kJ
(3) increases by 30 kJ
(4) decreases by 30 kJ

SPACE FOR ROUGH WORK

51. The standard molar heat of formation of ethane, CO_2 and $\text{H}_2\text{O}(l)$ are respectively -21.1 , -94.1 and -68.3 kcal. The standard molar heat of combustion of ethane will be :-

- (1) -372 kcal (2) -240 kcal
(3) 162 kcal (4) 183.5 kcal

52. ΔH_f° 298 K of methanol is given by the chemical equation :-

- (1) $\text{CH}_4(g) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{CH}_3\text{OH}(g)$
(2) $\text{C}(\text{graphite}) + \frac{1}{2}\text{O}_2(g) + 2\text{H}_2(g) \longrightarrow \text{CH}_3\text{OH}(l)$
(3) $\text{C}(\text{diamond}) + \frac{1}{2}\text{O}_2(g) + 2\text{H}_2(g) \longrightarrow \text{CH}_3\text{OH}(l)$
(4) $\text{CO}(g) + 2\text{H}_2(g) \longrightarrow \text{CH}_3\text{OH}(l)$

53. At 0°C , ice and water are in equilibrium and enthalpy change for the process

$\text{H}_2\text{O}(s) \rightleftharpoons \text{H}_2\text{O}(l)$ is 6 kJ mol^{-1} . Calculate the entropy change for the conversion of ice into liquid water.

- (1) $0.02198 \text{ JK}^{-1} \text{ mol}^{-1}$
(2) $21.98 \text{ JK}^{-1} \text{ mol}^{-1}$
(3) $21.98 \text{ kJ K}^{-1} \text{ mol}^{-1}$
(4) $219.8 \text{ JK}^{-1} \text{ mol}^{-1}$

54. A schematic plot of $\log K_{\text{eq}}$ vs inverse of temperature for a reaction is shown in the figure. The reaction must be:

- (1) exothermic
(2) endothermic
(3) one with negligible enthalpy change
(4) highly spontaneous at ordinary temperature

55. Given :

The equilibrium constant for

will be :-

- (1) $K_1 K_2 K_3$ (2) $\frac{K_1 K_2}{K_3}$
(3) $\frac{K_1 K_3^2}{K_2}$ (4) $\frac{K_2 K_3^3}{K_1}$

56. For the reaction, $\text{N}_2(g) + \text{O}_2(g) \rightleftharpoons 2\text{NO}(g)$ the value of K_c at 800°C is 0.1 . When the equilibrium concentrations of both the reactants is 0.5 mol , what is the value of K_p at the same temperature?

- (1) 0.5 (2) 0.1
(3) 0.01 (4) 0.025

57. $\text{A}(g) + 3\text{B}(g) \rightleftharpoons 4\text{C}(g)$ initial concentration of A is equal to that of B. The equilibrium concentrations of A and C are equal. K_c of the reaction will be:

- (1) 0.08 (2) 0.8
(3) 8 (4) 80

SPACE FOR ROUGH WORK

58. For a hypothetical reaction :
 $4A(g) + 5B(g) \rightleftharpoons 4P(g) + 6Q(g)$ The equilibrium constant K_c has units:
 (1) mol L^{-1} (2) $\text{mol}^{-1} \text{L}$
 (3) $(\text{mol L}^{-1})^{-2}$ (4) unitless
59. Consider the following reversible reaction at equilibrium:
 $2\text{H}_2\text{O}(g) \rightleftharpoons 2\text{H}_2(g) + \text{O}_2(g); \Delta H = + 24.7 \text{ kJ}$
 which one of the following changes in conditions will lead to maximum decomposition of $\text{H}_2\text{O}(g)$?
 (1) Increasing both temperature and pressure
 (2) Decreasing temperature and increasing pressure
 (3) Increasing temperature and decreasing pressure
 (4) Increasing temperature at constant pressure
60. At constant pressure, the addition of argon to :
 $\text{N}_2(g) + 3\text{H}_2(g) \rightleftharpoons 2\text{NH}_3(g)$ will :
 (1) shift the equilibrium in forward direction
 (2) shift the equilibrium in backward direction
 (3) not affect the equilibrium
 (4) stop the reaction
61. The vapour density of PCl_5 is 104.25 but when heated to 230°C , its vapour density is reduced to 62. The degree of dissociation of PCl_5 at this temperature will be :
 (1) 6.8% (2) 68% (3) 46% (4) 64%
62. The cause of diagonal relationship is
 (1) similar electronegativities
 (2) similar ionic or atomic radii
 (3) similar polarizing power of ions
 (4) all the three.
63. The atomic radii in case of inert gases is
 (1) ionic radii
 (2) covalent radii
 (3) van der Waals radii
 (4) none.
64. Which of the following combinations contains only isoelectronic ions?
 (1) N^{3-} , O^{2-} , Cl^- , Ne (2) F^- , Ar, S^{2-} , Cr.
 (3) P^{3-} , S^{2-} , Cl^- , Ar (4) N^{3-} , F^- , O^{2-} , Ar.
65. The ionic species having largest size is
 (1) $\text{Li}^+(g)$ (2) $\text{Na}^+(aq)$
 (3) $\text{Rb}^+(aq)$ (4) $\text{Li}^+(aq)$
66. The correct order of second ionization enthalpy of carbon, nitrogen, oxygen and fluorine is
 (1) $\text{C} > \text{O} > \text{F} > \text{N}$ (2) $\text{O} > \text{N} > \text{F} > \text{C}$
 (3) $\text{O} > \text{F} > \text{N} > \text{C}$ (4) $\text{F} > \text{O} > \text{N} > \text{C}$.
67. Which one of the following statements is incorrect?
 (1) Greater the nuclear charge, more negative is the electron gain enthalpy
 (2) Nitrogen has positive electron gain enthalpy
 (3) Electron gain enthalpy decreases from fluorine to iodine in the group
 (4) Chlorine has highest electron gain enthalpy with negative sign.

SPACE FOR ROUGH WORK

68. The ionization enthalpy and electron gain enthalpy of an element are 13.0 eV and 3.8 eV respectively. Its electronegativity on the Pauling scale is
(1) 4.0 (2) 3.5 (3) 3.0 (4) 2.8.
69. Which one of the following molecules has the smallest bond angle ?
(1) NH_3 (2) PH_3
(3) H_2Se (4) H_2S
70. Carbon suboxide (C_3O_2) has recently been shown as a component of the atmosphere of Venus. Which of the following formulation represents the correct ground state Lewis structure for carbon suboxide ?
(1) :O:C::C:C:O:
(2) :O::C::C:C::O:
(3) $\text{:}\ddot{\text{O}}::\text{C}::\text{C}::\text{C}::\ddot{\text{O}}:$
(4) O:C:C:C:O:
71. Number of sigma bonds in P_4O_{10} is
(1) 6 (2) 7 (3) 17 (4) 16
72. In compounds of the type ECl_3 , when $\text{E} = \text{B}, \text{P}, \text{As}$ or Bi , the angles Cl-E-Cl are
(1) $\text{B} > \text{P} = \text{As} = \text{Bi}$ (2) $\text{B} > \text{P} > \text{As} > \text{Bi}$
(3) $\text{B} < \text{P} = \text{As} = \text{Bi}$ (4) $\text{B} < \text{P} < \text{As} < \text{Bi}$
73. The dipole moment of LiH is found to be $20 \times 10^{-29} \text{ C m}$. If the interatomic distance in LiH is $1.6 \text{ \AA}$, then the percent ionic character of Li-H bond is nearly
(1) 80% (2) 60% (3) 50% (4) 40%
74. Two hybrid orbitals have a bond angle of 120° . The percentage of s character in the hybrid orbital is nearly
(1) 25% (2) 33% (3) 50% (4) 66%.
75. In which of the following molecule, S atom does not assume sp^3 hybridisation ?
(1) SO_4^{2-} (2) SF_4 (3) SF_2 (4) S_8
76. Which of the following are isoelectronic and iso-structural ?
 $\text{NO}_3^-, \text{CO}_3^{2-}, \text{ClO}_3^-, \text{SO}_3$
(1) $\text{NO}_3^-, \text{CO}_3^{2-}$ (2) $\text{SO}_3, \text{NO}_3^-$
(3) $\text{ClO}_3^-, \text{CO}_3^{2-}$ (4) $\text{CO}_3^{2-}, \text{SO}_3$
77. Specify the coordination geometry around and hybridisation of N and B atoms in a 1 : 1 complex of BF_3 and NH_3
(1) N : tetrahedral, sp^3 ; B : tetrahedral, sp^3
(2) N : pyramidal, sp^3 ; B : pyramidal, sp^3
(3) N : pyramidal, sp^3 ; B : planar, sp^2
(4) N : pyramidal, sp^3 ; B : tetrahedral, sp^3
78. The radius and charge of each of the six ions are shown below :
- | Ion | A^+ | B^+ | C^{2+} | X^- | Y^- | Z^{2-} |
|-----------|--------------|--------------|-----------------|--------------|--------------|-----------------|
| Radius/nm | 0.14 | 0.18 | 0.15 | 0.14 | 0.18 | 0.15 |
- The ionic solids AX , BY and CZ are of the same lattice type. What is the correct order of their lattice energies placing the one with the highest numerical value first ?
(1) $\text{AX} > \text{BY} > \text{CZ}$ (2) $\text{AX} > \text{CZ} > \text{BY}$
(3) $\text{BY} > \text{CZ} > \text{AX}$ (4) $\text{CZ} > \text{AX} > \text{BY}$
79. Shape and hybridisation of IF_5 respectively are
(1) Trigonal bipyramidal, sp^3d
(2) See saw, sp^3d
(3) Square pyramidal, sp^3d^2
(4) Pentagonal pyramidal, sp^3d^3
80. The percentage of p-character in the orbitals forming P-P bonds in P_4 is
(1) 25 (2) 33 (3) 50 (4) 75

SPACE FOR ROUGH WORK

81. The plant having capacity of absorbing water, used to replace cotton and used as a fuel is :-
 (1) *Marchantia* (2) *Riccia*
 (3) *Sphagnum* (4) *Funaria*
82. In which way, mosses affect the quality of soil?
 (1) Prevent soil erosion
 (2) Add nutrients to the soil
 (3) Promotes soil degradation
 (4) They do not affect soil in any way
83. In liverworts, asexual reproduction takes place by :-
 (1) gemmae and fragmentation of thalli
 (2) fragmentation and zoospores
 (3) gemmae formation and spores formation
 (4) isogamy and anisogamy
84. In a moss, the sporophyte :-
 (1) is partially parasitic on the gametophyte
 (2) produces gametes that give rise to the gametophyte
 (3) arises from a spore produced from the gametophyte
 (4) manufactures food for itself, as well as for the gametophyte
85. Which of the following pteridophytes belong to class-Pteropsida?
 (1) *Equisetum* and *Psilotum*
 (2) *Lycopodium* and *Adiantum*
 (3) *Selaginella* and *Pteris*
 (4) *Pteris* and *Adiantum*
86. In which of the following gametophyte is not independent free-living?
 (1) *Funaria* (2) *Marchantia*
 (3) *Pteris* (4) *Pinus*
87. Which of the following gymnosperms have coralloid roots associated with N_2 -fixing cyanobacteria?
 (1) *Pinus* (2) *Cycas*
 (3) *Cedrus* (4) *Ginkgo*

88. In the given diagram structure A, B and C sequentially represent :-

- (1) Antheridiophore, Rhizoids and Gemma cup
 (2) Archegoniophore, Gemma cup and Rhizoids
 (3) Sporophyte, Gemma cup and Thallus
 (4) Antheridiophore, Gemma cup and Rhizoids
89. Which is wrong option for given figure :-

- (1) A-Represent unicellular rhizoids of plant.
 (2) B-Represent rhizome of plant.
 (3) D-Represent reproductive structure of plant
 (4) C-Represent internode of plant
90. In gymnosperm the ovule is naked because :-
 (1) Ovary wall is absent
 (2) Integuments are absent
 (3) Perianth absent
 (4) Nucellus is absent

91. Match the following column Ist and column IInd :-

Column I st	Column II nd
A. Longest Gymnosperm	i. Ginkgo biloba
B. Longest Angiosperm	ii. Sequoia
C. Living fossil gymnosperm	iii. Rhynia
D. Smallest living pteridophyte	iv. Azolla
	v. Eucalyptus

- (1) A-ii, B-v, C-i, D-iv
(2) A-ii, B-v, C-iii, D-i
(3) A-ii, B-iv, C-i, D-iii
(4) A-iv, B-v, C-i, D-ii

92. Term horse tail relate with :-

- (1) Equisetum (2) Polytrichum
(3) Fern (4) Cycas

93. How many given members of fungi are include in basidiomycetes :-

- I. Colletotrichum II. Alternaria
III. Mucor IV. Ustilago
V. Agaricus VI. Puccinia
VII. Claviceps

- (1) 5 (2) 4 (3) 2 (4) 3

Column-I	Column-II
(A) Phycomycetes	(I) Sac fungi
(B) Ascomycetes	(II) Algal fungi
(C) Basidiomycetes	(III) Fungi imperfecti
(D) Deuteromycetes	(IV) Club fungi

The correct matching is :-

- (1) A-II B-I C-IV D-III
(2) A-II B-IV C-I D-III
(3) A-IV B-I C-II D-III
(4) A-IV B-III C-II D-I

95. Coenocytic, multinucleate and branched mycelial habit is found in :-

- (1) Basidiomycetes (2) Phycomycetes
(3) Ascomycetes (4) Deuteromycetes

Column-I	Column-II
(A) <i>Ulothrix</i>	(I) Unicellular
(B) <i>Spirogyra</i>	(II) Filamentous
(C) <i>Chlamydomonas</i>	(III) Colonial form
(D) <i>Volvox</i>	(IV) Kelps
(E) Some giant	

marine forms

Which combination is correct?

- (1) A-II B-II C-I D-III E-IV
(2) A-I B-II C-III D-IV E-IV
(3) A-IV B-IV C-III D-II E-I
(4) A-I B-I C-II D-III E-IV

97. Cone is found in :-

- (1) *Equisetum* (2) *Salvinia*
(3) *Selaginella* (4) Both (1) and (3)

98. The heterosporous pteridophytes are :-

- (1) *Lycopodium* and *Pteris*
(2) *Selaginella* and *Psilotum*
(3) *Selaginella* and *Salvinia*
(4) *Dryopteris* and *Adiantum*

99. Which one is correct about heterosporous pteridophytes?

- (1) Microspores and megaspores develop into the male and the female gametophytes, respectively
(2) The female gametophytes are retained on the parent sporophyte for variable period
(3) The development of the zygote into the embryo takes place within the female gametophyte
(4) All of these

100. Examine the figure A, B, C and D. In which one of the four options all the items A, B, C and D are correct?

	A	B	C	D
(1)	<i>Equisetum</i>	<i>Ginkgo</i>	<i>Selaginella</i>	<i>Lycopodium</i>
(2)	<i>Selaginella</i>	<i>Equisetum</i>	<i>Salvinia</i>	<i>Ginkgo</i>
(3)	<i>Funaria</i>	<i>Adiantum</i>	<i>Salvinia</i>	<i>Riccia</i>
(4)	<i>Chara</i>	<i>Marchantia</i>	<i>Fucus</i>	<i>Pinus</i>

- | | |
|--|---|
| <p>101. Which of the following lacks respiratory pigment in Blood ?
 (1) Earthworm (2) Cockroach
 (3) Rat (4) All of these</p> <p>102. In the evolution of animals a heart to pump the blood is found for the first time in
 (1) Annelids (2) Round worms
 (3) Arthropods (4) Flat worms</p> <p>103. Hermaphrodite animals are maximum in
 (1) Annelida (2) Mammals
 (3) Nematoda (4) Cnidarians</p> <p>104. Insects usually have pairs of wings.
 (1) One (2) Two
 (3) Three (4) Four</p> <p>105. A universal characteristic of insects is
 (1) Two pair of wings
 (2) Two pair of antennae
 (3) Compound eyes
 (4) Three pairs of thoracic legs</p> <p>106. Insects are
 (1) Ammonotelic
 (2) Uricotelic
 (3) Ureotelic
 (4) None above as they excrete only guanine</p> <p>107. The functional units of compound eye of an insect are called
 (1) Fenestrae (2) Ocelli
 (3) Radula (4) Ommatidia</p> <p>108. The heart of cockroach is
 (1) Myogenic
 (2) Neurogenic
 (3) Neuro-myogenic
 (4) None of the above</p> <p>109. One of the following character is not unique to phylum arthropoda
 (1) Chitinous exoskeleton
 (2) Jointed appendages
 (3) Malpighian tubules for excretion
 (4) Closed type of blood vascular system</p> | <p>110. In arthropods ecdysis is
 (1) Removal of exoskeleton to increase in size
 (2) Change in feeding habit from larva to adult
 (3) Finding proper mate
 (4) Retaining the shape from larva to adult</p> <p>111. A pygostyle bone is the
 (1) Part of pelvic girdle of Rabbit
 (2) Last caudal vertebra in birds
 (3) Part of skull of Frog
 (4) Last caudal vertebra of Frog</p> <p>112. Which one of the following statement is not true for cyclostomata ?
 (1) Living member of cyclostomata are parasite on true fish.
 (2) Cranium is bony
 (3) Paired fins are absent
 (4) They lack jaw</p> <p>113. In which one of the following all four sets of animals give birth to young ones ?
 (1) Kangaroo, Dolphin, Scorpion
 (2) Lion, Whale, Ostrich, Bat
 (3) Penguin, Bat, <i>Hippopotamus</i>, Platypus
 (4) Shrew, Bat, Cat, Frog</p> <p>114. Count the correct number of statements which are not related to the members of class chondrichthyes
 (a) terminal mouth
 (b) placoid scales on skin
 (c) presence of air bladder
 (d) poikilothermal
 (e) internal fertilization
 (f) vivipary
 (1) one (2) two
 (3) three (4) Four</p> |
|--|---|

115. Which of the following is not a trait of marsupials ?
- (1) Oviparous
 - (2) Presence of teats over mammary gland
 - (3) Presence of brood pouch
 - (4) All of the above
116. In the given list, how many animals are oviparous :-
- Neophron, Balaenoptera, Bufo, Naja, Pteropus, Scoliodon, Hippocampus, Felis, Corvus, Hemidactyles.*
- (1) 4
 - (2) 5
 - (3) 6
 - (4) 7
117. Osteichthyes can be differentiated from chondrichthyes externally by the presence of
- (1) Ventral mouth
 - (2) Lateral line system
 - (3) Terminal mouth
 - (4) Clasper
118. Which of the following is a true Amphibian ?
- (1) *Testudo*
 - (2) *Crocodylus*
 - (3) *Hyla*
 - (4) *Scoliodon*
119. Which of the following is not an example of fish ?
- (1) *Scoliodon*
 - (2) *Carcharodon*
 - (3) *Ichthyophis*
 - (4) *Clarius*
120. The most unique mammalian characteristic is the
- (1) Mammary glands
 - (2) Internal fertilisation
 - (3) Warm blooded
 - (4) Heart is four chambered

Direction for Assertion & Reason questions. These questions consist of two statements each, printed as assertion and reason. while answering these questions you are required to choose any one of the following four responses.

- (1) If both Assertion & Reason are true & the reason is a correct explanation of the Assertion.
- (2) If both Assertion & Reason are true but reason is not a correct explanation of the Assertion.
- (3) If Assertion is true but the Reason is false
- (4) If both Assertion & Reason are false

121. **Assertion :** Position of the centre of mass can lie outside the body also.

Reason : Centre of mass doesn't shift its position in the absence of an external force.

122. **Assertion :** When a rigid body rotates about any axis, then all the particles of it move in circles of different radii but with same angular velocity.

Reason : In rigid body relative position of particles are fixed.

123. **Assertion :** For the body to be in rotational equilibrium the net torque acting on the body about any point is zero.

Reason : For net torque to be zero, net force should also be zero.

124. **Assertion :** A rigid body can't be in a pure rolling on a rough inclined plane without giving any external force.

Reason : Since there is no torque providing force acting on the body in the above case, the body can't come in a rolling condition.

125. **Assertion :** When a ring moves in pure rolling condition on ground, it has 50% translational and 50% rotational energy.

$$\text{Reason : } \frac{KE_{\text{trans}}}{KE_{\text{rot}}} = \frac{\frac{1}{2}MV^2}{\frac{1}{2}I\omega^2} = \frac{\frac{1}{2}MV^2}{\frac{1}{2}(MR^2)\frac{V^2}{R^2}} = 1:1$$

- | | |
|--|--|
| <p>126. <i>Assertion</i> : If both the speed of a body and radius of its circular path are doubled, then centripetal force also gets doubled.
<i>Reason</i> : Centripetal force is directly proportional to both speed of a body and radius of circular path.</p> <p>127. <i>Assertion</i> : In circular motion, work done by centripetal force is zero.
<i>Reason</i> : In circular motion centripetal force is perpendicular to the displacement.</p> <p>128. <i>Assertion</i> : During a turn, the value of centripetal force should be less than the limiting frictional force.
<i>Reason</i> : The centripetal force is provided by the frictional force between the tyres and the road.</p> <p>129. <i>Assertion</i> : A safe turn by a cyclist should neither be fast nor sharp.
<i>Reason</i> : The bending angle from the vertical would decrease with increase in velocity.</p> <p>130. <i>Assertion</i> : Cream gets separated out of milk when it is churned, it is due to gravitational force.
<i>Reason</i> : In circular motion gravitational force is equal to centripetal force.</p> <p>131. <i>Assertion</i> : A coin is placed on phonogram turn table. The motor is started, coin moves along the moving table.
<i>Reason</i> : The rotating table is providing necessary centripetal force to the coin.</p> <p>132. <i>Assertion</i> : A person working on a horizontal road with a load on his head does no work.
<i>Reason</i> : No work is said to be done, if directions of force and displacement of load are perpendicular to each other.</p> <p>133. <i>Assertion</i> : The work done during a round trip is always zero.
<i>Reason</i> : No force is required to move a body in its round trip.</p> | <p>134. <i>Assertion</i> : When a gas is allowed to expand, work done by gas is positive.
<i>Reason</i> : Force due to gaseous pressure and displacement (of piston) are in the same direction.</p> <p>135. <i>Assertion</i> : A light body and heavy body have same momentum. Then they also have same kinetic energy.
<i>Reason</i> : Kinetic energy does not depend on mass of the body.</p> <p>136. <i>Assertion</i> : A spring has potential energy, both when it is compressed or stretched.
<i>Reason</i> : In compressing or stretching, work is done on the spring against the restoring force.</p> <p>137. <i>Assertion</i> : Comets move around the sun in elliptical orbits. The gravitational force on the comet due to sun is not normal to the comet's velocity but the work done by the gravitational force over every complete orbit of the comet is zero.
<i>Reason</i> : Gravitational force is a non conservative force.</p> <p>138. <i>Assertion</i> : The power of a pump which raises 100 kg of water in 10sec to a height of 100 m is 10 KW.
<i>Reason</i> : The practical unit of power is horse power.</p> <p>139. <i>Assertion</i> : According to law of conservation of mechanical energy change in potential energy is equal and opposite to the change in kinetic energy.
<i>Reason</i> : Mechanical energy is not a conserved quantity.</p> <p>140. <i>Assertion</i> : Mass and energy are not conserved separately, but are conserved as a single entity called mass-energy.
<i>Reason</i> : Mass and energy conservation can be obtained by Einstein equation for energy.</p> |
|--|--|

141. *Assertion* : The electronic configuration of nitrogen atom is represented as

and not as

Reason : The electronic configuration of the ground state of an atom is the one which has the greatest multiplicity.

142. *Assertion* : Bohr's orbits are called stationary orbits.

Reason : Electrons remain stationary in these orbits for some time.

143. *Assertion* : The two lobes of a p-orbital have opposite sign.

Reason : The two lobes of a p-orbital lie on the opposite sides of the nucleus.

144. *Assertion* : Schrodinger wave equation helps as to find the probability of the electron in any orbital at different points around the nucleus.

Reason : All the four quantum numbers are obtained by solving Schrodinger wave equation.

145. *Assertion* : The free gaseous Cr atom has six unpaired electrons.

Reason : Half-filled s-orbital has greater stability.

146. *Assertion* : The thermodynamic function which determines the spontaneity of a process is the free energy. For a process to be spontaneous, the change in free energy must be negative.

Reason : The change in free energy is related to the change in enthalpy and change in entropy. The change in entropy for a process must always be positive if it is spontaneous.

147. *Assertion* : Heat of neutralization of HF is more than that of HCl by NaOH.

Reason : HF is stronger acid than HCl.

148. *Assertion* : The entropy of the universe is continuously increasing.

Reason : All naturally occurring processes are accompanied by increase in entropy.

149. *Assertion* : Internal energy change in a cyclic process is always +ve (i.e., > 0).

Reason : Internal energy is a path function.

150. *Assertion* : The active mass of a pure solid or a pure liquid is taken as 1.

Reason : The active mass of a pure solid or a pure liquid depends upon the density and molecular mass of the substance both of which are constant for the pure substance.

151. *Assertion* : If an inert gas is added to a dissociation equilibrium keeping pressure constant, the dissociation increases.

Reason : Inert gas exerts its own pressure in the vessel.

152. *Assertion* : K_p can be equal to or less than or greater than K_c .

Reason : $K_p = K_c (RT)^{\Delta n_g}$. Thus, K_p and K_c depend upon temperature.

153. *Assertion* : If reaction quotient (Q_c) is less than the equilibrium constant (K_c), the equilibrium tends to shift in the direction of products.

Reason : The expression for equilibrium constant is different than the expression for reaction quotient.

154. *Assertion* : Na^+ and Al^{3+} are isoelectronic but the magnitude of the ionic radius of Al^{3+} is less than that of Na^+

Reason : The magnitude of the effective nuclear charge on the outer shell electrons in Al^{3+} is greater than that in Na^+ .

155. *Assertion* : The single bond dissociation energy of F—F is less than that of O—O.

Reason : Each F-atom in F—F has three lone pairs of electrons while each O atom in O—O has two lone pairs.

156. **Assertion** : All the P–F bonds in PF_5 do not have equal bond lengths.

Reason : The hybridisation of P-atom involves not only s and p-orbitals but also d-orbitals.

157. **Assertion** : PCl_5 is not very stable and easily dissociates to form PCl_3 and Cl_2 .

Reason : The central atom (P) in PCl_5 has 10 electrons around it instead of 8, i.e., it violates octet rule.

158. **Assertion** : The electronic structure of O_3 is

Reason :  structure is not allowed because octet around O cannot be expanded.

159. **Assertion** : Noble gases have highest ionization enthalpies in their respective periods.

Reason : Noble gases have stable closed shell electronic configuration.

160. **Assertion** : The electron gain enthalpy of N is +ve while that of P is –ve.

Reason : This is due to the smaller atomic size of N in which there is a considerable electron-electron repulsion and hence the additional electron is not accepted easily.

161. **Assertion** : Ascospores and basidiospores are haploid bodies.

Reason : Ascomycetes and basidiomycetes form fruiting bodies, ascocarp and basidiocarp which exhibit reduction division.

162. **Assertion** : Member of ascomycetes are commonly known as sac fungi.

Reason : Most of members of ascomycetes are multicellular, while rarely unicellular.

163. **Assertion** : Basidiospores are haploid spores.

Reason : Karyogamy and meiosis take place in basidium producing four haploid basidiospores exogenously.

164. **Assertion** : The plant body of bryophytes is like thallus and prostrate or erect, and attached to the substratum by unicellular or multicellular rhizoids.

Reason : They lack true root and stem, but have true leaves. They possess root and stem like structures.

165. **Assertion** : Bryophytic antherozoids fuses with egg to produce zygote.

Reason : Bryophytic antherozoids are released into water (zooidiogamy) where they are exposed to haploid egg of the diploid archegonia.

166. **Assertion** : The sporophyte of liverworts is differentiated into foot, seta and capsule.

Reason : In Riccia, sporophytes are represented by a capsule.

167. **Assertion** : In mosses, zygote develops into a sporophyte consisting of a foot, seta and capsule.

Reason : The sporophyte in liverworts is more elaborated than in mosses.

168. **Assertion** : In pteridophytes, the main plant body is sporophytic.

Reason : The plant body is well differential into true roots, leaves and stem.

169. **Assertion** : In gymnosperm, the pollen grains are released from microsporangium.

Reason : Similar to bryophytes and pteridophytes, the male and female gametophytes have a free-living independent existence in gymnosperms.

170. **Assertion** : Protonema directly develops from a spore.

Reason : Protonema is a creeping, green and branched and frequently filamentous stage.

171. <i>Assertion</i> : In cyclostomes spawning occurs in sea water. <i>Reason</i> : Cyclostomes are marine and their larva migrate to fresh water. 172. <i>Assertion</i> : Urochordates are connecting link between non- chordates and chordates. <i>Reason</i> : Notochord is found in urochordates only in tail of adults. 173. <i>Assertion</i> : The digestive system in many platyhelminthes is incomplete. <i>Reason</i> : In many platyhelminthes a single opening serves as both mouth and anus. 174. <i>Assertion</i> : Members of aschelminthes are pseudocoelomates. <i>Reason</i> : Body cavity is found in Aschelminthes but mesoderm is absent. 175. <i>Assertion</i> : Members of phylum Annelida and Arthropoda are similar according to body symmetry. <i>Reason</i> : Bilateral symmetry is found in all adult animals from platyhelminthes to chordata without exception.	176. <i>Assertion</i> : Koel is called brood parasitism. <i>Reason</i> : Koel lays its eggs in the nests of crow. 177. <i>Assertion</i> : Bat and Whales are mammals. <i>Reason</i> : They have 4 chambered heart. 178. <i>Assertion</i> : In the adult birds only the left ovary is well developed. <i>Reason</i> : A single ovary results in loss of weight that would help in flying. 179. <i>Assertion</i> : Retrogressive metamorphosis is seen in urochordates. <i>Reason</i> : In urochordates notochord is absent in larval stage, but is present in tail of adult. 180. <i>Assertion</i> : Insects have an oxygen carrying pigment called haemoglobin. <i>Reason</i> : Haemoglobin transport oxygen to tissues in insects.
